6 pages | 1410 words

Architecture and the environment help to shape one another so they must be describe together. To build architecture constructors take from the environment but both architecture and the environment serve the people of the world. To fully understand the interactions of architecture, the environment, and the effects of each on human behavior one must view as variables of one whole.

The Impact Physical Structures Have on Human Behavior

It only takes visiting a beautiful place like a Maine coast light house, a Scottish castle, or a villa in Greece to feel the profound affects it has on ones mental condition. Worries are melted away and the soul is refreshed. Lighter or brighter spaces tend to increase alertness and even guard against depression. Rooms that are intended for relaxation should have dark colors with carpeting and few sharp edges. Low ceilings typically improve focus on detail-oriented tasks where conversely high ceilings increase creativity. Views of nature such as trees and open green spaces significantly inspire creativity, concentration, and memory. Clearly, it is significant to construct buildings that are sensitive to the needs of a user and should also compensate for ones inability to spend time outside. Certain human populations spend more time indoors than outdoors, which can have an unpropitious effect ones well being, health, and even comfort. This is why it is so important to create indoor environments that suit and meet ones basic needs (Pultar, 1997).

Architecture Directing Human Behavior

Architecture not only influences human action but can also help to direct that action. Research has proven that the way a person lives can affect their social interaction with others. One study showed those who live in apartments that were close to one another were less interested in social interaction surrounding them and had possession of limited space. The interest for knowing what was around them was not present nor the need to share who they are with others. Places of worship and places of work are perfect examples of how architecture can impact human behavior. Churches specifically use designs and furniture when building a church that will elicit the appropriate response when the congregation is attending. However, doing this the reverence of the God they want others to understand and know about is an exciting learning experience that the people want to continue to come back and worship at that church. (Bro & Popow, 2000)

Environmental Psychological Implications of Design

Everyone is impacted to some degree by building design, so it is to no ones surprise that the involvement of environmental psychology in design is enormous. The way ones surroundings are arranged can provide either possibilities or limitations. Therefore, when creating any kind of space, it is very significant to know for what and who will use it. It is important to know where to build, how much space will be needed, and its purpose. The building needs to be matched with his or her user so that the best functionality can be established while meeting certain criteria such as quality, safety, and performance. Environmental...

Research Culture in Architecture Cornelia Leopold, Christopher Robeller, Ulrike Weber, 2019-12-16 Research in and on architecture is as complex as the discipline itself with its different specialist fields and therefore the results often remain unconnected Research Culture in Architecture combines digital and analog research issues and demonstrates how important cross disciplinary cooperation in architecture is today The complexity and increasing specialization are elaborated on in the various chapters and then linked to the core of architecture i e design Scientists from the theoretical and practical fields present research results in the following subjects design methodology architectural space perception and the human body analog and digital timber construction visualization robotics architectural practice and research and sustainability

ARO: Architecture Research Office Stephen Cassell, Adam Yarinsky, Architecture Research Office, 2003-02-28 The process of investigation analysis and testing makes Architecture Research Office ARO as much a laboratory as a design firm For Stephen Cassell Adam Yarinsky and their team the starting point of each commission is not the development of an abstract idea for the project but an intensive hands on occupation with a project s conditions with its physical economic and social contexts This practical approach to making architecture to shrinking the distance between thinking and building is much evident in their work which manages to be simultaneously thoughtful and sensual The seven projects featured in this the first monograph on the work of this firm range from self directed research ARO s paper wall project to private living spaces the SoHo Loft to commercial interiors the Qiora Store and Spa to the popular U S Armed Services Recruiting Station in Times Square to the stunning Colorado House in Telluride All of these projects challenge design conventions while delighting the senses with their unusual materials careful detailing and unexpected spatial discoveries With essays by Stan Allen Philip Nobel Guy Nordenson and Sarah Whiting BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved

Design Research in Architecture Murray Fraser, 2021-07-28 What is the role of design research in the types of insight and knowledge that architects create That is the central question raised by this book It acts as the introductory overview for Ashgate s major new series Design Research in Architecture which has been created in order to establish a firm basis for this emerging field of investigation within architecture While there have been numerous architects scholars since the Renaissance who have relied upon the interplay of drawings models textual analysis intellectual ideas and cultural insights to scrutinise the discipline nonetheless until recently there has been a reluctance within architectural culture to acknowledge and accept the role of design research as part of the discourse However in many countries around the world one of the key changes in architecture and architectural education over the last decade has been the acceptance of design as a legitimate research area in its own right and this new series provides a forum where the best proponents of architectural design research can publish their work This volume provides a broad overview on design research that supports and amplifies the different volumes coming out in the book series It brings together leading architects and academics to discuss the more general issues involved in design research At the end there is an Indicative Bibliography which alludes to a long history of architectural books which can be seen as being in the spirit of design research

Yuri Avvakumov: Paper Architecture Yuri Avvakumov,2021-05-15 The traditions of paper architecture derive from French and Italian designs of the eighteenth century and avant garde projects produced in the Soviet Union in the 1920s and 1930s The latter were denounced at the time for their detachment from reality practice and ideology which made them unsuitable for promoting the building of socialism In the early 1980s a group of students at Moscow Architectural Institute found a way around the censor and began sending entries to Japanese ideas competitions They immediately started winning Yuri Avvakumov was one of the key figures in the paper architecture movement of the time and amassed a large collection of works by his friends and colleagues As well as an introductory essay by Avvakumov the book includes a selection of press cuttings many of which are translated to English for the first time Paper Architecture An Anthology was first published in Russian in 2019 It won The Art Newspaper Russia Book of the Year award

Biomimetic Research for Architecture and Building Construction Jan Knippers, Klaus G. Nickel, Thomas Speck, 2016-12-19 This book comprises a first survey of the Collaborative Research Center SFB TRR 141 Biological Design and Integrative Structures Analysis Simulation and Implementation in Architecture funded by the Deutsche Forschungsgemeinschaft since October 2014 The SFB TRR 141 provides a collaborative framework for architects and engineers from the University of Stuttgart biologists and physicists from the University of Freiburg and geoscientists and evolutionary biologists from the University of Tbingen The program is conceptualized as a dialogue between the disciplines and is based on the belief that that biomimetic research has the potential to lead everyone involved to new findings far beyond his individual reach During the last few decades computational methods have been introduced into all fields of science and technology In architecture they enable the geometric differentiation of building components and allow the fabrication of porous or fibre based materials with locally adjusted physical and chemical properties Recent developments in simulation technologies focus on multi scale models and the interplay of mechanical phenomena at various hierarchical levels In the natural sciences a multitude of quantitative methods covering diverse hierarchical levels have been introduced These advances in computational methods have opened a new era in biomimetics local differentiation at various scales the main feature of natural constructions can for the first time not only be analysed but to a certain extent also be transferred to building construction Computational methodologies enable the direct exchange of information between fields of science that until now have been widely separated As a result they lead to a new approach to biomimetic research which hopefully contributes to a more sustainable development in architecture and building construction
