The authors propose in this paper a model for a document management system, describing, briefly, the document management system and the model concepts as well as the Unified Modeling Language characteristics. Finally, they are presented some more important diagrams of this language.

Key words: Model, Document Management System, UML, Class Diagram, Use Case Diagram

Introduction

Business processes streamlining and productivity increasing are fundamental concerns for any organization (private, public or non-profit) [10]. In an increasingly strict regulatory environment, the document and records management is one of the major objectives of any organization.

The electronic document management has represented a continuous concern for computer scientists from all over the world and has developed as an important activity in the document archiving and retrieving field in the dissemination centres. Although, almost all the documents from an organization are electronic documents, they can not be effectively used if they are not integrated into a management system. The present technologies, both hardware and software technologies, allow the presentation of the electronic document management concept in a new context, the collaboration and cooperative context in a knowledge based economy. The document management term is a part of a wider concept that covers the communication and knowledge management aspect of an organization [24].

The document management is an information system that allows the transfer, the storage and the retrieving of any electronic documents with connecting facilities with other information systems or electronic devices [1]. In the figure-1 it is presented the document management life cycle [18].

Fig. 1. Document management life cycle [18].

The electronic document and records management contains the capture, storage and retrieval of documents and records, potentially both paper and electronic, including workflow, content and knowledge management. The reality has proven that electronic documents and records are here to stay, at least for the foreseeable future. Every email is a record and every file is a source of information that carries a cost. Organizations avoid the challenge but they must accept the need to effectively manage their electronic documents [11].

A Constraint-based Object Model for Structured Document Management University of Michigan. Dept. of Electrical Engineering and Computer Science. Computer Science and Engineering Division, Anisoara Nica, Elke Angelika Rundensteiner, 1995 Abstract Complex multimedia document handling including the modeling decomposition and search across digital documents is one of the primary services that must be provided by digital library systems In this paper we present a general approach for handling structured documents e.g. SGML documents by exploiting object oriented database technology For this purpose we propose a constraint based object model capable of capturing in a uniform manner all SGML constructs typically used to encode the structural organization of complex documents We present a general strategy for mapping arbitrary document types e.g. article journal and book DTDs expressed using standard SGML into our model Most importantly we demonstrate that our model is designed to handle the integration of diverse document types into one integrated schema thus avoiding the generating of numerous redundant class definitions for similar document subtypes The resulting document management system DMS is thus capable of supporting the dynamic addition of new document types and of uniformly processing queries spanning across multiple document types In this paper we also describe the implementation of our approach on the commercial DBMS system Illustra to demonstrate that the ease with which our approach can be realized on current OODB technology without requiring any special purpose constructs Our DMS system provides support for integrated querying of both structural as well as content based predicates across arbitrarily complex document types

Reputation Capital Joachim Klewes, Robert Wreschniok, 2009-10-13 release reputation bearers from the burden of being constantly monitored and reduce the likelihood of government or public supervision and control strengthen client trust ease the recruitment and retention of capable employees and improve access to capital markets or attract investors legitimate positions of power and build up reserves of trust which lowed companies and politicians but also researchers and journalists to put their issues on the public agenda present them credibly and mould them in their own interests But a fear of loss is not the only reason for the steadily increasing portance of reputation in corporate management today or more especially in the minds of top management Rather the main reason is that corporate reputation has shifted from being an unquantifiable soft factor to a measurable indicator in the sense of management control And it is a variable that is obviously relevant to a company s performance recent studies by the European Centre for Reputation Studies and the Ludwig Maximilians Universit t of Munich compared the stock market performance of a port lio of the top 25% of reputation leaders based on regular reputation me urements in the wider public with that of the German DAX 30 stock m ket index The results show that a portfolio consisting of reputation leaders 1 outperformed the stock market index by up to 45% and with less risk Fig 1 Performance of reputation portfolios vs

Levers of Control Robert Simons, 1994-11-01 Based on a ten-year examination of control systems in over 50 U.S. businesses, this book broadens the definition of control and establishes a critical bridge between the disciplines of strategy and accounting and control. In addition to the more traditional diagnostic control systems, Simons identifies three new control systems: belief systems that communicate core values and provide inspiration and direction; boundary systems that frame the strategic domain and define the limits of freedom; and interactive systems that provide flexibility in adapting to competitive environments and encourage organizational learning. These four control systems, according to Simons, will provide managers with the basic levers for pursuing strategic objectives.

Tourism and the Environment Colin Hunter, Howard Green, 1995 This volume provides a research-based overview of the relationship between tourism development and environmental quality. The concept of sustainable tourism is examined as a prelude to a detailed treatment of the principles and implications of sustainable tourism development. The authors look at policy directions with new forms of alternative tourism analysed in this context. The volume then proceeds to consider the potential of land use planning and Environmental Impact Assessment systems as instruments in the translation of sustainable tourism development into practice. Conventional forms of interpretation are questioned and the efficacy and transferability of different systems are evaluated. Examples from around the world are used to illustrate the principles discussed. This volume will appeal to students and researchers in tourism as well as to professionals in the tourism industry.
