A Concise Course in Algebraic Topology J. P. May, 1999-09 Algebraic topology is a basic part of modern mathematics and some knowledge of this area is indispensable for any advanced work relating to geometry including topology itself differential geometry algebraic geometry and Lie groups This book provides a detailed treatment of algebraic topology both for teachers of the subject and for advanced graduate students in mathematics either specializing in this area or continuing on to other fields J Peter May s approach reflects the enormous internal developments within algebraic topology over the past several decades most of which are largely unknown to mathematicians in other fields But he also retains the classical presentations of various topics where appropriate Most chapters end with problems that further explore and refine the concepts presented The final four chapters provide sketches of substantial areas of algebraic topology that are normally omitted from introductory texts and the book concludes with a list of suggested readings for those interested in delving further into the field

Tropical Geometry and Mirror Symmetry Mark Gross, 2011-01-20 Tropical geometry provides an explanation for the remarkable power of mirror symmetry to connect complex and symplectic geometry The main theme of this book is the interplay between tropical geometry and mirror symmetry culminating in a description of the recent work of Gross and Siebert using log geometry to understand how the tropical world relates the A and B models in mirror symmetry The text starts with a detailed introduction to the notions of tropical curves and manifolds and then gives a

thorough description of both sides of mirror symmetry for projective space bringing together material which so far can only be found scattered throughout the literature Next follows an introduction to the log geometry of Fontaine Illusie and Kato as needed for Nishinou and Siebert s proof of Mikhalkin s tropical curve counting formulas This latter proof is given in the fourth chapter The fifth chapter considers the mirror B model side giving recent results of the author showing how tropical geometry can be used to evaluate the oscillatory integrals appearing The final chapter surveys reconstruction results of the author and Siebert for integral tropical manifolds A complete version of the argument is given in two dimensions **Having Our Say** Sarah Louise Delany,Annie Elizabeth Delany,Amy Hill Hearth,1993 Chronicles the experiences of two African American women growing up in North Carolina at the turn of the century Algebra and Algebraic Thinking in School Mathematics Carole E. Greenes,2008 Examines the status of algebra in our schools and the changes that the curriculum has undergone over the past several years Includes successful classroom practises for developing algebraic reasoning abilities and improving overall understanding **Introduction to Modern Cryptography** Jonathan Katz,Yehuda Lindell,2020-12-21 Now the most used textbook for introductory cryptography courses in both mathematics and computer science the Third Edition builds upon previous editions by offering several new sections topics and exercises The authors present the core principles of modern cryptography with emphasis on formal definitions rigorous proofs of security Mathematics for Computer Science Eric Lehman,F.
