*Adaptive Hypermedia and Adaptive Web-Based Systems* Wolfgang Nejdl,Judy Kay,Pearl Pu,Eelco Herder,2008-07-30

Adaptive Hypermedia has emerged as an important area of both academic and deployed research. It encompasses a broad range of research that will enable personalized adaptive hypermedia systems to play an even more effective role in people's lives. The Web has enabled the widespread use of many personalized systems such as recommenders, personalized filters, and retrieval systems, e-learning systems, and various forms of collaborative systems. Such systems have been widely deployed in diverse domains such as e-Commerce, e-Health, e-Government, digital libraries, personalized travel planning, as well as tourist and cultural heritage services. They are particularly promising for users with special needs. The exciting possibilities of such deployed adaptive hypermedia systems rely on research progress in a broad range of areas such as user profiling and modeling, acquisition, updating, and management of user models, group modeling, and community-based profiling, recommender systems, and recommendation strategies, data mining for personalization, the Semantic Web, adaptive multimedia content authoring and delivery, ubiquitous computing environments, and Smart Spaces, personalization for the plethora of mobile devices such as PDAs, mobile phones, and other hand-held devices, and pragmatics such as privacy, trust, and security. Empirical studies of adaptive hypermedia and Web systems are also critical to informing future directions. The

*Knowledge Engineering: Practice and Patterns* Philipp Cimiano, H. Sofia Pinto, 2010-10-06 Knowledge Management and Knowledge Engineering is a fascinating field of research these days In the beginning of EKAW the modeling and acquisition of knowledge was the privilege of or rather a burden for a few knowledge engineers familiar with knowledge engineering paradigms and knowledge representation formalisms While the aim has always been to model knowledge declaratively and allow for reusability the knowledge models produced in these early days were typically used in single and very specific applications and rarely changed Moreover these models were typically rather complex and they could be understood only by a few expert knowledge engineers This situation has changed radically in the last few years as clearly indicated by the following trends The creation of even formal knowledge is now becoming more and more collaborative Collaborative ontology engineering tools and social software platforms show the potential to leverage the wisdom of the crowds or at least of the many to lead to broader consensus and thus produce shared models which qualify better for reuse A trend can also be observed towards developing and publishing small but high impact vocabularies e.g. FOAF DublinCore GoodRelations rather than complex and large knowledge models
