A richly illustrated story of public transit in one of America's most historic cities, from public ferry and horse-drawn carriage to the MBTA. A lively tour of public transportation in Boston over the years, Boston in Transit maps the complete history of the modes of transportation that have kept the city moving and expanding since its founding in 1630—from the simple ferry serving an English settlement to the expansive

network of the Massachusetts Bay Transportation Authority, or MBTA. The story of public transit in Boston—once dubbed the Hub of the Universe—is a journey through the history of the American metropolis. With a remarkable collection of maps and architectural and engineering drawings at hand, Steven Beaucher launches his account from the landing where English colonists established that first ferry, carrying passengers between what is now Boston's North End and Charlestown—and sparing them what had been a two-day walk around Boston Harbor. In the 1700s, horse-drawn coaches appeared on the scene, connecting Boston and Cambridge, with the bigger, better Omnibus soon to follow. From horse-drawn coaches, horse-drawn railways evolved, making way for the electric streetcar networks that allowed the city's early suburbs to sprout—culminating in the multimodal, regional public transportation network in place in Boston today. With photographs, brochures, pamphlets,

guidebooks, timetables, and tickets, *Boston in Transit* creates a complete picture of the everyday experience of public transportation through the centuries. At once a practical reference, local history, and travelogue, this book will be cherished by armchair tourists, day-trippers, and serious travelers alike. Most arguments for a rediscovery of the body and the senses hinge on a critique of “visualism” in our globalized, technified society. This approach has led to a lack of actual research on the processes of visual “enskillment.” Providing a comprehensive spectrum of case studies in relevant contexts, this volume raises the issue of the rehabilitation of vision and contextualizes vision in the contemporary debate on the construction of local knowledge vs. the hegemony of the socio-technical network. By maintaining an ethnographic approach, the book provides practical examples that are both accessible to undergraduate students and informative for an academic audience. Did You

Know? In 1884 the Circle Line opened and was described in The Times as 'a form of mild torture which no person would undergo if he could conveniently help it.' According to one psychologist, Tube commuters can experience greater levels of stress than a police officer facing a rioting mob or even a fighter pilot going into a dogfight. Underground trains have only twice been used to transport deceased people in coffins: William Gladstone and Dr Barnardo. Some of the most bizarre items handed in to lost property include 250lb of sultanias, a 14ft canoe, a child's garden slide, a harpoon gun, a pith helmet, an artificial leg, someone's brother's ashes and a sealed box containing three dead bats. WITH well over a billion passengers a year, more than 250 miles of track, literally hundreds of different stations and a history stretching back at least 160 years, the world's oldest underground railway might seem familiar, but how well do you actually know it? This book offers a feast of Tube-based trivia for travellers

and lovers of London alike. `Of the many books on NLP, few deal with it specifically as psychotherapy and none so well as this one. All the usual strategies are there plus considerations on such matters as how the therapist benefits from using NLP, some excellent examples and case reports, written in a manner that is admirably suited to a professional readership. Top class' - NLP World Neuro-Linguistic Programming has evolved as an effective approach to therapeutic work which originated in the study of excellence in communication. With its focus on enabling clients to find their own solutions and achieving their full potential, NLP is of increasing interest to many counsellors and psychotherapists. Brief NLP Therapy provides a much-needed guide to the core concepts underpinning NLP practice. Each concept is explained clearly in terms of its theoretical and historical development and its practical application within brief therapy. Each chapter also features a `skill-builder' aimed at

helping the reader develop the therapeutic techniques which stem from the theory. The application of NLP skills is demonstrated throughout with examples selected from practice and by two extended case studies at the end of the book which draw together the themes developed throughout. Ian McDermott and Wendy Jago present NLP as an approach not only to therapeutic work, but to life in general. Brief NLP Therapy will resonate with the many therapists who are looking to enhance their practice, but who are also interested in developing their own personal efficacy in all arenas. Writings on the metropolis generally foreground illimitability, stressing thereby that the urban ultimately remains both illegible and unintelligible. Instead, the purpose of this interdisciplinary study is to demonstrate that mentality as a tool offers orientation in the urban realm. Nora Pleßke develops a model of urban mentality to be employed for cities worldwide. Against the background of the

