Humidification in the Intensive Care Unit Antonio M. Esquinas, 2012-01-05 Inadequate humidification of inspired gases can cause a variety of serious problems and humidification has accordingly become an important aspect of modern intensive care medicine This book is designed to serve as a practical guide for clinicians providing information on the theoretical background of humidification the equipment and

its optimal use The book starts by examining the physiological basis of humidification Current devices are then discussed with careful attention to factors influencing their performance and methods to evaluate their effectiveness The two scenarios of mechanical and non mechanical ventilation are considered and the issue of ventilator associated pneumonia is addressed in detail Further chapters focus on such topics as humidification following tracheostomy humidification of the artificial airway during secretion management measurement of inspired gas temperature in the ventilated neonate and humidification in the home care setting

Assessment of Fuel Economy Technologies for Light-Duty Vehicles National Research Council, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee on the Assessment of Technologies for Improving Light-Duty Vehicle Fuel Economy, 2011-06-03 Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars sport utility vehicles minivans and other light duty vehicles without compromising vehicle performance or safety Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines spark ignition gasoline compression ignition diesel and hybrid According to its estimates adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark ignition engines could reduce fuel consumption by 29 percent at an additional cost of 2 200 to the consumer Replacing spark ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately 5 900 per vehicle and replacing spark ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of 6 000 per vehicle The book focuses on fuel consumption the amount of fuel consumed in a given driving distance because energy savings are directly related to the amount of fuel used In contrast fuel economy measures how far a vehicle will travel with a gallon of fuel Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information
