If America has a claim to exceptionalism, American Credo locates it in a little understood ability to engage in deep conflicts over political ideas, while at the same time reducing adversarial positions to legitimate derivatives of American history and development. The user-friendly format enables students to confidently navigate through the key science topics as they prepare to successfully take standardized tests. Each of the nine consumable student books in this series contains concise two-page lessons with concept reviews, multiple-choice items, and constructed responses for writing practice. The questions emphasize essential skills such as data analysis, interpretation of science diagrams, and reading comprehension. A separate Answer Key is provided. Reading Level: 6-9 Interest Level: 6-12 This comprehensive full-year program introduces students to the basic concepts and principles of biology and builds the fundamental science skills students of all ability levels need to succeed. Pacemaker Biology integrates technology, everyday applications, careers, and modern leaders into biology. Lexile Level 760 Reading Level 3-4 Interest Level 6-12 Motivate students to read and think critically as they build science content knowledge This economical, high-interest series grabs students' attention with science content in a concise, approachable format. Reading Level: 5-7 Interest Level: 6-9 This program presents science concepts in areas of biology, earth science, chemistry, and physical science in a logical, easy-to-follow design that challenges without overwhelming. This flexible program

consists of 12 student texts that can easily supplement an existing science curriculum or be used as a stand-alone course. Reading Level: 4-5 Interest Level: 6-12 From the best-selling author of Gratitude, On the Move, and Musicophilia, a collection of essays that displays Oliver Sacks's passionate engagement with the most compelling and seminal ideas of human endeavor: evolution, creativity, memory, time, consciousness, and experience. Oliver Sacks, a scientist and a storyteller, is beloved by readers for the extraordinary neurological case histories (Awakenings, An Anthropologist on Mars) in which he introduced and explored many now familiar disorders--autism, Tourette's syndrome, face blindness, savant syndrome. He was also a memoirist who wrote with honesty and humor about the remarkable and strange encounters and experiences that shaped him (Uncle Tungsten, On the Move, Gratitude). Sacks, an Oxford-educated polymath, had a deep familiarity not only with literature and medicine but with botany, animal anatomy, chemistry, the history of science, philosophy, and psychology. The River of Consciousness is one of two books Sacks was working on up to his death, and it reveals his ability to make unexpected connections, his sheer joy in knowledge, and his unceasing, timeless project to understand what makes us human. This book explains how field research contributes value to political science by exploring scholars' experiences, detailing exemplary practices, and asserting key principles. When Oliver Sacks was twelve years old, a perceptive schoolmaster wrote in his report: "Sacks will go far, if he does not go too far." It is now abundantly clear that Sacks has never stopped going. From its opening pages on his youthful obsession with motorcycles and speed, On the Move is infused with his restless energy. As he recounts his experiences as a young neurologist in the early 1960s, first in California, where he struggled with drug addiction, and then in New York, where he discovered a long-forgotten illness in the back wards of a chronic hospital, we see how his engagement with patients comes to define his life. With unbridled honesty and humor, Sacks shows us that the same energy that drives his physical passions—weight lifting and swimming—also drives his cerebral passions. He writes about his love affairs, both romantic and intellectual; his guilt over leaving his family to come to America; his bond with his schizophrenic brother; and the writers and scientists—Thom Gunn, A. R. Luria, W. H. Auden, Gerald M. Edelman, Francis Crick—who influenced him. On the Move is the story of a brilliantly unconventional physician and writer—and of the man who has illuminated the many ways that the brain makes us human. Grades 7-9. Addresses geography, history, and culture This engaging program introduces students to different regions of the world, the physical and human features of the earth, and cultural topics

of special interest that help students of all abilities appreciate world geography and cultures. The manageable, accessible, single-concept approach is paced appropriately to help students successfully meet curriculum requirements. Science is the study of everything in the universe, from Earth's moon to the farthest galaxies, from the motion of atoms to the forces on a roller coaster. In less than one class period, students can easily finish short pieces that include traditional tales and myths of the Americas and the Caribbean, famous heroes and infamous villains like King Arthur and Jesse James, and original stories of incredible feats - many based on real-life disasters such as the Titanic and Hurricane Andrew. Teaching support available.
