Electric Field and Structural Effects in f-Electron Systems Jack E. Crow, 2012-12-06 Perhaps the title of this conference Crystalline Electric Field and Structural Effects in f Electron Systems reflects best the growth and direction of the field The title and the conference itself go beyond CEF in two broad and important respects First the inter relations between CEF and mode softening distortions due to quadrupolar ordering or the Jahn Teller effect have gained greater focus hence the inclusion of Structural Effects Second much greater emphasis on the actinides and in particular comparisons between actinides and the lighter rare earths is seen in this conference hence the more general terminology f Electron Systems It seems clear that this comparison will lead to an extension to the actinides of mixed valence and Kondo considerations as well as CEF effects The emergence of a broader discipline which includes all f electron systems and which is concerned with unstable as well as stable valence reflects the maturation of the field and a coming to grips with the complexity as well as the unity of f electron systems This maturation is also seen in the growing realization of the effects of CEF on transport thermodynamic properties and superconductivity and its co existence with magnetic order This volume contains 63 articles all but two of which were presented at the Conference held in Philadelphia U S A on 12 15 November 1979 About 100 conferees from 13 countries attended the meeting which consisted of four full days of lecture presentations
