The U.S. Army's role as an instrument of foreign policy is usually viewed in a strictly military sense. This book tells the story of an Army agency supporting national objectives in a different way. It traces the development of a major construction project, managed by the Army Corps of Engineers, that helped bring peace between two long-time antagonists in the Middle East, Israel and Egypt. The Corps has managed construction in support of American policy overseas many times, but this role is not widely known outside of the Corps. While telling the story of one of the more substantial, recent Corps of Engineers accomplishments, this book also speaks to the present and future. Large programs such as the air base construction mission in Israel demand broad vision from those who plan and execute them. Their management must be set up with a view to the evolution of the program through its entire life cycle and not extemporized as the program moves through predictable phases of start-up, expansion, maturity, completion, and closure. There are lessons here for thoughtful managers, in the Corps of Engineers and elsewhere in the Army, and we commend this book to them and to others interested in the diverse ways in which the Army serves as an agent of national policy. "Kreiser breathes new life into this most important of Union Army units. . . . A remarkably well-written and superbly researched account." —David E. Long, author of *The Jewel of Liberty: Abraham Lincoln's Re-election and the End of Slavery* Fair Oaks, the Seven Days, Antietam, Fredericksburg, Gettysburg, Cold Harbor, Petersburg—the list of significant battles fought by the Second Corps, Army of the Potomac, is a long and distinguished one. This absorbing history of the Second Corps follows the unit's creation and rise to prominence, the battles that earned it a reputation for hard fighting, and the legacy its veterans sought to maintain in the years after the Civil War. More than an account of battles, *Defeating Lee* gets to the heart of what motivated these men, why they fought so hard, and how they sustained a spirited defense of cause and country long after the guns had fallen silent. "[An] excellent contribution to Civil War history shelves." —Midwest Book Review "Lawrence Kreiser tells the Second Corps' story with verve and attention to personal as well as bureaucratic details." —Civil War Librarian This annual report presents a detailed account of the activities and achievements of the United States Army Corps of Engineers and the Mississippi River Commission during the year. The report covers a wide range of topics, including river and harbor improvements, flood control measures, and military construction projects. The book is an essential reference for engineers, policymakers, and anyone interested in the history of the US Army Corps of Engineers. This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work is in the "public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant. "Anyone who is interested in Hurricane Katrina, and in America's failing infrastructure, will want to read this book . . . a fast-paced narrative." —Scott G. Knowles, Drexel University 2020 Nautilus Silver Winner In the aftermath of one of the worst disasters in US history, *Words Whispered in Water* tells the story of one woman's fight, against all odds, to expose a mammoth federal agency—and win. In 2005, the entire world watched as a major US city was nearly wiped off the map. The levees ruptured and New Orleans drowned. But while newscasters attributed the New Orleans flood to "natural catastrophes" and other types of disasters, citizen investigator Sandy Rosenthal set out to expose the true culprit and compel the media and government to tell the truth. This is her story. When the protective steel flood-walls broke, the Army Corps of Engineers—with cooperation from big media—turned the blame elsewhere. In the chaotic aftermath, Rosenthal heroically exposes the federal agency's egregious design errors and changes the narrative surrounding the New Orleans flood. This engaging and revealing tale of man versus nature and man versus man is a horror story, a mystery, and David and Goliath story all in one. "Reveals what it takes to hold the powerful to account." —Publishers Weekly "There are only a few civilians that fight like real warriors. Sandy Rosenthal is one of them." —Russel L. Honoré, Lieutenant General, United States Army (Ret.) An overview of the many missions that the U.S. Army Corps of Engineers (CoE) have performed in support of the Army and the nation since the early days of the Amer. Revolution. This heavily illustrated history looks at the role of the CoE in times of war as well as in building projects in the U.S. and other nations. Includes chapters on explorations and surveys, lighthouses, hydropower development, flood control, waterway development, the Panama Canal, the environmental challenge, the Manhattan Project, the space program, and changing military responsibilities and relationships. Portraits and profiles of the CoE's highest ranking officers are also included. Product Description: This illustrated book highlights the U.S. Army Corps of Engineers' history from the battle of Bunker Hill to the war on terrorism; an introduction to aspects and events in engineer history. The Corps has a wealth of visual information—drawings, artwork, photographs, maps, plans, models—and this book contains a montage of historical images from the Revolutionary War to the present, in addition to many newly written articles. This