

Chapter 1: Industrial Organization: What, How and Why?

Problem 1

Many examples imperfectly competitive markets are possible. Common ones include: (1) Automobiles, (2) Beer, (3) Telephone/Telecommunications, (4) Jet Aircraft, (5) Patented Pharmaceuticals, and (6) Computer Operating Systems. Large entry costs, scale economics, network effects and government regulations all play a role in these examples.

Problem 2

In a perfectly competitive market, each agent is a price taker. That is, decisions of individual firm and / or consumer do not affect the market price or environment. Therefore, there is no room for strategic behavior in a perfectly competitive market.

Problem 3

In general, the Clayton Act was designed to prevent monopoly "in its incipency" by making explicitly illegal a number of business practices. In particular, Section 2 prevents strategic manipulations of the upstream / downstream market by a firm with market power. Under Section 2 of the Clayton Act, it is illegal to "discriminate in price between different purchasers of commodities of like grade and quality". Section 7 was passed to prevent anti-competitive mergers.

Problem 4

If higher concentration leads to higher worker productivity, then industrial concentration can lower production cost, and therefore, horizontal mergers *may* improve economic efficiency.

Problem 5

Market dominance by one firm may be due to the firm's better performance, higher efficiency etc. Price fixing, however, does not indicate higher efficiencies for the participating firms. It simply hurts the consumers and reduces overall welfare.

Sunburnt Cities Justin B. Hollander, 2011-01-18 In recent years there has been a growing focus on urban and environmental studies and the skills and techniques needed to address the wider challenges of how to create sustainable communities Central to that demand is the increasing urgency of addressing the issue of urban decline and the response has almost always been to pursue growth policies to attempt to reverse that decline The track record of growth policies has been mixed at best Until the first decade of the twenty first century decline was assumed to be an issue only for former industrial cities the so called Rust Belt But the sudden reversal in growth in the major cities of the American Sunbelt has shown that urban decline can be a much wider issue Justin Hollander's research into urban decline in both the Sun and Rust Belts draws lessons planners and policy makers that can be applied universally Hollander addresses the reasons and statistics behind

these shrinking cities with a positive outlook arguing that growth for growth's sake is not beneficial for communities suggesting instead that urban development could be achieved through shrinkage Case studies on Phoenix Flint Orlando and Fresno support the argument and Hollander delves into the numbers literature and individual lives affected and how they have changed in response to the declining regions Written for urban scholars and to suit a wide range of courses focused on contemporary urban studies this text forms a base for all study on shrinking cities for professionals academics and students in urban design planning public administration and sociology

Small Business Enterprise Gavin Reid, 2002-09-11 The role of small business enterprise in a mature market economy is one of the major issues in contemporary industrial organization and is the focus of this book Small Business Enterprise brings new standards of rigour and insight into the study of small firms by importing contemporary ideas from industrial economics and by using up to date statistical and econometric techniques Based on a uniquely rich set of data Small Business Enterprise focuses on the early period after start up of the small firm It investigates competitive niches and how they are established determinants of growth

and profitability the factors fostering survival and many other central issues This core of economic analysis is complemented by an innovative case profile approach which considers the real behaviour of small firms in a competitive environment and a section on the political economy of small firms which looks at the ethics of competition and the enterprise culture [Seller Reputation](#) Heski Bar-Isaac, Steven Tadelis, 2008 Seller Reputation introduces a unifying framework that embeds a number of different approaches to seller reputation incorporating both hidden information and hidden action This framework is used to stress that the way in which consumers learn affects both behavior and outcomes In particular the extent to which information is generated and socially aggregated determines the efficiency of markets After reviewing these theoretical building blocks Seller Reputation examines several applications and empirical concerns It highlights that the environment in which a transaction is embedded helps determine whether the transaction will occur and how parties will behave Institutions ranging from the design of online markets to norms in a community can be understood as ensuring that concerns for reputation lead to more efficient outcomes Similarly the desire to affect consumer beliefs regarding the firm's incentives can help us understand strategic firm decisions that seem unrelated to the particular transactions they wish to promote Seller Reputation concludes by considering slightly different models of reputation that lie beyond the scope of this framework briefly reviewing the somewhat sparse empirical literature and suggesting future directions for research
