"The purpose of this manual is to provide the operator with information to implement a corrosion prevention program for his fleet"--Intro. Hydrostatic Testing, Corrosion, and Microbiologically Influenced Corrosion: A Field Manual for Control and

Prevention teaches industry professionals, managers, and researchers how to combat corrosion failure associated with hydrotesting. It discusses how a test liquid must be selected, how corrosion by bacteria should be controlled, and how to eliminate the risk of leakage. Rather than teaching how hydrotests should be conducted, it helps the reader evaluate the quality of a hydrotest that's already been conducted in terms of oxygen scavenger use, biocide testing, inhibitor addition, and water quality and explains the tasks that top and middle management must ensure are taken with respect to corrosion assessment of hydrotesting. The manual also discusses microbiologically influenced corrosion (MIC) as the main corrosion mechanism related to post-hydrotesting and offers essential knowledge on combating this corrosion process. In addition to being a manual for top and middle management on how to deal with corrosion, this book also: This manual of water supply practices explains the causes and prevention of external pipe corrosion. Third Edition. A working party report from the European Federation of Corrosion, the Corrosion Education Manual from 1992. INTRODUCTION. Cleaning is the first step in preventing aircraft corrosion and wear. Dirt, salt air deposits, and other contaminants can promote rapid corrosion and wear of aircraft surfaces, and can have an adverse impact on aircraft systems performance. Effective cleaning requires knowledge of the appropriate materials and methods needed to remove these contaminants. Section I contains general cleaning information, and Section II contains additional procedures for aircraft exposed to volcanic ash or sand/desert environments.
