Sub-Saharan Africa grapples with many public health issues such as food insecurity, increased prevalence of infectious diseases, limited access to clean water supply, poor nutrition and lack of improved health services for its populace (IMF, 2021). Of all these challenges, the inaccessibility of clean water supply for both the rural and urban populace is the most pressing challenge, which has been exacerbated by extensive pollution and climate change crises. The issue of water access and supply affects both rural and urban populations. At rural areas water is accessed in yard taps and in arid regions through water kiosks managed by private owners. Among the urban poor, water access is compromised by poor supply infrastructure especially among informal settlers and risks such as contamination during the supply chain are imminent This book therefore seeks to close this knowledge gap by 1) generating a water resources inventory for Sub-Saharan Africa region, 2) exploring the water crises in both its urban and rural settings, 3) understanding the causatives of the crises and 4) suggesting viable solutions to manage the water challenges using named case studies. The aim is to improve understanding on the region's water problems and advise scholars and policymakers on priority research areas and action plans to better water management for sustainable development. The European Union (EU) has now become the largest trade partner of China. While Sino-US trade relations and particularly the high-profile trade disputes between the US and China get considerable academic attention for geopolitical reasons, less research has been done on the Sino-EU trade disputes that gradually loom large on the horizon. This book delves into the trade disputes between China and the EU and identifies the causes for trade disputes. It examines how the disputes will shape China-EU trade relations, and offers a macro overview on how the issues can be resolved or at least how they should be managed. This rare book was one of the few early 20th century dog books to deal solely with the true 'Working Terrier'. Now very scarce and much sought after in its original limited edition,we have reprinted it in a high quality hard back format. Written by an expert in both breeding and working terriers, the book is packed with practical advice, and includes many original photographs of terriers in action against a variety of quarry. J.C. Bristow-Noble was well known in his time as a breeder of top quality sporting Terriers. He spent many years experimenting with cross-breeding Fox Terriers and Sealyhams with other dog breeds and occasionally with famous mongrel Terriers, before finally concentrating on Jack Russell Terriers, always keeping the description of Russell's famous "Trump" in his mind's eye. His ideal sporting terrier for entering to badger, fox and other quarry was a thick-set 14 pound, hard/dense coated dog with a muzzle of moderate length and an even and fairly thick jaw bone. This rule of thumb eventually led to him owning a kennel of working dogs second to none and well-known throughout the country. His Terriers were regularly sold for sums in excess of £50.00 - an enormous sum of money in the early 1900s. His stud dogs were also much in demand even at his minimum stud fee of 10 guineas. Contents include: The Correct Type of Working Terrier; Ratting; Badger Hunting; On the Use of Terriers Against: Otter, Fox, Stoat, Rabbit; On the Use of Terriers Against Moles; On the Care, Choice and Correct Use of Ferrets; Some Diseases and Their Treatment. Through a socio-historical analysis of how SMSs emerged and spread across high-risk industries and countries, the book also explains the other stakes underpinning this new approach to safety management. Features: Explores SMS as it is implemented in aviation based on examples from several countries and regions, namely the UK, USA, and Australia. Presents a socio-historical analysis of how SMSs emerged in high-risk industries. Provides insights to explain the existing limitations of SMS. Proposes new avenues to reach beyond the limitations of SMS. Discusses the COVID-19 pandemic within the framework of risk analysis. The book is intended for safety professionals and regulators, as well as graduate students and researchers in safety science and engineering. Inside Roman Libraries: Book Collections and Their Management in Antiquity In times previous, managers were respected and idealized by those in the political, economic, and societal circles of our country. Employees felt a sense of trust in their managers, and managers a sense of duty to their employees. That feeling has largely dissipated. An increasing number of books, magazine articles, and newspaper columns have been written denigrating the managerial profession, blaming the average manager for the distrust in our political institutions, the collapse of our economic system, and the stresses in our societal compositions. It is not right, it is not accurate, and it is not fair. The Good Manager: A Guide for the Twenty-First Century Managerpresents the six key attributes of a good manager. The most important attribute the one that will most likely determine your success or failure as a manager is the ability to be a good person, one who lives a decent and honorable life, who is incredibly kindhearted, controls the most destructive human emotions, tells the truth, does what's right, and always looks for the good