Earthquake-Induced Structural Pounding Robert Jankowski, Sayed Mahmoud, 2015-03-14 This book analyzes different approaches to modeling earthquake induced structural pounding and shows the results of the studies on collisions between buildings and between bridge segments during ground motions Aspects related to the mitigation of pounding effects as well as the design of structures prone to pounding are also discussed Earthquake induced structural pounding between insufficiently separated buildings and between bridge segments has been repeatedly observed during ground motions The reports after earthquakes indicate that it may result in limited local damage in the case of moderate seismic events or in considerable destruction or even the collapse of colliding structures during severe ground motions Pounding in buildings is usually caused by the differences in dynamic properties between structures which make them vibrate out of phase under seismic excitation In contrast in the case of longer bridge structures it is more often the seismic wave propagation effect that induces collisions between superstructure segments during earthquakes

The Orange Economy Inter American Development Bank, Iván Duque Márquez, Pedro Felipe Buitrago Restrepo, 2013-10-01 This manual has been designed and written with the purpose of introducing key concepts and areas of debate around the creative economy a valuable development opportunity that Latin America the Caribbean and the world at large cannot afford to miss The creative economy which we call the Orange Economy in this book you will see why encompasses the immense wealth of talent intellectual property interconnectedness and of course cultural heritage of the Latin American and Caribbean region and indeed every region At the end of this manual you will have the knowledge base necessary to understand and explain what the Orange Economy is and why it is so important You will also acquire the analytical tools needed to take better advantage of opportunities across the arts heritage media and creative services

The Oxford Handbook of Non-Synoptic Wind Storms Horia Hangan, Ahsan Kareem, 2021 Wind storms impact human lives their built as well as natural habitat During the last century society's vulnerability to wind storms has been reduced by enhanced knowledge of their impact and by controlling exposure through better design However only two of the wind systems have so far been considered in the design of buildings and structures i.e. synoptic winds resulting from macroscale weather systems spanning thousands of kilometers e.g. extratropical storms and mesoscale tropical storms spanning hundreds of kilometers and traveling fast e.g. hurricanes typhoons cyclones During the last two decades enough evidence has surfaced to support that a third type of very localized wind storms the non-synoptic winds are the most damaging in some regions of the world Thus far there are no design provisions established for the codification of these wind storms Their characterization in terms of climatology wind field and intensity frequency and occurrence as well as their impact on the built environment is slowly

developing This handbook presents the state of the art of knowledge related to all these features including their risk insurance issues and economics The research in this area is on the one hand more arduous given the reduced scale the three dimensionality and nonstationary aspects of these non synoptic winds while at the same time its understanding and modeling are being aided by the emergence of novel modeling and simulation techniques which are addressed in this handbook This will serve as a guiding resource for those interested in learning about and contributing to the advancement of the field

LaFave,2016-06-22 This collection focuses on the development of novel approaches to address one of the most pressing challenges of civil engineering namely the mitigation of natural hazards Numerous engineering books to date have focused

on and illustrate considerable progress toward mitigation of individual hazards earthquakes wind and so forth The current volume addresses concerns related to overall safety sustainability and resilience of the built environment when subject to multiple hazards natural disaster events that are concurrent and either correlated e g wind and surge uncorrelated e g earthquake and flood cascading e g fire following earthquake or uncorrelated and occurring at different times e g wind and earthquake The authors examine a range of specific topics including methodologies for vulnerability assessment of structures new techniques to reduce the system demands through control systems instrumentation monitoring and condition assessment of structures and foundations new techniques for repairing structures that have suffered damage during past events or for structures that have been found in need of strengthening development of new design provisions that consider multiple hazards as well as questions from law and the humanities relevant to the management of natural and human made hazards
