

headaches. We had two guitar journeymen and two music technology experts on the case and came away deciding the speaker-simulated, direct/headphone output is much less hassle for recording. Using a full-sized jack would make more sense though – mini jacks need adapters for guitar leads and that puts strain on the socket, so proceed with caution. If you do decide to go the USB route, the main speaker is muted with the headphone out active so you can monitor what you're playing.

Oh, and we should just mention that the master volume goes to 1.1. Well, it's three louder, isn't it?

#### Sounds: amp models

In general terms the amps differ as you might expect, sounding progressively bigger, more open and with more headroom as you

up the power rating. The surprise is the 15 which, despite its small cabinet and eight-inch speaker, manages not to sound like a milk.

While the modelled sounds don't feel or react much like the amps on which they're based, the sounds themselves are very good from a listener's perspective. The Dlx (Fender Deluxe) model sounds a little more mildly and gainy than the Twin (Fender Twin) model for example; the Rec (Mesa Dual Rectifier) has a more cascaded heavy gain and slight mid-scoop compared with the Plexi (Marshall Plexi) model, as you'd expect. To our ears the 6505 model is the pick of the high-gain models, perhaps not surprising as it's Peavey's number one rock amp. The best bit is that you can have all these sounds at micro-volumes. You can be Jimmy Page for a morning, while the neighbours

The little 15-watter easily has enough clout to let those neighbours know exactly what you're doing...

are none the wiser – try doing that with a Marshall Super Lead stack! Turned back up, the little 15-watter easily has enough clout to let those neighbours know exactly what you're doing, while the 75 will just about cut it with a normal two-piece, bass and drums band. The 30 doesn't have the projection to get through a spirited drummer, but for backing track-based and quieter gigs it'll do fine.

All three manage to hold on to their cleanest tones up to maximum volumes, which can be an odd experience if you're used to natural break up in an amp. If you want more break up, just select the next channel or model. It's all here and it's so Peavey's credit that the quality of the Vypyr's high and mid gain sounds are infinitely better than digital modelling's first serious attempts a decade or so ago. We should never take that for granted.

Like a lot of modelling amps that sound great at lower volumes, it's all too easy to overdo the bottom end at medium and higher levels. There's tons of bass so you need to dial a lot of it out to avoid a big woody mess at performance levels, especially with high gain sounds. And in that respect, ultimate, maximum gain metal does lose tightness and note definition at performance volumes, but it'd be a bit much to expect anything more of the notably open-backed cabinets and modest power ratings on offer here.

The 15- and 75-watt amps on review are very late-stage prototypes and suffer significant background hiss when the master is above three. The 30 is a full production model, however, and is pretty much silent; proof, Peavey tells us, that the noise issue is ironed out in amps destined for stores. A different kind of noise consideration is the somewhat aggressive noise reduction circuitry in the 75-watter that can cut in unceremoniously to decaying notes or light pick scratches. There's no such trouble on the 30 or 15, however, and nor will there be in amps destined for shops, according to Peavey.

#### Sounds: effects

The Vypyr's effects, both ampboxes and post-preamp effects, are generally excellent. A good start point is to try approximating famous tones, so selecting a Rock Phase and the red Plexi channel (or 6505 for that matter), for example, puts you immersed early in Van Halen mood. In that respect the world is your sonic oyster, whether it's Andy Summers-style delay and modulation, a bit of SRV rotary speaker, waxes surf shimmers or full-on Zakki Wylde shred, the Vypyr do the lot. Whether the TubeScreamer model, for example, sounds or feels ultimately like a good Bruce TS-9 or 808 is academic. What it does is give a swathe of mid-rich, sustaining
