Published just four years ago, the Big Fat Notebooks—with nearly 4.6 million copies in print and sales escalating every year—revolutionized the study guide for middle schoolers. Now this lifesaving series is ready to graduate. Announcing the first two titles for high school students: Everything You Need to Ace Geometry in One Big Fat Notebook and

Everything You Need to Ace Chemistry in One Big Fat Notebook. Designed as the natural next step for the savvy students (and stressed parents) who made Math (over 1 million copies in print) and Science (over 1 million copies in print) the bestselling titles in the middle school series, these books offer a world of help for two of the tougher classes facing most high school sophomores, geometry and chemistry. Using the same formula that made the middle school series so successful, these new high school titles tackle difficult subjects in a lively, memorable, intuitive way. Critical ideas are broken down and clearly explained. Doodles illuminate tricky concepts. There are mnemonics for memorable shortcuts, and quizzes to recap it all. Geometry, written by high school math teacher extraordinaire Christy Needham, follows along with a year of geometry class, starting with the basics, like points, lines, planes, and angles, and progressing to the beginning of

trigonometry. Big Fat Notebooks are already helping millions of middle school students. Now high schoolers will enjoy and benefit from this kind of brilliant help—a set of notes, as if from the smartest kid in class, to help them study throughout the year, get ready for challenging exams, and know they have a source to turn to when they need to catch up on missed problems or understand the most difficult or confusing concepts. Geometry is hard. This book makes it easier. You do the math. This is the fourth title in the series designed to help high school and college students through a course they'd rather not be taking. A non-intimidating, easy-to-understand companion to their textbook, this book takes students through the standard curriculum of topics, including proofs, polygons, coordinates, topology, and much more. lessons stick. CliffsStudySolver Geometry is for students who want to reinforce their knowledge with a learn-by-doing approach. Asking Questions examines a central phenomenon of language - the use of sentences to ask questions. Although there is a sizable literature on the syntax and semantics of interrogatives, the logic of "questions", and the speech act of questioning, no one has tried

to put the syntax and semantics together with the speech acts over the full range of phenomena we pretheoretically think of as asking questions.

Robert Fiengo not only does this, but also takes up some more foundational issues in the theory of language. By positioning the findings of contemporary grammatical theorizing within the larger domain of language use, Fiengo challenges the use theorist to acknowledge the importance of grammatical form and the grammarian to acknowledge the importance of use. In addition to developing an Austinian distinction between four questioning speech-acts, and a proposal concerning the philosophy of language, Asking Questions contains a useful discussion of the type-token distinction and how use of language compares with use of other things.

Fiengo also considers the nature of multiple questions, revealing what one must know to ask them, and what speech acts one may perform when asking them. Asking Questions

advances our understanding of a wide range of issues in a number of important respects. Scholars and students of linguistics and philosophy will find plenty to interest them in this pioneering work. SAT Math Test Preparation through innovative "Private Tutor" Method. A customized, fast, complete, effective and affordable method to increase SAT math scores that has been tested successfully on all levels of high school students. Now available from Waveland Press, the Third Edition of Roads to Geometry is appropriate for several kinds of students. Pre-service teachers of geometry are provided with a thorough yet accessible treatment of plane geometry in a historical context. Mathematics majors will find its axiomatic development sufficiently rigorous to provide a foundation for further study in the areas of Euclidean and non-Euclidean geometry. By using the SMSG postulate set as a basis for the development of plane geometry, the authors avoid the pitfalls of many

"foundations of geometry" texts that encumber the reader with such a detailed development of preliminary results that many other substantive and elegant results are inaccessible in a one-semester course. At the end of each section is an ample collection of exercises of varying difficulty that provides problems that both extend and clarify results of that section, as well as problems that apply those results. At the end of chapters 3-7, a summary list of the new definitions and theorems of each chapter is included. These books are based on the latest NCERT syllabus. The language, terminology and the symbols used are student-friendly and easily understandable by the students. Ample emphasis has been given to explain various mathematical concepts correctly and with detailed explanations. All important results and formulae of each chapter have been provided at the end of each chapter for the convenience of students. SGN. The NIMCET-NIT MCA
