Multiple Sclerosis (MS) is an enigmatic immune mediated disease of the central nervous system that affects about 350,000 individuals in the US, and many more around the world. The mechanism of this disease is largely unknown and there is no cure for it. However, there are several well-characterized experimental animal models that help us understand and speculate about potential mechanisms of pathology in this disease. Many of the experimental therapies designed for this disease rely on testing the drugs in animal models before using it in clinical trials. This book combines for the first time the different experimental models for MS (including immune-mediated and viral) under one roof, and highlights aspects that are different or shared among these experimental models. It's aim is to improve our understanding of this devastating disease and help us think about potential additional therapies for it. This book explores the differences in cultural attributes and management factors to enable managers working for Japanese contractors to reduce misunderstandings and misinterpretations when communicating with project team members from different cultural backgrounds. It focuses on Japanese contractors operating in Singapore, since the Singapore construction industry has, for many years, been one of the largest overseas construction markets for the top-5 Japanese contractors. Using Hofstede's national cultural framework for the cultural studies in construction project management, it reveals various real-world management practices and discusses national cultural differences relating to managers working for Japanese contractors in Singapore as well as the communication weaknesses of current management practices and styles. The results presented provide useful lessons for Japanese contractors operating in Singapore, as well as other parts of the world, to bridge cultural and communication gaps. This book is open access under a CC BY license and explores the under-researched history of male mental illness from the mid-twentieth century. It argues that statistics suggesting women have been more vulnerable to depression and anxiety are misleading since they underplay a host of alternative presentations of 'distress' more common in men. The Adaptive Brain, II: Vision, Speech, Language, and Motor Control focuses on a unified theoretical analysis and predictions of important psychological and neurological data that illustrate the development of a true theory of mind and brain. The publication first elaborates on the quantized geometry of visual space and neural dynamics of form perception. Discussions focus on reflectance rivalry and spatial frequency detection, figure-ground separation by filling-in barriers, and disinhibitory propagation of functional scaling from boundaries to interiors. The text then takes a look at neural dynamics of perceptual grouping and brightness perception. Topics include simulation of a parametric binocular brightness study, smoothly varying luminance contours versus steps of luminance change, macrocircuit of processing stages, paradoxical percepts as probes of adaptive processes, and analysis of the Beck theory of textural segmentation. The book examines the neural dynamics of speech and language coding and word recognition and recall, including automatic activation and limited-capacity attention, a macrocircuit for the self-organization of recognition and recall, role of intra-list restructuring arid contextual associations, and temporal order information across item representations. The manuscript is a vital source of data for scientists and researchers interested in the development of a true theory of mind and brain. The SAGE Handbook of Marketing Ethics draws together an exhaustive overview of research into marketing's many ethical conundrums, while also promoting more optimistic perspectives on the ways in which ethics underpins organizational practices. Marketing ethics has emerged in recent years as the key and collective concern within the ever-divergent fields of marketing and consumer research. This handbook brings together a rich and diverse body of scholarly research, with chapters on all major topics relevant to the field of marketing ethics, whilst also outlining future research directions. PART 1: Foundations of Marketing Ethics PART 2: Theoretical and Research Approaches to Marketing Ethics PART 3: Marketing Ethics and Social Issues PART 4: Issues in Consumer Ethics PART 5: Ethical Issues in Specific Sectors PART 6: Ethical Issues in the Marketing Mix PART 7: Concluding Comments and Reflections Christian Theology: An Introduction, one of the most internationally-acclaimed Christian theology textbooks in use, has been completely rewritten for the 6th edition. It now features new and extended material and companion resources, ensuring it retains its reputation as the ideal introduction for students. A new edition of the bestselling Christian theology textbook to celebrate its 25th anniversary Rewritten throughout for exceptional clarity and accessibility, and adds substantial new material on the Holy Spirit Features increased coverage of postcolonial theology, and feminist theology, and prodigious development of world theology Increases the focus on contemporary theology to complement the excellent coverage of historical material A new 2-color design includes more pedagogical features including textboxes and sidebars to aid learning The Lagrangian approach had, in many respects, yielded significant success of