new history also features an extensive index to aid in finding a specific subject, and researchers and interested individuals can be sure that they will find a solid historical perspective. The photographs taken by Charlotte T. McGraw, the official Women's Army Corps photographer during World War II, offer the single most comprehensive visual record of the approximately 140,000 women who served in the U.S. Army during the war. This collection of 150 of McGraw's photos includes pictures made in Africa, in England at the headquarters of the European Theater of Operations, in Asia and the Pacific, and in military hospitals in the United States. Serving from July 1942 to August 1946, Captain McGraw provided more than 73,000 photographs to the War Department Bureau of Public Affairs. Her photographs were published in the New York Times, New York Herald Tribune,

and used by the Associated Press and the United Press, as well as in recruiting posters, handouts and informational pamphlets, and in the most popular magazines of the era such as Time, Colliers, Women's Home Companion, Parade, Saturday Evening Post, and Mademoiselle. A Federal Corps at war against the Confederacy The Nineteenth Army Corps of the Union Army was comprised of the Federal troops allocated to the Department of the Gulf. It commenced active operations in 1863 first engaging the enemy at Fort Bisland and Irish Bend in Louisiana followed by the investment of Port Hudson. Thereafter it took part in Bank's Red River Expedition where it engaged at the Battles of Sabine Cross Roads and Pleasant Hill. In 1864 the 1st and 2nd Divisions transferred to Virginia and thence to Maryland where they served under Sherman in the Shenandoah Valley. The 19th also fought with distinction at Opequon, Fisher's Hill and Cedar Creek. Before the war was won it was engaged in further actions at Fort Blakely, Spanish Fort and Mobile. This is an essential unit history of an army corps during the American Civil war and provides much vital information for the student of the period. Available in soft cover and hard back with dust jacket. The U.S. Army Corps of Engineers (Corps) is responsible for construction, operations, and maintenance of much of the nation's water resources infrastructure. This infrastructure includes flood control levees, multi-purpose dams, locks, navigation channels, port and harbor facilities, and beach protection infrastructure. The Corps of Engineers also regulates the dredging and filling of wetlands subject to federal jurisdictions. Along with its programs for flood damage reduction and support of commercial navigation, ecosystem restoration was added as a primary Corps mission area in 1996. The National Research Council (NRC) Committee on U.S. Army Corps of Engineers on Water Resources Science, Engineering, and Planning was convened by the NRC at the request of the Corps of Engineers to provide independent advice to the Corps on an array of strategic and planning issues. National Water Resources Challenges Facing the U.S. Army Corps of Engineers surveys the key water resources challenges facing the Corps, the limits of what might be expected today from the Corps, and future prospects for the agency. This report presents several findings, but no recommendations, to the Corps of Engineers based on initial investigations and discussions with Corps leadership. National Water Resources Challenges Facing the U.S. Army Corps of Engineers can serve as a foundational resource for the Corps of Engineers, U.S. Congress, federal agencies, and Corps project co-sponsors, among others. After years out of print, this new and redesigned book brings back the best and most complete history of the Women's Army Corps. Loaded with history, tables, charts, statistics, photos, personalities, and many useful appendices (including a history of WAC uniforms), The Women's Army Corps, 1945-1978 is must reading for anyone who served those years in the Army as well as for those who want a complete history of the modern-day military. Author Bettie Morden served from 1942-1972 and she used her experience and access to people and records to compile the definitive reference work. Col. Morden is a graduate of the WAC Officers' Advanced Course (1962); Command and General Staff College (1964); and the Army Management School (1965). She has been awarded the Distinguished Service Medal, the Legion of Merit, the Joint Service Commendation Medal, and the Army Commendation Medal with Oak Leaf Cluster. An overview of the engineering projects undertaken by the U.S. Army Corps of Engineers from 1850-1984 along the Savannah River. Includes full color maps and photographs. The U.S. Army Corps of Engineers, St. Paul District, is one of fortyone districts in the Corps' organization. As the northernmost district in the Mississippi Valley Division, it centers on the headwaters of the Mississippi River and the uppermost section of the river's nine-foot navigation channel. The St. Paul District oversees civil works projects and conducts disaster relief within the geographic boundaries of the district, implements the Corps' regulatory program in the states of Minnesota and Wisconsin and assists with other Corps' missions wherever needed. The following history updates the book Creativity, Conflict & Controversy: A History of the St. Paul District, U.S. Army Corps of Engineers, published in 1979.1 This book describes how the St. Paul District responded to enormous changes in the Corps' missions and organization in the last quarter of the twentieth century.