along the road of life. The Good Manager teaches the fundamentals of management by illustrating how a decent and honorable person can move along the intellectual/moral spectrum to become a good manager. The book entitled Diseases of Field Crops and their Management provides most recent information about major diseases of cultivation field crops, their symptoms, pathogen characters, epidemiology, and management. A sequel to Hazard Analysis and Risk Assessment, this text demonstrates how to manage major hazards inside and outside the plant. The book is intended to provide comprehensive introduction to the important aspects of the field of forest pathology and tree diseases. The book is arranged in two major parts. The fundamental chapters, present forest diseases, pathogens, epidemics, and management that is applicable to all forest trees. The applied chapters on the individual crops that are grouped alphabetically present information on the symptoms, pathogen and integrated management of major diseases of forest trees. It was designed to give a broad overview of the field of forest pathology but with sufficient detail that they will be able to assess their specific role as practicing forestry professionals. Note: T & F does not sell or distribute the Hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka. Horticulture in India is fast emerging as a major commercial venture, because of higher remuneration per unit area and the realization that consumption of fruits and vegetables is essential for health and nutrition. In the last one decade, export potential of horticultural crops has significantly increased attracting even multinationals into floriculture, processing and value added products. Productivity of horticultural crops in India is relatively low compared to other countries. Of the several factors responsible for lower productivity of horticultural crops, pests (insect, mite and vertebrate pests) are considered as important limiting factors. The annual losses due to pests to all the crops in India was estimated at Rs. 60,000 million in 1983, which at today's prices could exceed Rs. 200,000 million. The information on pests (insect, mite and vertebrate pests) in horticultural crops is very much scattered. There is no such book at present which comprehensively and exclusively deals with the above aspects on horticultural crops. The present book deals with geographical distribution, damage, host range, biology, predisposing factors, and management of insect, mite and vertebrate pests in horticultural crops in detail using regulatory, physical, cultural, chemical, biological, host plant resistance and integrated methods. The book is extensively illustrated with excellent quality photographs enhancing the quality of publication. This book is a practical guide to practicing farmers of horticultural crops. Further, it is a useful reference to policy makers, research and extension workers and students. The material can also be used for teaching undergraduate and post-graduate courses. highly acclaimed comprehensive and practical text covering the principles and practice of the management of cancer Why Buy This Book? Microscope (NottinghamUniversityMedicalSchool Gazette) Is the State Department doing enough to keep U.S. personnel safe? U.S. personnel overseas can be targets of terrorism, violence, and crime—particularly while in transit. From 1998 to 2015, State Department personnel were attacked more than 100 times while traveling outside of embassy compounds, with many of the worst attacks occurring while victims were in motorcades, official vehicles, or other forms of transportation. The Department of State has taken steps to protect personnel in transit, but we found opportunities to enhance transportation policies, training, and communications, and made multiple recommendations to that end. What GAO Found The Department of State (State) has established policies related to transportation security for overseas U.S. personnel, but gaps exist in guidance and monitoring. GAO reviewed 26 posts and found that all 26 had issued transportation security and travel notification policies. However, policies at 22 of the 26 posts lacked elements required by State, due in part to fragmented implementation guidance on what such policies should include. State also lacks a clear armored vehicle policy for overseas posts and procedures for monitoring if posts are assessing their armored vehicle needs at least annually as required by State. These gaps limit State's ability to ensure that posts develop clear policies that are consistent with State's requirements and that vehicle needs for secure transit are met. While State provides several types of training related to overseas transportation security, weaknesses exist in post-specific refresher training. Regional security officers (RSO) receive required training related to transportation security in special agent courses, and nonsecurity staff reported receiving relevant training before departing for posts—including on topics such as defensive driving and the importance of taking personal responsibility for one's security—as well as new arrival briefings at posts. At most of the 9 posts GAO visited, however, staff had difficulty remembering key details covered in new arrival briefings or described the one-time briefings as inadequate. State's requirements for providing refresher briefings are unclear, potentially putting staff at