Gizmo Warm-up

Heredity is the passage of genetic information from parents to offspring. The rules of **inheritance** were discovered in the 19th century by Gregor Mendel. With the *Mouse Genetics (One Trait)* Gizmo™, you will study how one **trait**, or feature, is inherited.

1. Drag two black mice into the **Parent 1** and **Parent 2** boxes. Click **Breed** several times. What do the offspring look like?

[All of the offspring will have black fur.]

The appearance of each mouse is also called its **phenotype**.

2. Click **Clear**, and drag two white mice into the parent boxes. Click **Breed** several times. What is the phenotype of the offspring now? [All offspring are white furred.]

3. Do you think mouse offspring will always look like their parents? [Yes. But it will different ways the offspring will very from the parent.]

Explain: [For example if your mom has sharp ears and your dad has flat ears, you could get a mixture of both types of ears.]

<p>Activity A: Patterns of inheritance</p>	<p><u>Get the Gizmo ready:</u></p> <ul style="list-style-type: none"> • Click Clear. • Drag a black mouse and a white mouse into the parent boxes, but don't click Breed yet.

Cat Sense John Bradshaw, 2013-09-10 Cats have been popular household pets for thousands of years and their numbers only continue to rise Today there are three cats for every dog on the planet and yet cats remain more mysterious even to their most adoring

owners Unlike dogs cats evolved as solitary hunters and while many have learned to live alongside humans and even feel affection for us they still don't quite get us the way dogs do and perhaps they never will But cats have rich emotional lives that we need to respect and understand if they are to thrive in our company In *Cat Sense* renowned anthrozoologist John Bradshaw takes us further into the mind of the domestic cat than ever before using cutting edge scientific research to dispel the myths and explain the true nature of our feline friends Tracing the cat's evolution from lone predator to domesticated companion Bradshaw shows that although cats and humans have been living together for at least eight thousand years cats remain independent predatory and wary of contact with their own kind qualities that often clash with our modern lifestyles Cats still have three out of four paws firmly planted in the wild and within only a few generations can easily revert back to the independent way of life that was the exclusive preserve of their predecessors some 10 000 years ago Cats are astonishingly flexible and given the right environment they can adapt to a life of domesticity with their owners but to continue do so they will increasingly need our help If we're to live in harmony with our cats Bradshaw explains we first need to understand their inherited quirks understanding their body language keeping their environments however small sufficiently interesting and becoming more proactive in managing both their natural hunting instincts and their relationships with other cats A must read for any cat lover *Cat Sense* offers humane penetrating insights about the domestic cat that challenge our most basic assumptions and promise to dramatically improve our pets lives and ours [Essentials of Polymer Science and Engineering](#) Paul C. Painter, Michael M. Coleman, 2009 Written by two of the best known scientists in the field Paul C Painter and Michael M Coleman this unique text helps students as well as professionals in industry understand the science and appreciate the history of polymers Composed in a witty and accessible style the book presents a comprehensive account of polymer chemistry and related engineering concepts highly illustrated with worked problems and hundreds of clearly explained formulas In contrast to other books *Essentials* adds historical information about polymer science and scientists and shows how laboratory discoveries led to the development of modern plastics DEStech Publications web site
