

My Career Plan: Mechanical Engineering

My goal and focus in school is to obtain a degree in Mechanical engineering. The Impact that mechanical engineering has on our society is huge, and believe it or not, affects everyone in their everyday lives. Mechanical Engineers are responsible for the design of many power-producing machines ranging from many different type of engines, electric generators, and even common structures such as elevators. The task given at hand is quite important, as many things revolve around these designs and work as a foundation to build upon. Think about all the buildings you enter as most of them have elevators you use from time to time; even huge staircases you use every day. These are all designed by mechanical engineers, so you could see the importance and the role they play in giving to the society. My plan B in my endeavors to succeed in school is to pursue a degree in Psychology. I have always been fascinated by psychology and the study of the mind. Learning about the mind and just how and why we do the things we do and think the way we do is always interesting to me. Clinical Psychologist have a crucial role in society, for a lot of them treat people for mental illness and help set up therapy. With these two career goals in mind, I have plans set for both of them. With mechanical engineering I would like to dive in to the field of Automotive design. I have grown to really like cars and how each car has its own unique aesthetic build/design. It seems to me that everyone wants to be more successful in their careers, and I think that an important stage is the initial choice of work. Undoubtedly this should be your dream job, for this I advise you to read the [article about "Golden Rules for Choosing a Dream Career"](#). I want to be able to work, improve, and design engines, accessories, and various vehicle structures. With Psychology, I would like to dive into the field of clinical therapy. Finding out and treating Mental illness is very important to the people

A Practical Essay on the Strength of Cast Iron, etc Thomas TREGOLD,1861

Thrown Among Strangers Douglas Monroy,1990-11-15 Every California schoolchild s first interaction with history begins with the missions and Indians It is the pastoralist image of course and it is a lasting one Children in elementary school hear how Father Serra and the priests brought civilization to the groveling lizard and acorn eating Indians of such communities as Yang na now Los Angeles So edified by history many of those children drag their parents to as many missions as they can Then there is the other side of the missions one that a mural decorating a savings and loan office in the San Fernando Valley first showed to me as a child On it a kindly priest holds a large cross over a kneeling Indian For some reason though the padre apparently aims not to bless the Indian but rather to bludgeon him with the emblem of Christianity This portrait too clings to the memory capturing the critical view of the missionization of California s indigenous inhabitants I carried the two childhood images with me both when I went to libraries as I researched

the missions and when I revisited several missions thirty years after those family trips In this work I proceed neither to dubunk nor to reconcile these contrary notions of the missions and Indians but to present a new and I hope deeper understanding of the complex interaction of the two antithetical cultures

The Fourth Industrial Revolution Klaus Schwab, 2017-01-03 World renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope, and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital, and biological worlds, the developments are affecting all disciplines, economies, industries, and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones, and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors, and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair, and the first transplant of a 3D printed liver are already in development. Imagine smart factories in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant and its ramifications more profound than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society, and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future, one in which technology empowers people rather than replaces them, progress serves society rather than disrupts it, and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.
