

A photograph of a deforested area. In the foreground, there is a large pile of cut logs and branches, some of which are charred. The ground is covered in dry, brownish debris. In the background, a dense forest of tall, thin trees stands against a clear sky. A large, rounded green text box is overlaid on the center of the image, containing the text "Deforestation Solutions" in white, bold, sans-serif font.

World Forests, Society and Environment Matti Palo, J. Uusivuori, 2012-12-06 This book addresses current global and regional issues concerning the world's forests, societies and the environment from an independent and non-governmental point of view. A main message is that cooperation on a global scale is not only commendable but essential if solutions to the problems facing the world's forests are to be found. To achieve this, modern science needs to find a clearer picture of relationships between forests, human activity and the environment and of the consequences of environmental change for the ability of societies to survive. Part I Editorial Perspectives is analyzing the ongoing globalization processes of forests, societies and the environment. Part II Society and Environment reviews worldwide trends with significance for the future of forests and forestry. While the trends are influenced by forest sector issues, that sector is influenced to a much larger extent by external factors such as demography, urbanization or technological development. Part III Importance of Forests looks at the value of the goods and services of forests, tangible and intangible, market and non-market and concludes that failure to recognize their full value is one of the crucial impediments to sustainable development. In Part IV Global Forum, scientists take up global forestry themes: deforestation, trade and the environment, climate change, biodiversity, with the aim of stimulating wider discussion. Part V Regional Forum looks at major themes of particular relevance to Africa, Asia, Pacific, Latin America, North America and Europe, such as farm and agroforestry, corruption and concessions, urban forestry and environmental conflicts. Part VI introduces the special theme forest sectors in transition economies. Teams of scientists from Russia and China focus on the implications of the transition from plan to market economy, illuminating both the very different nature of the forest sector in the two countries and the different transition paths that they have adopted. In the past millennium, the entire world has been discovered. In the past half century, the contribution of forests to the economy worldwide has been perceived, while only recently have their societal and environmental benefits been globally recognized. Globalization is a demanding process requiring knowledge and information. This book offers knowledge, facts and information, but also values from diverse human and cultural perspectives about world forests, society and environment to help us towards equity in our use of the global forest to create a clearer vision on a unassailable path. Nature-based Solutions for Resilient Ecosystems and Societies Shalini Dhyani, Anil Kumar Gupta, Madhav Karki, 2020-07-07 Over the past few decades, the frequency and severity of natural and human-induced disasters have increased across Asia. These disasters lead to substantial loss of life, livelihoods and community assets, which not only threatens the pace of socio-economic development but also undo hard-earned gains. World Bank,2009-11-19 Global warming and changes in climate will have severe and lasting impacts on national efforts to alleviate poverty and promote sustainable development Some of the world s poorest countries and communities are the most vulnerable and are already suffering the consequences Yet often these countries are rich in natural capital ecosystems and biodiversity that can contribute to solutions as they can to climate change Biodiversity is the foundation and mainstay of agriculture forests and fisheries Biological resources provide the raw materials for livelihoods agriculture medicines trade tourism and industry Forests grasslands freshwater and marine and other natural ecosystems provide a range of services often not recognized in national economic accounts but vital to human welfare regulating water flows and water quality flood control pollination decontamination carbon sequestration soil conservation and nutrient and hydrological cycling Current efforts to address climate change focus mainly on reducing emissions of greenhouse gases mainly through cleaner energy strategies and on attempting to reduce vulnerability of the communities at risk by improving infrastructure to meet new energy and water needs This book sets out a compelling argument for including ecosystem based approaches to mitigation and adaptation as a third essential pillar in national strategies to address climate change Such ecosystem based

strategies can offer cost effective proven and sustainable solutions contributing to and complementing other national and regional adaptation strategies

Aid on the Edge of Chaos Ben Ramalingam, 2013-10-24 It is widely recognised that the foreign aid system which today involves every country in the world is in need of drastic change But there are conflicting opinions as to what is needed Some call for dramatic increases in resources to meet long overdue commitments and to scale up what is already being done around the world Others point to the flaws in aid and bang the drum for cutting it altogether and argue that the fate of poor and vulnerable people be best placed in the hands of markets and the private sector Meanwhile growing numbers are suggesting that what is most needed is the creative innovative transformation of how aid works Aid on the Edge of Chaos is firmly in the third of these camps In this ground breaking book Ben Ramalingam shows that the linear mechanistic models and assumptions on which foreign aid is built would be more at home in early twentieth century factory floors than in the dynamic complex world we face today All around us we can see the costs and limitations of dealing economies and societies as if they are analogous to machines The reality is that such social systems have far more in common with ecosystems they are complex dynamic diverse and unpredictable Many thinkers and practitioners in science economics business and public policy have started to embrace more ecologically literate approaches to guide both thinking and action informed by ideas from the new science of complex adaptive systems Inspired by these efforts there is an emerging network of aid practitioners researchers and policy makers who are experimenting with complexity informed responses to development and humanitarian challenges This book showcases the insights experiences and often remarkable results from these efforts From transforming approaches to child malnutrition to rethinking processes of economic growth from building peace to combating desertification from rural Vietnam to urban Kenya Aid on the Edge of Chaos shows how embracing the ideas of complex systems thinking can help make foreign aid more relevant more appropriate more innovative and more catalytic Ramalingam argues that taking on these ideas will be a vital part of the transformation of aid from a post WW2 mechanism of resource transfer to a truly innovative and dynamic form of global cooperation fit for the twenty first century

The Regenerative Agriculture Solution André Leu, Ronnie Cummins, 2024-09-26 Read this book to understand why you should care about regenerative agriculture Until the public is better informed and insists on sweeping changes to current agricultural policy we will continue to degrade our planet and destabilize our climate Leu and Cummins through inspiring stories and solid science

show just how quickly we could turn that around Allan Savory president Savory Institute chairman Africa Centre for Holistic Management Is it possible that the solution to the global climate emergency lies in a waste agricultural product The best kept secret in today s world is that solutions to some of our most pressing issues food insecurity deforestation overgrazing water scarcity rural poverty forced migration lie in adopting improving and scaling up organic and regenerative agriculture best practices The Regenerative Agriculture Solution starts with the story of how two brothers Jose and Gilberto Flores are at the leading edge of this approach pioneering the use of the previously discarded leaves of the prodigious agave plant to regenerate agricultural soils reduce erosion and improve water capture When Ronnie Cummins the cofounder of Organic Consumer Association OCA and Regeneration International met the Flores brothers in 2019 and witnessed their revolutionary agave agroforestry system he knew they were onto something important Cummins had spent decades studying the potential and pitfalls of organic and regenerative agriculture and knew best practices when he saw them He started to write a book about Flores s brother and other visionary people such as Dr Vandana Shiva Allan Savory and John Liu who started landscape scale regeneration projects The scientific data was even more convincing suggesting that these projects and others like it could revolutionize how we understand the climate catastrophe Sadly Cummins passed away in April 2023 in the midst of working on the book Not to leave this work unfinished Ronnie s widow and OCA cofounder Rose called on their friend colleague and collaborator Regeneration International s cofounder Andr Leu to complete the work and place the Flores brothers breakthroughs in the broader context of regenerative agriculture solutions to the world s many interlocking ecological crises The result is The Regenerative Agriculture Solution a book that shows how regenerating our forests rangelands and farming ecosystems can cool our planet restore the climate and enrich our communities
