Innovation and Marketing in the Video Game Industry David Wesley, Gloria Barczak, 2016-05-23 Video games have had a greater impact on our society than almost any other leisure activity. They not only consume a large portion of our free time, they influence cultural trends, drive microprocessor development, and help train pilots and soldiers. Now with the Nintendo Wii and DS, they are helping people stay fit, facilitating rehabilitation, and creating new learning opportunities. Innovation has played a major role in the long-term success of the video game industry as software developers and hardware engineers attempt to design products that meet the needs of ever-widening segments of the population. At the same time, companies with the most advanced products are often proving to be less successful than their competitors. *Innovation and Marketing in the Video Game Industry* identifies patterns that will help engineers, developers, and marketing executives to formulate better business strategies and successfully bring new products to market. Readers will also discover how some video game companies are challenging normal industry rules by using radical innovations to attract new customers. Finally, this revealing book sheds light on why some innovations have attracted legions of followers among populations that have never before been viewed as gamers, including parents and senior citizens, and how video games have come to be used in a variety of socially beneficial ways. David Wesley and Gloria Barczak's comparison of product features, marketing strategies, and the supply chain will appeal to marketing professionals, business managers, and product design engineers in technology-intensive industries, to government officials who are under increasing pressure to understand and regulate video games, and to anyone who wants to understand the inner workings of one of the most important industries to emerge in modern times. In addition, as video games become an ever more pervasive aspect of media entertainment, managers from companies of all stripes need to understand video gaming as a way to reach potential customers.

Considering that Microsoft is a very aggressive and well financially equipped company, therefore one of the most successful in the world, you can expect a major showdown. But what will happen to the customer who should be the driving force of the marketing effort of those players?

Decoding China's Export Miracle: A Global Value Chain Analysis Yuqing Xing,2021-03-17 In less than three decades China has emerged as the world's largest exporting nation with more than 2 trillion exports annually. China's quick rise as a leading exporter in the world is an unprecedented miracle. There are many theories explaining this miracle. This book adopts the global value chain (GVC) approach to analyze the Chinese export miracle over the last four decades. It focuses on the tasks rather than the gross export value and emphasizes the organizations of modern trade rather than the national comparative advantage. The GVC approach systematically explains how in less than four decades China has evolved from a closed economy to the world's No. 1 exporting nation, why China, a developing country, has exported more high technology products than labor-intensive products to the US, and why almost half of the US trade deficit has originated from China. The book identifies three spillover effects of GVCs that originated from brands, technology, and product innovation, and distribution and retail networks of GVCs lead firms. It argues that China's deep integration with GVCs has been a decisive factor for China's emergence as the world's No. 1 exporting nation and the champion of high technology exports. In addition, this book uses iPhone trade and the operation of Apple, the largest factory-less American manufacturer, to explain how current trade statistics exaggerate China's exports to and its trade surplus with the US on the one hand, and underestimate US exports on the other hand. By using the experience of the Chinese mobile phone industry, the book argues that the GVC strategy can be a short cut for developing countries to achieve industrialization and enable firms of developing countries to enter high technology sectors despite their intrinsic disadvantages. At this end, the book also discusses the future trajectory of China-centered GVCs under the shadow of the US-China trade war and the COVID-19 pandemic.
