Allergy and Asthma Made Easy Amtul Salam Sami, 2020-06-01. A concise practical guide to the diagnosis, treatment and management of common allergy and asthma conditions in primary care. Allergy and asthma represent some of the most common chronic conditions presenting in primary care. Furthermore, up to 20% of patients with allergies struggle on a daily basis with the fear of anaphylactic shock or an asthma attack. This book guides readers through the basic immunology and pathophysiology and then provides details on all aspects of the clinical assessment of allergic patients: History taking, Clinical examination, Investigations and imaging. A broad range of allergies is then presented with succinct clinical advice detailing the causes, diagnosis and treatment of each allergy in turn. Asthma is covered separately using the latest asthma guidelines to describe the risk factors, stratification and accurate diagnosis. This is followed by a concise presentation of asthma management and monitoring in primary care. The book concludes with the pressing issue of childhood allergy and highlights the investigations, assessment and treatments specific to allergy and asthma in children. This is the ideal clinical text for GPs, medical students and nurse practitioners looking to manage common allergies and asthma and for those looking for decision-making support when considering onward referral.

Pattanayak, Priyashree Sunita, Spriha Anshu, 2016-07-27 Scientific Essay from the year 2016 in the subject Medicine Pharmacology Pharmacy language English abstract Asthma is a chronic disorder specifically characterized by severe inflammation and constriction mucus hyper secretion and hyper responsiveness in the airway Allergic Asthma AA is characterized by discontinuous airway obstruction that may cause temporary to severe asphyxiation and can consequence into death Airway obstruction in asthma is because of rigorous inflammation concerning multi cellular components together with eosinophils neutrophils CD4 T lymphocytes mast cells with eosinophilic infiltration being the most conspicuous feature The multifaceted phenotype of AA suggested being elevated from multiple interactions of infiltrating and structural cells that is coordinated by T helper 2 TH2 cells consequential in chronic airway inflammation By extremely secreting convinced mediators like interleukin IL 4 IL 5 and IL 13 which grasps a key point in asthma pathogenesis cause erratic degree of broncho obstruction increased mucus production and airway remodeling There are a variety of T cell which plays a significant role in AA that is TH1 TH2 TH17 regulatory T cell TH3 TH22 TH25 TH9 and others There are various molecular signaling molecules such as STAT4 FOXP3 GATA 3 and T bet which regulates CD4 T cells in AA Nowadays the approach to manage asthma is based on inhaled bronchodilator and corticosteroids But the research is on the mechanism of some

promising phytomedicines we summarized here with some mechanisms of some flavonoids to alleviate AA through CD4 T cells In conclusion we found that the CD4 T cell subpopulations played some major contribution in regulating modulating the AA and interestingly the natural potent anti oxidant anti inflammatory compounds such as flavonoids could be able to attenuate the AA by regulating these subpopulations of CD4 T cells or the signaling molecules involved in the pathogenesis
