**Writing Children's Books For Dummies** Dec 17 2021 Everyone loves a children's book. And many dream about writing one. But is it actually possible for an unpublished writer—armed with a good story idea and a love of kids—to write, sell, publish, and promote a book? Yes, it is! Veteran children's book publishing executive and author Lisa Rojany Buccieri and author Peter Economy show you how, in their incredibly useful 2005 first edition of Writing Children's Books For Dummies®. Buccieri and Economy begin by explaining the basics of the children's book business, from the nuts and bolts of the various formats and genres—with helpful illustrations to aid you—to the intricacies of the book publishing market, a list of recent award-winning books, and a first peek into the particular mind set that writing children's books requires. (Hint: Throw out the adult rules, and think like a kid!) Then the authors dive into the actual writing process itself, with tips on setting up a workspace, brainstorming great book ideas, researching the subject you decide on, even speaking with the sorts of kids you hope will eventually read the book. They show you how to create compelling characters and develop them in the manuscript; how to outline and write a plot "arc" of conflict, change, and resolution; how to master the difficult art of writing dialogue; and how to use active (rather than passive) language to keep your story moving along and interesting to young minds. Or, if you're planning to write a creative nonfiction children's book—on a topic such as science, nature, or a historical figure, for example—the authors include a chapter on this, too. Ready, set, go... it's time to sit down and write! Once you've finished your book, however, the process has only begun. Now you will refine, submit, and hopefully sell your manuscript. Here again, the authors of Writing Children's Books For Dummies come through for you. They deliver solid advice on hiring an illustrator—or not; participating in workshops and conferences to learn the business and hone a story; finding an agent; and, finally, submitting the manuscript to publishers and—if you are successful—signing a contract. Along the way, the authors also include tips on handling rejection; a quick primer on the various editors in publishing houses (and how they work to make your book its best); and making a plan to publicize the book, including hiring a publicist if necessary. Like all For Dummies® books, Writing Children's Books For Dummies highlights "The Part of Tens," which includes the Ten Best Ways to Promote Your Story and More Than Ten Great Sources for Storylines. And the ever-helpful Cheat Sheet includes Tips for Editing your Children's Book Manuscript, Children's Book No-No's, Twelve Commandments for Writing Younger Children's Books, and Tips on Promotion. From setting down that first word on paper to doing a successful publicity tour, Writing Children's Books For Dummies gives you the confidence and the insiders' know-how to write and sell the story you've always wanted to write.

**Reinforcement Learning, second edition** Apr 08 2021 The significantly expanded and updated new edition of a widely used text on reinforcement learning, one of the most active research areas in artificial intelligence. Reinforcement learning, one of the most active research areas in artificial intelligence, is a computational approach to learning whereby an agent tries to maximize the total amount of reward it receives while interacting with a complex, uncertain environment. In Reinforcement Learning, Richard Sutton and Andrew Barto provide a clear and simple account of the field's key ideas and algorithms. This second edition has been significantly expanded and updated, presenting new topics and updating coverage of other topics. Like the first edition, this second edition focuses on core online learning algorithms, with the more mathematical material set off in shaded boxes. Part I covers as much of reinforcement learning as possible without going beyond the tabular case for which exact solutions can be found. Many algorithms presented in this part are new to the second edition, including UCB, Expected Sarsa, and Double Learning. Part II extends these ideas to function approximation, with new sections on such topics as artificial neural networks and the Fourier basis, and offers expanded treatment of off-policy learning and policy-gradient methods. Part III has new chapters on reinforcement learning's relationships to psychology and neuroscience, as well as an updated case-studies chapter including AlphaGo and AlphaGo Zero, Atari game playing, and IBM Watson's wagering strategy. The final chapter discusses the future societal impacts of reinforcement learning.
