“An excellent introduction to a critical period in the history of Rome. Cicero comes across much as he must have lived: reflective, charming and rather vain.”—The Wall Street Journal “All ages of the world have not produced a greater statesman and philosopher combined.”—John Adams He squared off against Caesar and was friends with young Brutus. He advised the legendary Pompey on his botched transition from military hero to politician. He lambasted Mark Antony and was master of the smear campaign, as feared for his wit as he was for his ruthless disputations. Brilliant, voluble, cranky, a genius of political manipulation but also a true patriot and idealist, Cicero was Rome’s most feared politician, one of the greatest lawyers and statesmen of all times. In this dynamic and engaging biography, Anthony Everitt plunges us into the fascinating, scandal-ridden world of ancient Rome in its most glorious heyday—when senators were endlessly filibustering legislation and exposing one another’s sexual escapades to discredit the opposition. Accessible to us through his legendary speeches but also through an unrivaled collection of unguarded letters to his close friend Atticus, Cicero comes to life as a witty and cunning political operator, the most

eloquent and astute witness to the last days of Republican Rome. Praise for Cicero “ [Everitt makes] his subject—brilliant, vain, principled, opportunistic and courageous—come to life after two millennia.”—The Washington Post “ Gripping . . . Everitt combines a classical education with practical expertise. . . . He writes fluidly.”—The New York Times “In the half-century before the assassination of Julius Caesar . . . Rome endured a series of crises, assassinations, factional bloodletting, civil wars and civil strife, including at one point government by gang war. This period, when republican government slid into dictatorship, is one of history’s most fascinating, and one learns a great deal about it in this excellent and very readable biography.”—The Plain Dealer “Riveting . . . a clear-eyed biography . . . Cicero’s times . . . offer vivid lessons about the viciousness that can pervade elected government.”—Chicago Tribune “Lively and dramatic . . . By the book’s end, he’s managed to put enough flesh on Cicero’s old bones that you care when the agents of his implacable enemy, Mark Antony, kill him.”—Los Angeles Times When Major Hannum, the owner of the circus, is killed in a suspicious car accident, Merlini the magician decides to investigate. This text covers the basic techniques and applications

of engineering economy for all disciplines in the engineering profession. The writing style emphasizes brief, crisp coverage of the principle or technique discussed in order to reduce the time taken to present and grasp the essentials. The objective of the text is to explain and demonstrate the principles and techniques of engineering economic analysis as applied in different fields of engineering. This brief text includes coverage of multiple attribute evaluation for instructors who want to include non-economic dimensions in alternative evaluation and the discussion of risk considerations in the appendix, compared to Blank's comprehensive text, where these topics are discussed in two unique chapters. Publisher Description PI Nigel Strangeways returns in a “finely written wits-twister” with a “surprise shake-up at the finish” from the renowned Golden Age mystery author (Kirkus Reviews, starred review). Sex. Money. Drugs. Take your choice. In middle of a cold snap, with snow swirling round the imposing Easterham Manor, Nigel and Georgia Strangeways enter the warmth of the Victorian estate. But upon their arrival, the couple quickly learns that all is not as cozy as it seems. The whole house is pervaded by a sense of foreboding: A room is haunted, the cat is possessed, and the specter of the enigmatic Elizabeth Restorick looms. Confounded by the guests’ strange reactions to the very mention of Elizabeth’s name, Nigel never gets the chance to form his own opinion of the young woman. The next morning, Elizabeth Restorick is found hanged and naked in her room, a hint of a smile playing on her painted lips. Could her

apparent suicide be more than just that? Would this beautiful girl—sensuous, compassionate, full of vitality—have taken her own life? Or did someone take it from her? With too many loose ends to count, planted evidence, and motives mounting, Nigel must delve into Miss Restorick's colorful past to solve this tragic mystery. Praise for Nicholas Blake "An outstanding mystery novel. Mr. Blake's writing is a delight in itself." —The New York Times "The Nicholas Blake books are something quite by themselves in English detective fiction." —Elizabeth Bowen "His plots are ingenious." —The Times Literary Supplement "A master of detective fiction." —The Daily Telegraph

Answers are at the back of the book. A curse shall befall anyone who takes the bronze lamp out of Egypt, so a seer has said. Lady Helen Loring thinks such tales are sheer poppycock. She takes the lamp back to England, she places it on the mantelpiece at Serven Hall, and she disappears, just as the seer said. Engineering Economy, 7th edition, presents a crisp, bold new design using color, highlighting and icons to focus on important concepts, terms, equations and decision guidelines. mathematical techniques or 'methods', and large numbers of these students are insecure in their mathematical grounding. This book offers a course in mathematical methods for students in the first stages of a science or engineering degree. Its particular intention is to cover the range of topics typically required, while providing for students whose mathematical background is minimal. The topics covered are: * Analytic geometry, vector algebra, vector fields (div and curl), differentiation, and integration. * Complex numbers, matrix operations, and linear systems of equations. * Differential equations and first-order linear systems, functions of more than one variable, double integrals, and line integrals. * Laplace transforms and Fourier series and Fourier transforms. * Probability and statistics. The earlier part of this list consists largely of what is thought pre-university material. However, many science students have not studied mathematics to this level, and among those that have the content is frequently only patchily understood. *Mathematical Techniques* begins at an elementary level but proceeds to give more advanced material with a minimum of manipulative complication. Most of the concepts can be explained using quite simple examples, and to aid understanding a large

number of fully worked examples is included. As far as is possible chapter topics are dealt with in a self-contained way so that a student only needing to master certain techniques can omit others without trouble. The widely illustrated text also includes simple numerical processes which lead to examples and projects for computation, and a large number of exercises (with answers) is included to reinforce understanding.