theoretical physics in the centuries following its discovery. Unfortunately, the Lagrangian equations, in its original form, cannot be applied to living systems. For a time-independent Lagrangian, these equations are time-reversible and lead to energy conservation, which undoubtedly is not true for the living objects. In this book we show that natural (although rather unexpected) generalization of the Lagrangian enables directly use the apparatus of Lagrangian dynamics to describe behavior the living objects. It is, ultimately, not a revolutionary modification. Rather, lost opportunity that was not considered in the development of contemporary physics has been revisited. The main difference between living creatures and non-living things is that life actively counteracts its degradation in a continuously changing environment. Attempting to minimize the likelihood of death is a basic feature of living organisms. In this book, we assume that the best candidate for an indicator of proximity to death is stress, which is naturally related to the undesirable states of an organism. It will be shown that such an assumption facilitates the design of the generalized Lagrangians and that exploring even the lowest approximation of the Lagrangians allows for a reasonable description of a wide class of behavior of living beings, ranging from bacterial chemotaxis to homeostasis, dominance a hierarchy formation in the social groups and behavior of living being in environment. Although the book intendent, mainly, for young physicists and mathematicians, whose seek promising areas to apply their professional skills, experienced researchers would find here novel powerful theoretical apparatus for their investigation. A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in Scientific and technical aerospace reports (STAR) and International aerospace abstracts (IAA). Serious games provide a unique opportunity to fully engage students more than traditional teaching approaches. Understanding the best way to utilize these games and the concept of play in an educational setting is imperative for effective learning in the 21st century. Gamification in Education: Breakthroughs in Research and Practice is an innovative reference source for the latest academic material on the different approaches and issues faced in integrating games within curriculums. Highlighting a range of topics, such as learning through play, virtual worlds, and educational computer games, this publication is ideally designed for educators, administrators, software designers, and stakeholders in all levels of education. Vols. for 1931-include Bulletin of agricultural economics and sociology, Crop report and agricultural statistics, Bulletin of agricultural science and practice, International bulletin of plant protection. The collection of renowned entrepreneurship education researchers explores topics such as the theory of ideation, how to develop an expertise approach, how to reimagine entrepreneurship education to promote gender equality, how to activate an entrepreneurial mindset for neuro-diverse students, and more. The central theme, which

threads through the entire book, concerns computational modeling methods for water. Modeling results for pure liquid water, water near ions, water at interfaces, water in biological microsystems, and water under other types of perturbations such as laser fields are described. Connections are made throughout the book with statistical mechanical theoretical methods on the one hand and with experimental data on the other. The book is expected to be useful not only for theorists and computer analysts interested in the physical, chemical, biological and geophysical aspects of water, but also for experimentalists in these fields. This book discusses systematically treatment on the development of stochastic, statistical and state space models of the HIV epidemic and of HIV pathogenesis in HIV-infected individuals, and presents the applications of these models. The book is unique in several ways: (1) it uses stochastic difference and differential equations to present the stochastic models of the HIV epidemic and HIV pathogenesis; in this sense, the deterministic models are considered as special cases when the numbers of different type of people or cells are very large (2) it provides, a critical analysis of deterministic and statistical models in the literature; (3) it develops state space models by combining stochastic models and statistical models; and (4) it provides a detailed discussion on the pros and cons of the different modeling approaches. This book is the first to introduce state space models for the HIV epidemic. It is also the first to develop stochastic models and state space models for the HIV pathogenesis in HIV-infected individuals. Leasing of capital assets has become an important financing method, not only in the United States but in most West European countries as well. As a result, more and more often, practitioners and theorists are confronted with the lease-or-purchase issue. It may be rather difficult, however, to resolve this issue since there is a multitude of lease-or-purchase models that vary widely in assumed initial conditions, form, and content. In this book, I review and evaluate a number of these models, paying attention to financial leases as well as to operating leases. The models will be analyzed verbally, by means of a numerical example and utilizing uniform mathematical notation. After having discussed the theoretical