Skills Lab Methodology Mar 17 2024 A Skills lab is a learning resource center that provides an environment for learning clinical skills where students can practise without jeopardizing patient care or provoking adverse effects. It reduces the difficulties experienced by students when they first encounter patients in clinical practice. In the skills lab students practise basic and advanced nursing skills supervised by faculty members, or at independent practice time. The designated room for skills lab should have a layout of model ward found in the hospital, accommodating various learning areas and stations according to the learning needs of the students who work in small groups under the supervision of instructors. Within the room there ought

to be stations for demonstration of clinical skills by use of a simulated patient, management or task trainer and sitting area for discussion and watching projected procedures. Safety, staffing, skills lab etiquette and care of skills lab equipment is of importance. Various nursing skills are practiced using simulated patients and videos. Interactive lecture sessions, discussions, demonstration of skills, practise on manikins, case studies, presentations, videos are some of the teaching methods used. Students get the opportunity to practise independently, with students' peers, simulated patients, skills lab assistants, and with faculty members until they acquire competent skills and attitude based on the curriculum. For effective learning in skills lab the student must apply critical creative thinking skills as well as, clinical reasoning and decision making skills. Debriefing process is conducted at the end of the session to give the student time to reflect, discuss the simulation experience, analyze, synthesize, and evaluate their action. Objective structured clinical examination (OSCE) is used for assessment of clinical competence in which the components of competence are assessed in a planned or structured way with attention being paid to the objectivity of the evaluation.

Handbook of Research on Updating and Innovating Health Professions Education: Post-Pandemic Perspectives Oct 12 2023

The outbreak of the Coronavirus in early 2020 resulted in unprecedented changes to health professions education. The pervasive stay-at-home orders resulted in faculty, who were trained for preparing the next generation of health professionals in a traditional learning environment, throwing out their lesson plans and starting anew. New approaches to teaching and learning were created quickly, and without the typical extensive planning, which introduced several challenges. However, lessons learned from these approaches have also resulted in increased technology adoption, innovative assessment strategies, and increased creativity in the learning environment. The *Handbook of Research on Updating and Innovating Health Professions Education: Post-Pandemic Perspectives* explores the various teaching and learning strategies utilized during the pandemic and the innovative approaches implemented to evaluate student learning outcomes and best practices in non-traditional academic situations and environments. The chapters focus specifically on lessons learned and best practices in health professions education and the innovative and exciting changes that occurred particularly with the adoption and implementation of technology. It provides resources and strategies that can be implemented into the current educational environments and into the future. This book is ideal for inservice and preservice teachers, administrators, teacher educators, practitioners, medical trainers, medical professionals, researchers, academicians, and students interested in curriculum, course design, development of policies and procedures within academic programs, and the identification of best practices in health professions education.

Student Empowerment in Higher Education. Reflecting on Teaching Practice and Learner Engagement Oct 20 2021 Student Empowerment in Higher Education brings together the accumulated knowledge and experience of many accomplished teachers and students from higher education institutions around the world, and has much to offer those who are engaged in higher education, as students, teachers or support staff. The authors offer personal reflections in teaching, learning, mentoring, assessment, hands-on activities, course design and student identities in higher education across the globe, supported by academic research and scholarship. Readers are provided with a window into tried and tested empowering practices in varying contexts, enabling them to see what works and what does not, alongside the challenges and possibilities. A distinctive feature of this book, and its paramount strength, is that it explores best practices in student empowerment, whilst reflecting on matters of teaching and learning that are familiar to students and teachers alike, and also explores practices in a variety of disciplines. The