Spatial Turn, she identifies dominant urban-specific structures of London mentality in contemporary London novels, such as Monica Ali's »Brick Lane«, J.G. Ballard's »Millennium People«, Nick Hornby's »A Long Way Down«, and Ian McEwan's »Saturday«. Presents a chronological overview of the history of cartography, from the earliest maps of prehistory to the engraved maps of the seventeenth century and beyond. Includes illustrations. This enlightening study employs the tools of archaeology to uncover a new historical perspective on the Underground Railroad. Unlike previous histories of the Underground Railroad, which have focused on frightened fugitive slaves and their benevolent abolitionist accomplices, Cheryl LaRoche focuses instead on free African American communities, the crucial help they provided to individuals fleeing slavery, and the terrain where those flights to freedom occurred. This study foregrounds several small, rural hamlets on the

treacherous southern edge of the free North in Illinois, Indiana, and Ohio. LaRoche demonstrates how landscape features such as waterways, iron forges, and caves played a key role in the conduct and effectiveness of the Underground Railroad. Rich in oral histories, maps, memoirs, and archaeological investigations, this examination of the "geography of resistance" tells the new powerful and inspiring story of African Americans ensuring their own liberation in the midst of oppression. Few transportation maps can boast the pedigree that London's iconic 'Tube' map can. Sported on t-shirts, keyrings, duvet covers, and most recently, downloaded an astonishing twenty million times in app form, the map remains a long-standing icon of British design and ingenuity. Hailed by the art and design community as a cultural artifact, it has also inspired other culturally important pieces of artwork, and in 2006 was voted second in BBC 2's Great British Design Test. But it almost

didn't make it out of the notepad it was designed in. The story of how the Underground map evolved is almost as troubled and fraught with complexities as the transport network it represents. Mapping the Underground was not for the faint-hearted - it rapidly became a source of frustration, and in some cases obsession - often driving its custodians to the point of distraction. The solution, when eventually found, would not only revolutionise the movement of people around the city but change the way we visualise London forever. Caroline Roope's wonderfully researched book casts the Underground in a new light, placing the world's most famous transit network and its even more famous map in its wider historical and cultural context, revealing the people not just behind the iconic map, but behind the Underground's artistic and architectural heritage. From pioneers to visionaries, disruptors to dissenters - the Underground has had them all - as well as a constant stream of (often disgruntled)

passengers. It is thanks to the legacy of a host of reformers that the Tube and the diagram that finally provided the key to understanding it, have endured as masterpieces of both engineering and design. *Location Awareness in the Age of Google Maps* explores the mundane act of navigating cities in the age of digital mapping infrastructures. Noone follows the frictions routing through Google Maps' categorising and classifying of spatial information. Complicating the assumption that digital maps distort a sense of direction, Noone argues that Google Maps' location awareness does more than just organise and orient a representation of space—it also organises and orients imaginaries of publicness, selfsufficiency, legibility, and error. At the same time, *Location Awareness in the Age of Google Maps* helps to animate the ordinary ways people are challenging and refusing Google Maps' vision of the world. Drawing on an arts-based field study spanning the streets of London, New York,

London, Toronto, and Amsterdam, Noone's encounters of "asking for directions" open up lines of inquiry and spatial scores that cut through Google's universal mapping project. *Location Awareness in the Age of Google Maps* will be essential reading for information studies and media studies scholars and students with an interest in embodied information practices, critical information studies, and critical data studies. The book will also appeal to an urban studies audience engaged in work on the digital city and the datafication of urban environments. The underground has been a dominant image of modern life since the late eighteenth century. A site of crisis, fascination, and hidden truth, the underground is a space at once more immediate and more threatening than the ordinary world above. In *Subterranean Cities*, David L. Pike explores the representation of underground space in the nineteenth and early twentieth centuries, a period during which technology and heavy industry transformed urban life. The

