Savvy criminal turned skilled Leviathan pilot Zara Cole finds new friends and clashes with bitter enemies in the second book of this action-packed series from New York Times bestselling authors Rachel Caine and Ann Aguirre that's perfect for fans of The 100 and The Fifth Wave. Zara Cole was a thief back on Earth, but she's been recently upgraded to intergalactic fugitive. On the run after a bloody battle in a covert war that she never expected to be fighting, Zara, her co-pilot Beatriz, and their Leviathan ship Nadim barely escaped the carnage with their lives. Now Zara and her crew of Honors need a safe haven, far from the creatures who want to annihilate them. But they'll have to settle for the Sliver: a wild, dangerous warren of alien criminals. The secrets of the Sliver may have the power to turn the tide of the war they left behind—but in the wrong direction. Soon Zara will have to make a choice: run from the ultimate evil—or stand and fight. An authorised reissue of the long out of print classic textbook, Advanced Calculus by the late Dr Lynn Loomis and Dr Shlomo Sternberg both of Harvard University has been a revered but hard to find textbook for the advanced calculus course for decades. This book is based on an honors course in advanced calculus that the authors gave in the 1960's. The foundational material, presented in the unstarred sections of Chapters 1 through 11, was normally covered, but different applications of this basic material were stressed from year to year, and the book therefore contains more material than was covered in any one year. It can accordingly be used (with omissions) as a text for a year's course in advanced calculus, or as a text for a three-semester introduction to analysis. The prerequisites are a good grounding in the calculus of one variable from a mathematically rigorous point of view, together with some acquaintance with linear algebra. The reader should be familiar with limit and continuity type

arguments and have a certain amount of mathematical sophistication. As possible introductory texts, we mention Differential and Integral Calculus by R Courant, Calculus by T Apostol, Calculus by M Spivak, and Pure Mathematics by G Hardy. The reader should also have some experience with partial derivatives. In overall plan the book divides roughly into a first half which develops the calculus (principally the differential calculus) in the setting of normed vector spaces, and a second half which deals with the calculus of differentiable manifolds. Contains a remedial mathematics program for grades K-5. 3 BOOKS IN 1!
