Rubin,2019-03-21 An up to date comprehensive treatment of a classic text on missing data in statistics The topic of missing data has gained considerable attention in recent decades This new edition by two acknowledged experts on the subject offers an up to date account of practical methodology for handling missing data problems Blending theory and application authors Roderick Little and Donald Rubin review historical approaches to the subject and describe simple methods for multivariate analysis with missing values They then provide a coherent theory for analysis of problems based on likelihoods derived from statistical models for the data and the missing data mechanism and then they apply the theory to a wide range of important missing data problems Statistical Analysis with Missing Data Third Edition starts by introducing readers to the subject and approaches toward solving it It looks at the patterns and mechanisms that create the missing data as well as a taxonomy of missing data It then goes on to examine missing data in experiments

before discussing complete case and available case analysis including weighting methods The new edition expands its coverage to include recent work on topics such as nonresponse in sample surveys causal inference diagnostic methods and sensitivity analysis among a host of other topics An updated classic written by renowned authorities on the subject Features over 150 exercises including many new ones Covers recent work on important methods like multiple imputation robust alternatives to weighting and Bayesian methods Revises previous topics based on past student feedback and class experience Contains an updated and expanded bibliography The authors were awarded The Karl Pearson Prize in 2017 by the International Statistical Institute for a research contribution that has had profound influence on statistical theory methodology or applications Their work has been no less than defining and transforming ISI

Only crucial equations are included In addition to updating throughout the new edition features  
New co author Debbie L Hahs Vaughn the 2007 recipient of the University of Central Florida's College of Education Excellence in Graduate Teaching Award  
A new chapter on logistic regression models for today's more complex methodologies  
More on computing confidence intervals and conducting power analyses using G Power  
Many more SPSS screenshots to assist with understanding how to navigate SPSS and annotated SPSS output to assist in the interpretation of results  
Extended sections on how to write up statistical results in APA format  
New learning tools including chapter opening vignettes outlines and a list of key concepts

33% new conceptual computational and all new interpretative problems  
A website that features PowerPoint slides answers to the even numbered problems and test items for instructors and for students  
the chapter outlines key concepts and datasets that can be used in SPSS and other packages and more  
Each chapter begins with an outline a list of key concepts and a vignette related to those concepts  
Realistic examples from education and the behavioral sciences illustrate those concepts  
Each example examines the procedures and assumptions and provides instructions for how to run SPSS including annotated output and tips to develop an APA style write up  
Useful tables of assumptions and the effects of their violation are included along with how to test assumptions in SPSS  
Stop and Think boxes provide helpful tips for better understanding the concepts  
Each chapter includes computational conceptual and interpretive problems  
The data sets used in the examples and problems are provided on the web  
Answers to the odd numbered problems are given in the book  
The first five chapters review descriptive statistics including ways of representing data graphically  
statistical measures the normal distribution and probability and sampling  
The remainder of the text covers inferential statistics involving means proportions variances and

correlations basic and advanced analysis of variance and regression models Topics not dealt with in other texts such as robust methods multiple comparison and nonparametric procedures and advanced ANOVA and multiple and logistic regression models are also reviewed Intended for one or two semester courses in statistics taught in education and or the behavioral sciences at the graduate and or advanced undergraduate level knowledge of statistics is not a prerequisite A rudimentary knowledge of algebra is required *Stats* Richard D.