achievements in this area, I investigate the reasons why preference is given to leasing in real-world situations and then look into any differences in legal provisions, income tax systems, and accounting regulations in various countries as they may affect the leasing of capital assets. Consequently, I feel that this book is a helpful instrument for both theorists and practitioners confronted with the lease-or purchase decision. Many people made valuable contributions toward developing this book, among others my colleagues of the Department of Business Finance of Erasmus University, Rotterdam. Besides, I am especially indebted to Professor Dr. A. I. Diepenhorst for his advice and suggestions, to an anonymous reviewer for helpful comments, and to Mrs. M. Leutscher-Van den Berg for her patient help in preparing the various versions of the manuscript. Throughout her career, Colette experimented with genre for the purposes of telling stories of her life. The books that resulted, known collectively as her 'livres-souvenirs', are far from being autobiographies in the customary sense. By addressing the need to reconsider the generic issues surrounding autobiographical story-telling, Anne Freadman's study brings the richness of 'the genre question' to the fore, shedding a fresh light on this much-loved body of work. From the vignettes of *La Maison de Claudine* to the note-books of *L'etoile vesper* and *Le Fanal bleu*, from stories of losing to stories of collecting, Colette's memory books take different narrative forms and explore the passing of time in different ways. This book investigates Colette's variegated generic choices as so many ways of 'telling time'. Nicolae Georgescu-Roegen (1906-1994) is considered today as perhaps the chief founder of the transdisciplinary field today known as Ecological Economics, but that he defined himself as Bioeconomics. In his later years Georgescu-Roegen intended to write a book of this title that would systematize what he considered to be the most significant results of his work. This project intends to resume this project, publishing a collection of the most relevant Georgescu-Roegen essays on Bioeconomics, including previously unpublished papers. Technological changes have often produced important social changes that translate into spatial and planning practice. Whereas the intelligent city is one of the unavoidable and even dominant concepts, digital uses can influence urban planning in four different directions. These scenarios are represented by a compass composed of a horizontal axis opposing institutional and non-institutional actors, and a second axis with open and closed opposition. Scholars and practitioners from management and design address the challenges and issues of designing business from a design perspective. *Designing Business and Management* combines practical models and grounded theories to improve organizations by design. For designing managers and managing designers, the book offers visual and conceptual models as well as theoretical concepts that connect the practice of designing with the activities of changing, organizing and managing. The book zooms in on designing beyond products and services. It focuses on designing businesses with a particular onus on social business and social entrepreneurship. *Designing Business and Management* contributes to and enhances the discourse between leading design and management scholars; offers a first outline of issues, concepts, practices, methods and principles that currently represent the body of knowledge pertaining to designing business, with a special focus on perceiving business as a social activity; and explores the practices of designing and managing, their commonalities, distinctions and boundaries. This book provides a thorough critical overview of the current debate on the ethics of war, as well as a modern just war theory that can give practical action-guidance by recognizing and explaining the moral force of widely accepted law. Traditionalist, Walzerian, and "revisionist" approaches have dominated contemporary debates about the classical *jus ad bellum* and *jus in bello* requirements in just war theory. In this book, Uwe Steinhoff corrects widely spread misinterpretations of these competing views and spells out the implications for the ethics of war. His approach is unique in that it complements the usual analysis in terms of self-defense with an emphasis on the importance of other justifications that are often lumped together under the heading of "lesser evil." It also draws on criminal law and legal scholarship, which has been largely ignored by just war theorists. Ultimately, Steinhoff rejects arguments in favor of "moral fundamentalism"—the view that the laws and customs of war must simply follow an immutable morality. In contrast, he argues that widely accepted laws and conventions of war are partly constitutive of the moral rules that apply in a conflict. *The Ethics of War and the Force of Law* will be of interest to scholars and advanced students working in just war theory, applied ethics, political philosophy, political theory, philosophy of law, and criminal and military law. "This book provides a framework, grounded in the International Coach Federation's eight core competencies, for understanding the coaching relationship and how it benefits the client. It helps the reader to understand the wide variety of applications of personal coaching and explains the change and coaching models that have evolved over decades"---
