*Drawdown* Paul Hawken, 2017-04-18 New York Times bestseller The 100 most substantive solutions to reverse global warming based on meticulous research by leading scientists and policymakers around the world At this point in time the Drawdown book is exactly what is needed a credible conservative solution by solution narrative that we can do it Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis Reported by effects include increased determination and a sense of grounded hope Per Espen Stoknes Author What We Think About When We Try Not To Think About Global Warming There s been no real way for ordinary people to get an understanding of what they can do and what impact it can have There remains no single comprehensive reliable compendium of carbon reduction solutions across sectors At least until now The public is hungry for this kind of practical wisdom David Roberts Vox This is the ideal environmental sciences textbook only it is too interesting and inspiring to be called a textbook Peter Kareiva Director of the Institute of the Environment and Sustainability UCLA In the face of widespread fear and apathy an international coalition of researchers professionals and scientists have come together to offer a set of realistic and bold solutions to climate change One hundred techniques and practices are described here some are well known some you may have never heard of They range from clean energy to educating girls in lower income countries to land use practices that pull carbon out of the air The solutions exist are economically viable and communities throughout the world are currently enacting them with skill and determination If deployed collectively on a global scale over the next thirty years they represent a credible path forward not just to slow the earth s warming but to reach drawdown that point in time when greenhouse gases in the atmosphere peak and begin to decline These measures promise cascading benefits to human health security prosperity and well being giving us every reason to see this planetary crisis as an opportunity to create a just and livable world

*Ten Years to Midnight* Blair H. Sheppard, 2020-08-04 Shows how humans have brought us to the brink and how humanity can find solutions I urge people to read with humility and the daring to act Harpal Singh former Chair Save the Children India and former Vice Chair Save the Children International In conversations with people all over the world from government officials and business leaders to taxi drivers and schoolteachers Blair Sheppard global leader for strategy and leadership at PwC discovered they all had surprisingly similar concerns In this prescient and pragmatic book he and his team sum up these concerns in what they call the ADAPT framework Asymmetry of wealth Disruption wrought by the unexpected and often problematic consequences of technology Age disparities stresses caused by very young or very old populations in developed and emerging countries Polarization as a symptom of the breakdown in global and national consensus and loss of Trust in the institutions that underpin and stabilize society These concerns are in turn precipitating four crises a crisis of prosperity a crisis of technology a crisis of institutional legitimacy and a crisis of leadership Sheppard and his team analyze

the complex roots of these crises but they also offer solutions albeit often seemingly counterintuitive ones For example in an era of globalization we need to place a much greater emphasis on developing self sustaining local economies And as technology permeates our lives we need computer scientists and engineers conversant with sociology and psychology and poets who can code The authors argue persuasively that we have only a decade to make headway on these problems But if we tackle them now thoughtfully imaginatively creatively and energetically in ten years we could be looking at a dawn instead of darkness