greater risk. State uses various systems at overseas posts to communicate time-sensitive information related to transportation security, but several factors hinder its efforts. RSOs and other post officials are responsible for communicating threat information to post personnel. However, at 4 of the 9 posts it visited, GAO learned of instances in which staff did not receive important threat information in a timely manner for various reasons. In one case, this resulted in an embassy vehicle being attacked with rocks and seriously damaged while traveling through a prohibited area. In addition, while all 9 of the posts GAO visited require that personnel notify the RSO before traveling to certain locations, personnel at more than half of the 9 posts said they were unaware of these requirements or had difficulty accessing required travel notification systems. Timely communication is critical for managing transportation security risks, and failure to communicate important transportation-related information and receive such information promptly could leave overseas personnel facing avoidable security risks. Why GAO Did This Study U.S. diplomatic personnel posted overseas continue to face threats to their security. According to State, personnel and their families are particularly vulnerable when traveling outside the relative security of diplomatic work facilities or residences. In many serious or fatal attacks on U.S. personnel over the last three decades, victims were targeted while in motorcades, official vehicles, or otherwise in transit. GAO was asked to review how State manages transportation-related security risks to U.S. diplomatic personnel overseas. For this report, GAO evaluated the extent to which State, with regard to transportation security at overseas posts, has (1) established policies, guidance, and monitoring; (2) provided personnel with training; and (3) communicated time-sensitive information. GAO reviewed agency documents and met with key officials in Washington, D.C. GAO also reviewed policies from a judgmental sample of 26 posts—primarily higher-threat, higher-risk locations—and conducted fieldwork and met with officials at 9 of these posts. This is the public version of a sensitive but unclassified report issued in September 2016. What GAO Recommends GAO is making eight recommendations in this report to help State improve its management of transportation-related security risks by enhancing associated policies, guidance, and monitoring; clarifying its requirements for refresher briefings; and better communicating time-sensitive information. State agreed to take steps for all but one recommendation—the need to clarify its requirements for refresher briefings. GAO continues to believe this is needed as discussed in the report. Rich and colorful illustration Problem-oriented approach Technical terms are avoided, when they can be replaced with plain English Book deals with the science of Ophthalmology at a basic level Text concentrates on eye diseases which are likely to be seen by general practitioners and optometrists at the primary care level Ideal for students Awarded bronze by "ForeWord Magazine" in the Book of the Year Awards 2007, Business & Economics category, this resource provides solutions for these fundamental symptoms of employee-manager discomfort. Nematodes continue to threaten horticultural crops throughout the world, particularly in tropical and sub-tropical regions. Estimated overall average annual yield loss of the world's major horticultural crops due to damage by plant parasitic nematodes is 13.54%. Monetary losses due to nematodes on 10 horticultural crops, six of which are life sustaining were estimated at US\$ 19.37 billion annually based on 1984 production figures and prices. These deleterious effects on plant growth result in reduced yields and poor quality of horticultural crops. Nematode management is therefore, important for high yields and quality that are required by the high cost of modern crop production. The information on nematode diseases and their management, especially crop wise, is very much scattered and there is no book which deals entirely with the above aspects on horticultural crops. This book deals with nematode diseases and their management in horticultural crops such as fruit, vegetable, orname-ntal, medicinal, aromatic, plantation, spice and tuber crops. Each nematode disease is described in adequate detail under the following heads: economic importance, crop losses, distribution, symptoms, hosts range, life cycle, races/ biotypes, host-parasite relationship, histopathology, ecology, spread, survival, interaction with other pathogens and management. The management methods presented includes regulatory, physical cultural, chemical, biological, host resistance and integrated approach. An entire chapter is devoted for sources of availability of critical inputs used for nematode management which would be very useful to the farmers. Very useful information on certain aspects of nematode management is presented in Appendix. The book is adequately illustrated with about 50 figures. This book is a practical guide to practicing farmers of horticultural crops. Further, it is a useful reference to policy makers, research and extension workers and students. The material can also be used for teaching under-graduate and post-graduate courses. Wheat Diseases and Their Management addresses biotic and abiotic constraints to wheat