Lunar Reconnaissance Orbiter Mission R.R. Vondrak, J.W. Keller, 2014-11-22. The Lunar Reconnaissance Orbiter (LRO) was successfully launched on June 18, 2009 and joined an international fleet of satellites. Japan's SELENE (Kaguya), China's Chang'E, and India's Chandrayaan-1 that have recently orbited the Moon for scientific exploration purposes. LRO is the first step to fulfill the US national space goal to return humans to the Moon's surface, which is a primary objective of NASA's Exploration Systems Mission Directorate (ESMD). The initial LRO mission phase has a one-year duration, fully funded under ESMD support. LRO is expected to have an extended phase of operations for at least two additional years to undertake further lunar science measurements that are directly linked to objectives outlined in the National Academy of Sciences report on the Scientific Context for Exploration of the Moon (SCEM). All data from LRO will be deposited in the Planetary Data System (PDS) archive so as to be usable for both exploration and science by the widest possible community.

A NASA Announcement of Opportunity (AO) solicited proposals for LRO instruments with associated exploration measurement investigations. A rigorous evaluation process involving scientific peer review in combination with technical cost and management risk assessments recommended six instruments for LRO development and deployment. The competitively selected instruments are: Cosmic Ray Telescope for the Effects of Radiation (CRATER), Diviner Lunar Radiometer Experiment (DLRE), Lyman Alpha Mapping Project (LAMP), Lunar Exploration Neutron Detector (LEND), Lunar Orbiter Laser Ranging (LOLA), and Lunar Reconnaissance Orbiter Camera (LROC).

Remote Sensing of the Aquatic Environments Giacomo De Carolis, Francesca de Santi, 2021-11-22. The book highlights recent research efforts in the monitoring of aquatic districts with remote sensing observations and proximal sensing technology integrated with laboratory measurements. Optical satellite imagery gathered at spatial resolutions down to few meters has been used for quantitative estimations of harmful algal bloom extent and chlorophyll-a (Chl-a) mapping, as well as winds and currents from Synthetic Aperture Radar (SAR) acquisitions. The knowledge and understanding gained from this book can be used for the sustainable management of bodies of water across our planet.

Environmental Geomorphology Mario Panizza, M. Panizza, 1996-11-20 Geomorphology has now reached a certain level where the methodology scientific content and results being published in the field make it worthy of being considered as a major environmental research area. In preparing Environmental Geomorphology the author has given priority to methodology and illustrative case histories. Schemes and classifications that would be ill suited for a naturalistic empirical and non systematic discipline like geomorphology have been avoided. The concepts outlined in the text are based on a subdivision of geomorphological resources and hazards as well as their links with man together with the consequent risk and impact problems. Each investigation study or intervention concerning the environment cannot ignore either the human context in which it occurs or man's history and prospects. It is necessary to have the right dialogue and relationship with the other disciplines making up this system so as to apply the most suitable methodologies and offer the most valid solutions. For some subjects covered in the book specialists concerned with a particular section of environmental geomorphology were consulted. The text of each chapter is accompanied by several illustrative schemes, figures and photographs derived from real research and professional experiences. The volume is addressed both to university students studying topics of geomorphology as part of their syllabus and to researchers and consultants: geologists, geographers, engineers, naturalists etc. working in the field.
