Introduction to Robotics John J. Craig,2005 Written for senior level or first year graduate level robotics courses this text includes material from traditional mechanical engineering control theoretical material and computer science It includes coverage of rigid body transformations and forward and inverse positional kinematics

A Mathematical Introduction to Robotic Manipulation Richard M. Murray,2017-12-14 A Mathematical Introduction to Robotic Manipulation presents a mathematical formulation of the kinematics dynamics and control of robot manipulators It uses an elegant set of mathematical tools that emphasizes the geometry of robot motion and allows a large class of robotic manipulation problems to be analyzed within a unified framework The foundation of the book is a derivation of robot kinematics using the product of the exponentials formula The authors explore the kinematics of open chain manipulators and multifingered robot hands present an analysis of the dynamics and control of robot systems discuss the specification and control of internal forces and internal motions and address the implications of the nonholonomic nature of rolling contact are addressed as well The wealth of information numerous examples and exercises make A Mathematical Introduction to Robotic Manipulation valuable as both a reference for robotics researchers and a text for students in advanced robotics courses

Robotics, Vision and Control Peter Corke, 2011-09-05 The author has maintained two open source MATLAB Toolboxes for more than 10 years one for robotics and one for vision The key strength of the Toolboxes provide a set of tools that allow the user to work with real problems not trivial examples For the student the book makes the algorithms accessible the Toolbox code can be read to gain understanding and the examples illustrate how it can be used instant gratification in just a couple of lines of MATLAB code The code can also be the starting point for new work for researchers or students by writing programs based on Toolbox functions or modifying the Toolbox code itself The purpose of this book is to expand on the tutorial material provided with the toolboxes add many more examples and to weave this into a narrative that covers robotics and computer vision separately and together The author shows how complex problems can be decomposed and solved using just a few simple lines of code and hopefully to inspire up and coming researchers The topics covered are guided by the real problems observed over many years as a practitioner of both robotics and computer vision It is written in a light but informative style it is easy to read and absorb and includes a lot of Matlab examples and figures The book is a real walk through the fundamentals of robot kinematics dynamics and joint level control then camera models image processing feature extraction and epipolar geometry and bring it all together in a visual servo system Additional material is provided at <http://www.petercorke.com> RVC