metropolis had long been considered a moral underworld of iniquity and dissolution. As the complex drainage systems, underground railways, utility tunnels, and storage vaults of the modern cityscape superseded the countryside of caverns and mines as the principal location of actual subterranean spaces, ancient and modern converged in a mythic space that was nevertheless rooted in the everyday life of the contemporary city. Writers and artists from Felix Nadar and Charles Baudelaire to Charles Dickens and Alice Meynell, Gustave Doré and Victor Hugo, George Gissing and Emile Zola, and Jules Verne and H. G. Wells integrated images of the urban underworld into their portrayals of the anatomy of modern society. Illustrated with photographs, movie stills, prints, engravings, paintings, cartoons, maps, and drawings of actual and imagined urban spaces, *Subterranean Cities* documents the emergence of a novel space in the subterranean obsessions and anxieties within nineteenth-century urban

culture. Chapters on the subways, sewers, and cemeteries of Paris and London provide a detailed analysis of these competing centers of urban modernity. A concluding chapter considers the enduring influence of these spaces on urban culture at the turn of the twenty-first century. This book offers a vision of the London Underground written in the form of a ficto-historical narrative, which combines history and fiction in the creation of a set of theoretical propositions for London's subterranean transportation network. Its amateur-scholar protagonist takes the reader on a labyrinthine journey into the world of research, with sources personified and their works appropriated and subverted. The book offers a model for practising writing and research in the context of architectural history and theory. Published in conjunction with TFL, this is a comprehensive guide to the London Underground, combining a historical overview, illustrations and newly commissioned photography. Taking the reader

on a wondrous journey through the invisible universe that surrounds us--a universe made visible by mathematics--Devlin shows us what keeps a jumbo jet in the air, explains how we can see and hear a football game on TV, and allows us to predict the weather, the behavior of the stock market, and the outcome of elections.

Microwave ovens, telephone cables, children's toys, pacemakers, automobiles, and computers--all operate on mathematical principles. Far from a dry and esoteric subject, mathematics is a rich and living part of our culture. Curated and designed by the experts at The London Transport Museum, this collection showcases London's 100 greatest transport design icons from the past 150 years. From TfL's exclusive Johnston font; Westminster Station's ground breaking architecture; Paolozzi's Tottenham Court Road Station mosaics; the classic S-Stock Underground train; Henry Beck's original tube map, and even Oxford Circus' 'Scramble Crossing', to the Black Cab, and the

Routemaster - old and new - London by Design delivers behind-the-scenes analysis of these iconic designs from industry experts, accompanied throughout by beautiful images, drawings, artwork and photography, from the London Transport Museum's archive. This beautiful book is a ideal for any art, architecture or design lover, as well as any passionate Londoner or tourist to our world-famous capital. The successful transmission of electrical power beneath the surface of the earth depends on a number of factors including ambient temperature, sheath bonding, cable laying depth, and especially the formation of dry zones around underground cables. Environmental Impacts on Underground Power Distribution studies the factors which affect the maximum current rating of subterranean power cables as well as various methods to maximize electrical current transmission. Focusing on the latest tools, methodologies, and research in the field, this publication is designed for use by electrical

engineers, academicians, researchers, and upper-level students. The whole world is mapped out for your viewing pleasure in this captivating compendium, ranging from past to present through diverse themes of transport and technology to discoveries and development. Covering the classical maps of the ancient world and traveling through time to reach Google Earth in the 21st century, this unprecedented history of more than 60 maps opens up our planet as never before. Great Maps showcases early Medieval maps like including mappae mundi; iconic transport maps such as the London Underground; important travel maps including Dr. Livingstone's version of Africa; maps of natural wonders such as the ocean floor; and momentous moments including the marks on the Moon left by the lunar landings. There are maps that show the way to heaven, depict lands with no sunshine, and the mysterious home of "the people with no bowels" on this mind-blowing journey. Much more than just

geographical data, maps are an accurate reflection of the culture and context of different time frames in history. British historian Jerry Brotton tells the amazing secret stories behind many of the most significant maps ever unearthed, revealing key features and innovative techniques in incredible detail. The unique insight into how mapmakers have expressed their world views results in this treasured book that makes a welcome addition to any bookshelf or home library. The Ubu film group, Australia's first experimental filmmakers and distributors. A reference for devotees of film, theatre, those interested in the arts, music and graphic design. This study explores how writers such as Charles Dickens, George Gissing, Bram Stoker and Mary Elizabeth Braddon negotiated the dirt and messiness of underground spaces and how, in spite of the transformation of London through underground sewers, underground From The Underground Busking in London CHAPTER 2 7 July 2005 London bombings How many people in

