Star Gazing Guide

A Stargazing Program for Beginners Jamie Carter, 2015-11-20 Sets out a simple month by month program to reveal all of the night sky's biggest and most beautiful secrets in just one year and with only a few hours of stargazing each month. By investing just an hour a week and 50 in binoculars it's possible to learn a few simple techniques and quickly gain a real insight into the night sky's ever-changing patterns and what they tell us about Earth, the seasons, and ourselves. Searching more for a learned appreciation of nature and our exact place within the cosmos than academic scientific knowledge, science and travel writer Jamie Carter takes the reader on a 12-month tour of the night sky's incredible annual rhythms that say so much about Earth. During the journey, he learns about the celestial mechanics at work in the skies above that are to the beginner almost beyond belief. As well as the vital constellations and clusters and the weird and wonderful nebulas, he searches out dark sky destinations across the globe that help increase knowledge and give a new perspective on familiar night sky sights. On the journey, he witnesses a solar eclipse and grapples with star charts, binoculars, smartphone apps, telescopes, spots satellites, and attempts basic astro photography. By year's end, the reader will be able to glance at the night sky from anywhere on the planet and tell what direction he or she is facing, what time it is, where all the planets are, and even where the Galactic Center Point is.

Sky Gazing Meg Thacher, 2020-10-13 The sun, moon, stars, and planets have been a source of wonder and fascination for as long as humans have inhabited the earth. In *Sky Gazing*, a highly visual guide to observing the sky with the naked eye, kids aged 9-14 will delve into the science behind what they see, whether they live in a dark rural setting or under the bright lights of the city. Exploring astronomical objects and events, this captivating book takes young readers on a tour of our solar system and deep space beyond, with explanations of how objects like Earth's moon were formed and the why behind phenomena such as eclipses, northern lights, and meteor showers. Curious sky gazers will discover how to find and observe planets, no binoculars or telescopes required, and star charts will guide them in spotting constellations throughout the seasons and in both hemispheres while they learn about constellation myths from cultures around the world. Activities include tracking the cycles of the sun and moon and observing the sky during daylight hours or on a cloudy night, while astronomer profiles and sidebars on space technology and current issues such as light pollution help ground kids' discoveries in the ancient and enduring science of studying the sky.

The Stargazer's Guide to the Night Sky Dr. Jason Lisle, 2012. Unless otherwise noted, Scripture quotations are from the New King James Version of the Bible. [Philip's Complete Guide to Stargazing](#) Robin Scagell, 2015-10-12. In a new flexi paperback format, *Philip's Complete Guide to Stargazing* is an inspiring introduction to astronomy, providing all the information you need to explore the night sky. This is a comprehensive guide to an increasingly popular leisure pursuit. Author Robin Scagell first introduces the wonders of the night sky and explains how and why the sky changes during the night and through the seasons. He describes the various items of equipment you can use: binoculars, telescopes, and accessories, and gives practical advice on what to choose and what you can expect to see. There are plenty of tips too for observing just with the naked eye. The book continues with chapters devoted to the Moon, the Solar System, the stars, and deep sky objects, illustrated with photographs and observational drawings made by talented amateur astronomers, as well as spectacular images returned by spacecraft or taken by large telescopes. The month-by-month guide to the constellations features maps showing the constellations on view each month from both northern and southern hemispheres and is applicable to any year and any place on Earth. A complete set of star charts presents the whole sky in a series of maps that show stars down to magnitude 5.5. These maps are drawn with black stars on a white background so that observers can pencil their own observations on to the charts. Opposite each map is a photo-realistic image which shows how the same portion of the sky typically appears to the eye. Completing the book is an illustrated A-Z dictionary of astronomy covering the planets, stars, and galaxies, cosmology, amateur astronomy, and professional observatories, space exploration, famous astronomers, scientific terms, theories, and much more, and is illustrated with photographs, artworks, and diagrams. *Philip's Complete Guide to Stargazing* is an invaluable reference source for astronomers of all levels.