production. Besides detailed illustrations and descriptions of the most important diseases of wheat in the world, it offers an updated view on the reemergence of some old diseases and the occurrence of new races of the pathogen. It deals with the sustainability of wheat production through precision agriculture and focuses on the importance of conservation tillage. The book also deals with pillars of integrated disease management which would be eco-friendly and reduce severity of diseases and yield losses, with acquired Latin-American experiences of more than 40 years. Get what you need from your boss In this follow-up to the bestselling It's Okay to Be the Boss, Bruce Tulgan argues that as managers demand more and more from their employees, they are also providing them with less guidance than ever before. Since the number one factor in employee success is the relationship between employees and their immediate managers, employees need to take greater responsibility for getting the most out of that relationship. Drawing on years of experience training managers and employees, Tulgan reveals the four essential things employees should get from their bosses to guarantee success at work. Shows employees how to ask for what they need to succeed in their high-pressure jobs Shatters previously held beliefs about how employees should manage up Outlines what employees must get from their managers: clear expectations; the skills needed to perform their jobs; honest feedback, recognition or rewards A novel approach to managing up, It's Okay to Manage Your Boss is an invaluable resource for employees who want to work more effectively with their managers. The vegetation that separates golf course holes often contains wildlife habitats surpassing that of many more recognised natural environments. This work details the need for management of these areas and explains their ecological significance. Plant stresses are serious threats to the sustainability of crop yields accounting for more crop productivity losses than any other factor in rainfed agriculture. Post-harvest losses mean surplus crops do not reach market, affecting the livelihoods of farming families, and too often these families are left with no other option than to eat contaminated stored food. These constraints impact the food security of these farming families as well as the communities and countries in which they live. This book is the demonstration of a clear synergistic effect of stresses, an effect that was unexpectedly as important as any other stress applied alone. This book will add to our current knowledge of abiotic stress response in plants and will provide the groundwork necessary to build future strategies for crop enhancement. The fundamental principles that underpin all biotechnology are explained and a full range of examples discussed to show how these principles are applied; from starting substrate to final product. It will be beneficial to both plant breeders and molecular biologists, because it combines the topics of physiology, tolerance genes, and breeding methods. When these topics are presented together, it is easy to compare all aspects of tolerance mechanisms and breeding methods for abiotic stresses. These comparisons are useful to understand which pathways or which genes are important for rendering more tolerance to a certain abiotic stress, and to bring forward new ideas for improving the tolerance. Features •Cover both plant biotic and abiotic stresses •Important factors in managing crops for water stress conditions •Substantially increase the sustainable productivity of smallholder farmers in developing countries •Genetic and biochemical

approaches – if those approaches constitute a substantial improvement on current practices. This monograph mainly covers our studies on the causes and management of the most common and disabling disorders of stress and strain of life. It is now well established that the brain with its known centres for sensory, intellectual and emotional functions plays the main role in maintaining a balanced condition of our body and mind by liberating required amount of neurohumors and hormones. Any disturbance of this homeostasis by genetic or environmental factors would ultimately lead to the development of the Stress Disorders. At first the changes are functional and later on bodily changes of Stress Disorders appear. In the treatment, during the acute stage, the use of tranquilizers and other drugs may help. However, if the disturbance persists, the practice of Yoga would help greatly to get over the neuro-humoral changes occurring in the brain. Hence the integrated practice of Yoga has an important role to play in the prevention and treatment of Stress Diseases. All these aspects have been dealt with in the book in sufficient detail with regard to each of the disorders of stress for the benefit of all concerned. Managing Trade Relations in the New World Economy analyses the implications of the new world economy for global trade. Thomas Andersson explores how manufactured exports have increased exponentially while the western economies have accrued massive current account deficits. Warning against the dangers of protectionism, he argues that the future of the world trading system, may depend upon the external policies of the EC. Since the last edition of this book, there have been a number of advances in the fields of glaucoma, corneal disease, medical retina and genetics.
