

Fan Blades: Work at low temperature, lightweight titanium can be used

High Pressure Turbine Blades: Work at very high temperatures (1390 °C) Cooled nickel super-alloy must be used.

Compressor Blades: Work at moderate temperatures (490 °C) Titanium may be used.

Low Pressure Turbine Blades: These operate at a lower temperature (600 °C) but due to their large size should have as low a density as possible. Inter-metallic alloys of Titanium Aluminide are being developed for this role.

Soeder,1982 Experiments were conducted to determine the effects of steady state circumferential pressure distortion on inlet flow and internal engine performance of a high bypass ratio turbofan engine To measure these effects flow angle static pressure and total pressure instrumentation was placed between the rotatable distortion generator assembly and the engine inlet In addition both static pressure and total pressure were recorded at the fan exit and compressor inlet and exit Three circumferential screens were separately mounted on the rotatable assembly For all configurations data were recorded at each of twelve 30 deg increments of assembly rotation Experiments were conducted with fan speeds corrected to station 2 temperature of 80 or 90 percent of rated condition 7005 rpm and Reynolds number indices of 0.2 or 0.5 Yaw angle increased between the distortion generating assembly and the engine inlet A change in Reynolds number index RNI has only a slight effect and a change in speed had no effect on yaw angle distribution The flow angle was largest in the hub region of the engine inlet **Turbofan Engines-their Present and Future V.** Starostin,AEROSPACE TECHNOLOGY DIV LIBRARY OF CONGRESS WASHINGTON D C.,1966 The article describes a way of making turbofan engines by the use of well designed turbojet engines and discusses the efficiency of such a conversion The use of an afterburner in a turbofan engine permitting the use of these engines at high supersonic flight speeds is also discussed The author cites specific English and American aircraft now using turbofan engines A diagram of the X353 5 turbofan engine with a high by pass ratio is shown this engine is intended for the XV 5A VERTOL airplane Turbofan engines with afterburners are being mounted in test aircraft The author discusses performance of such engines Future tactical aircraft and the type of engine required for their missions are described Replacing of kerosene with liquid hydrogen is considered The importance of reducing the weight of engines in order to increase the capability of airplanes is stressed Author *Airframe and Powerplant Mechanics Airframe Handbook* United States.