Japan know what “busking” means? In Britain, busking is “to earn money by singing or playing a musical instrument in public places,” and singers or players are called “buskers.” Busking has thrived in the London Underground for many years, and has become an established part of the music culture. It gives the travelling public a brief and transient moment to unwind and enjoy music; it is also a tourist attraction at the same time. However, with the modernisation of stations and the increasing number of passengers, busking caused some problems, such as noise, jeopardising passengers’ safety, disputes between buskers, etc. So in 2003 the London Underground Authority introduced a licensing system which requires that anyone wanting to be a busker must pass an audition. Luckily, I was the first Japanese to acquire an official busking licence. This book is a record of my busking between April and November 2005, but other occurrences and anecdotes that took place before those eight months are also

included. I hope you will enjoy the book - just like you enjoy listening to your favourite music time and time again! The diary of laughter with the tear of Mr. Domon who was busking in the same time at London Underground as the author "James Bowen" of the books "street cat named a bob". A 2022 Choice Reviews Outstanding Academic Title Spatial reasoning, which promises connection across wide areas, is itself ironically often not connected to other areas of knowledge. Thinking with Maps: Understanding the World through Spatialization addresses this problem, developing its argument through historical analysis and cross-disciplinary examples involving maps. The idea of maps here includes traditional cartographic representations of physical environments, but more broadly encompasses the wide variety of ways that visualizations are used across all disciplines to enable understanding, to generate new knowledge, and to effect change. The idea of thinking with maps is also used broadly. Maps

become, not simply one among many items to learn about, but indispensable tools for thinking across every field of inquiry, in a way similar to that of textual and mathematical language. Effective use of maps becomes a way to make knowledge, much as writing or mathematical exploration not only displays ideas, but also creates them. The book shows that maps for thinking are not just a means to improve geographic knowledge, as valuable as that may be. Instead, they provide mechanisms for rejuvenating our engagement with the world, helping us to become more capable of facing our global challenges. This book has a broader aim: It is fundamentally about general principles of how we learn and know. It calls for a renewed focus on democratic education in which both the means and ends are democratic. Education, just as the political realm, should follow Dewey's dictum that "democratic ends need democratic methods for their realization." Maps and mapping are invaluable in that endeavor. This

book contains 100 questions on the London, the capital city of England. London has a long and storied history and currently stands as one of the great cities of the world. Inside this book are questions about London's history, it's sports teams, it's inhabitants, it famous historical landmarks and state of the art skyscrapers and many other subjects. So test your knowledge on this amazing city. This book picks up where Ken Garland completed his work (Mr Beck's Underground Map, Capital Transport 1994) to take the story of the map from when Harry Beck's services were dispensed with, to the present day. Based upon extensive research of London Transport archives and at London's Transport Museum, this book surveys the major changes that have taken place over the years, and the reasoning and political background that led to them. Finalist for the 2022 Mythopoeic Scholarship Award for Myth and Fantasy Studies From the time of Charles Dickens, the imaginative power of the city of London has

frequently inspired writers to their most creative flights of fantasy. Charting a new history of London fantasy writing from the Victorian era to the 21st century, *Fairy Tales of London* explores a powerful tradition of urban fantasy distinct from the rural tales of writers such as J.R.R. Tolkien. Hadas Elber-Aviram traces this urban tradition from Dickens, through the scientific

romances of H.G. Wells, the anti-fantasies of George Orwell and Mervyn Peake to contemporary science fiction and fantasy writers such as Michael Moorcock, Neil Gaiman and China Miéville. Some chapters were previously published. THE TUBE AMP BOOK WITH AUDIO ONLINE ERRATA SHEET ADDED.
