A notable contribution to our understanding of ourselves. This book explores the realm of human behavior in social situations and the way that we appear to others. Dr. Goffman uses the metaphor of theatrical performance as a framework. Each person in everyday social intercourse presents himself and his activity to others, attempts to guide and control the impressions they form of him, and employs certain techniques in order to sustain his performance, just as an actor presents a character to an audience. The discussions of these social techniques offered here are based upon detailed research and observation of social customs in many regions. This book explores in-depth the need for self-esteem, the nature of that need, the conditions of fulfillment, and how self-esteem (or lack of it) affects our values, responses, and goals. "If you are reading this, count yourself lucky to have found this book. It contains some of the most fascinating information and material you will ever read." —New York Times best-selling author Jack Canfield

Self-Intelligence is the self-help book for people who long to transform their lives and who trust only proven scientific tools, but also prefer page-turners to dry prose. Cutting-edge brain science meets superb storytelling as readers learn proven techniques to break through inner gridlock, sustain high performance, and achieve their dreams. All of this is possible due to neuroplasticity, the revolutionary discovery that we can literally re-form our brains by strategically choosing our thoughts, actions, and experiences. First came emotional intelligence, then came social intelligence. Here, at last, Self-Intelligence provides the big picture, incorporating the latest research from diverse scientific fields. Mental coach, transformational trainer, and science addict Jane Ransom lays out for you the new Self-Intelligence™ model, which she has used to help countless clients achieve the positive change they previously found impossible. You'll be uplifted, motivated to move forward, and simply fascinated. The author, who also is a master hypnotist, devotes a riveting chapter to the art and science of hypnosis. Throughout the book, she shares intriguing behind-the-curtain glimpses of its applications. By following the easy, clear precepts of Self-Intelligence, you can finally achieve your true potential and take the scientific short-cuts to greater success. You'll be empowered to avert old obstacles because the five-part model addresses your entire being, from the hidden depths of your subconscious self to your striving self, who sets and achieves tangible goals. Many of us have a tendency to measure our self-worth by comparing ourselves to others. But when we fail to reach our own, families, communities or societies 'ideals' this often results in feelings of inadequacy, anxiety and low mood. We may become self-critical, experience shame and a sense of being different from others. Although an improvement in 'self-esteem' is what we may feel we want this is not necessarily what we need. This is because self-esteem is often associated with times when things are going well but can fail us when things do not go to plan. In contrast self-confidence, built from self-compassion, can help us when things are going well and make us more resilient when things are difficult. This book uses the ideas and practices of Compassion Focused Therapy to help build self-confidence. Attention is also paid to difficulties that often come hand in hand with lack of self-confidence such as anxiety, depression, substance use and anger. Helping clients cope with problems of self is an important goal of modern psychotherapy. However, without ways of understanding or measuring the self and self-relevant behavior, it's difficult for psychologists and researchers to determine if intervention has been effective. From a modern contextual behavioral point of view, the self develops in tandem with the ability to take perspective on one's own and other people's behavior. This collection of articles by Steven Hayes, Kelly Wilson, Louise McHugh, Ian Stewart, and other leading researchers begins with a complete history of psychological approaches to understanding the self before presenting contemporary accounts that examine the self and perspective taking from behavioral, developmental, and cognitive perspectives. The articles in *The Self and Perspective Taking* also explore the role of the self as it relates to acceptance and commitment therapy, cognitive behavior therapy, and mindfulness processes. Featuring work from world-renowned psychologists, this resource will help clinicians augment self-understanding in clients, especially those with autism spectrum disorders, schizophrenia, and impaired perspective-taking abilities. Research on the self relates to various phenomena including self-esteem, self-concept, self-verification, self-awareness, identity, self-efficacy, passion, self-determination, and goals. Moreover, research on self is multidisciplinary and of interest to a broad range of areas, such as education, economics, (social) psychology, neuro sciences, motivation, physical activity and behavior sciences, philosophy, and learning sciences. Chapters in this volume will illustrate some of the best of the research within these disciplines examining different aspects of self from various perspectives. A feature of this volume is that we will explore not only positive aspects of high perceived levels of self-determination and competence or self-concept on achievement, motivation and wellbeing, but also the dark side of an uncertain and negative self on identity and wellbeing. We learn from this that the self is a dynamic and powerful, yet fragile and highly amenable construct that needs self-care and constant reassurance. SELF – A Multidisciplinary Concept thus highlights the broad application of self-research and its diversity. This volume is intended to develop both theoretical and methodological ideas and to present empirical evidence of various