intention of these volumes, therefore, is not only to inform readers about the diverse learning and teaching approaches of the authors, but, most importantly, to facilitate processes of student empowerment and promote reflection on teaching and learning practices. "In recent decades, higher education policy discourse has persistently implied that a university education is 'delivered' to students under the impersonal banner of 'the student experience'. Not only does this commodify the diverse, individual experiences of students into one marketable product, it also creates false barriers and power dynamics between students and their teachers. In *Student Empowerment in Higher Education*, the students and lecturers who collaborated to write this important volume have literally blown such misleading notions out of the window! I highly recommend each varied and autonomous chapter to learn what really inspires confidence and success in university students." Professor Sarah Hayes, Professor of Higher Education Policy, University of Wolverhampton "The two volumes of *Student Empowerment in Higher Education* offer the reader rich and varied examples and understandings of student empowerment from around the world. The authors provide reflective accounts of learning and teaching from diverse perspectives and disciplines, which focus on many different areas of practice in higher education. It is this variety that will appeal to many readers, as the source of ideas and inspiration for numerous possible routes to empowerment. With many chapters co-authored by students and staff, the book models the collective responsibility students and staff have for enhancing student empowerment." Dr. Catherine Bovill, Senior Lecturer in Student Engagement, University of Edinburgh; Fulbright Scholar, Elon University, North Carolina, USA; Visiting Fellow (Knowledge Exchange), University of Winchester

America's Lab Report Mar 05 2023 Laboratory experiences as a part of most U.S. high school science curricula have been taken

for granted for decades, but they have rarely been carefully examined. What do they contribute to science learning? What can they contribute to science learning? What is the current status of labs in our nation's high schools as a context for learning science? This book looks at a range of questions about how laboratory experiences fit into U.S. high schools: What is effective laboratory teaching? What does research tell us about learning in high school science labs? How should student learning in laboratory experiences be assessed? Do all students have access to laboratory experiences? What changes need to be made to improve laboratory experiences for high school students? How can school organization contribute to effective laboratory teaching? With increased attention to the U.S. education system and student outcomes, no part of the high school curriculum should escape scrutiny. This timely book investigates factors that influence a high school laboratory experience, looking closely at what currently takes place and what the goals of those experiences are and should be. Science educators, school administrators, policy makers, and parents will all benefit from a better understanding of the need for laboratory experiences to be an integral part of the science curriculum-and how that can be accomplished.

Clinical Teaching in Nursing Apr 25 2022 This book aims to assist clinical teachers in the practice of clinical teaching. It assumes that clinical teachers will bring to their task a background knowledge of educational principles, experience in a clinical nursing field, knowledge of substantive nursing content, a love of teaching and a desire to share with their students the joys, tears, challenge and wonder of learning in the clinical setting. The format is designed around a set of commonly encountered problems and encourages readers, whether on the threshold of a career as a clinical teacher or those who are experienced, to think through their responses to the problem situation before reading on to a disclosure of possible courses of action. In brief, the book is a companion to *Teaching Nursing: A Self Instructional Handbook* (Ewan and White, 1984). The authors' interest in clinical teaching can be traced through a number of years in a variety of teaching careers with multidisciplinary health professional groups, of whom nurses comprise the majority of practitioners. As senior lecturers in the School of Medical Education, the authors were involved in developing and teaching a Master of Health Personnel Education Degree course; the students (or Fellows) in that programme were all graduates from a broad range of health care disciplines - nursing, medicine, physiotherapy, occupational therapy, nutrition, dentistry, health

education, health resources management, radiography, social work, community development, occupational safety and health.

Lessons from Problem-based Learning Aug 18 2021 Problem-based learning (PBL) has excited interest among educators around the world for several decades. Among the most notable applications of PBL is the approach taken at the Faculty of Health, Medicine and Life sciences (FHML) at Maastricht University, the Netherlands. Starting in 1974 as a medical school, the faculty embarked on the innovative pathway of problem-based learning, trying to establish a medical training program which applied recent insights of education which would be better adapted to the needs of the modern physician. The medical school, currently part of the FHML, can be considered as an 'established' school, where original innovations and educational changes have become part of a routine. The first book to bring this wealth of information together, *Lessons from Problem-based Learning* documents those findings and shares the experiences of those involved, to encourage further debate and refinement of problem-based learning in specific applications elsewhere and in general educational discussion and thought. Each chapter provides a description of why and what has been done in the Maastricht program, followed by reflection on the benefits and issues that have arisen for these developments. The final section of the book examines the application of PBL in the future, and how it is likely to develop further.
