This classic introduction to ophthalmology has been thoroughly revised and updated to reflect the changes in practice that have taken place since it was first published in 2009. In recent years, an increasing variety of health professionals have been involved with the care of ophthalmic patients. The aim has been to provide an efficient, high-quality and cost-effective service to patients, which utilizes the skills of the multidisciplinary ophthalmic team. This study guide offers both a basic introduction and a 'skills escalator' for nurses and other health professionals. Those who make use of its content and use the 'To do' panels for reflection and research will develop their knowledge and skills more quickly, and acquire good habits of self-assessment and self-directed learning. The simple questions at the end of each chapter can be used for self-testing, or as a basis for questions that mentors can ask their students. The content is deliberately restricted to 'the basics' in terms of the areas chosen, though they are all covered in reasonable depth. Students are encouraged to use the skills checklists at the end of the book to document their personal progress and validate their developing practice. These will provide useful evidence for annual performance appraisals. Features key additions and revisions that include: two chapters important to ophthalmic assistants - Refractive Surgery Concepts and Procedures, Practice Management and Coding; chapters and glossary modified to incorporate evidence-based information and technologies; rewritten test section, including 45 questions; and more. *OphthoBook* is the printed version of the amazing *OphthoBook.com* online book and video series. The all-important red eye has a section all its own, including symptoms, signs, what's an emergency and what's not. A chapter on eye symptoms and their potential causes will help you understand patients' complaints. New to the Second Edition: A chapter on refractive errors and their correction, including a section on glasses and contact lenses New technology topics including optical coherence tomography, scanning laser tomography, wavefront analysis and more Updated information on medications and refractive surgery Includes over 65 figures and 10 tables Now you will finally understand how the eye works without spending hours trying to get through an overwhelming medical book. Helps in preparation for the JCAHPO COA Exam. This title contains hundreds of sample questions and answers covering the main topic areas outlined in the exam. A compilation of tidbits and factoids to assist in preparation for JCAHPO testing at COA, COT, and COMT levels. I've had at least a dozen people in the last couple months ask for copies of my self-compiled notes I used for studying for (and passing!) the JCAHPO COA, COT, and COMT tests. Typically when someone asks, I gladly and dutifully run out to Kinko's, copy and print the files, and sometimes have them spiral bound for ease of use as well, and then am reimbursed for the cost. I've finally decided to streamline the process and get out of the middle of it, AND produce a nicer looking product (and save gas money and time in front of the printer, lol!) The factoids are compiled from a multitude of resources through the years and started geared towards the COA. It was then added to and grown as I studied for the COT and COMT exams. I've found that different resources sometimes contradict one another, so occasionally you'll find some contradictions in the notes as well.