disciplines and applications dealing with self. The scope of this seventh volume of the International Advances in Self Research series, started in 2000 by Herbert W. Marsh, Dennis M. McInerney, and Rhonda G. Craven, is thus very broad. Keeping within the tradition of the series, this volume will highlight the applicability of a multitude of empirical approaches and methods to self-research. We also aimed to maintain a balance between discussing theoretical research in SELF and deriving implications for effective practice. This volume thus includes chapters covering self-related topics within an educational, social, emotional, psychological, physiological, managerial, and health context. Discusses how to encourage psychic development in the contemporary world and examines the psychoanalytic theories of Carl Jung. Contemporary research supports the importance of spirituality for mental health. Counselors, social workers, psychologists and other therapists wonder how to include spirituality in treatment. Mental health training and current treatment models do not equip clinicians to adequately address the topic of spirituality. *The Integrated Self* presents a model for identifying and assessing spirituality within the client's own life and experience. By operationally defining spirituality as a dimension of the client's experience, *The Integrated Self* explores the role of culture, values, beliefs, and lifestyle for understanding the spiritual dimension of the person. Using case studies, clinicians learn how to implement the model of the integrated self within their existing theoretical orientation. *The Integrated Self* also includes discussions on the approaches for spiritual assessment and ethical issues related incorporating spirituality in mental health treatment. While other books focus on religious beliefs, spiritual practices, or formulations of a general kind of spirituality, *The Integrated Self* provides a model for a holistic approach that can be adapted in both mental health and health care settings. A truly remarkable explosion of interest in the self has taken place in the past two decades, in psychology and related disciplines. This book presents a wide range of recent work on the self, from self-awareness in chimpanzees to multiple-personality disorders, self-esteem in adolescents, as well as fundamental issues going back to the work of James, Cooley and others. Three main groups or clusters of themes emerge. The first cluster consists of chapters that discuss the organization and coherence of the self; the second one deals with self-awareness and self-deception; and the third one examines, in new ways, the question of the relationship between self and other. While it is difficult to predict exactly where future work on the self will lead scholars, this work points in some significant directions and provides a firm reference in the field. A practical, hands-on book that presents the principles and techniques of behavior self-management. It reinforces basic skills with the tools readers

need to perform self-management on a behavior of their own they wish to change. Psychology of Adjustment: An Applied Approach delivers the fundamentals of personal behavior change through practical strategies readers need to change or control their own behavior. Provides practical, real-world examples within a step-by-step approach to personal problem management and follows that up with a useful, day-to-day guide to personal self-management techniques. A valuable book for any professional involved in helping others to affect a change in personal behavior, self-management, or self-control. Also useful in a high school course covering personal adjustment. "Understanding Yourself reaches beyond the boundaries of the outer personality into the infinite world of the psyche. This insightful work offers unique spiritual perspectives on how to master the components of being—the ego, karma, and the Self beyond the self. Most importantly, it helps us listen to the voice of the soul and bring its universal wisdom to play in our lives. In this guidebook to self-discovery, you will about energy levels and the potential of the Self, keys to identifying with your real self, controlling moods and spiritualizing your consciousness, the memory of the soul, educating the heart and more." Shame is one of our most central feelings and a universal human characteristic. Why do we experience it? For what purpose? How can we cope with excessive feelings of shame? In this elegant exposition informed by many years of helping people to understand feelings of shame, leading Jungian analyst Mario Jacoby provided a comprehensive exploration of the many aspects of shame and showed how it occupies a central place in our emotional experience. Jacoby demonstrated that a lack of self-esteem is often at the root of excessive shame, and as well as providing practical examples of how therapy can help, he drew upon a wealth of historical and cultural scholarship to show how important shame is for us in both its individual and social aspects. This Classic Edition includes a new foreword by Marco Della Chiesa. I welcome you to embark on a journey of self discovery. Life is all about experiencing anything and everything. As this world is constantly evolving and changing, we must adapt to become the possible versions of ourselves in order to keep up. This is what it means to be The Best You! "Clear, lucid and powerful! The Elegant Self is a must read if you are interested in the further reaches of development." - Ken Wilber author of The Integral Vision Grow Beyond Conventional Adulthood and Distinctively Give Your Gifts. The Elegant Self offers a unique perspective on the future of you. Explore adulthood through a new lens as you tour the many dangers facing our world today. Gain rare clarity into some of the highest stages of development. Learn how the trap of completeness may be holding your influence in the world back in virtually every facet of life. Enjoy this rare invitation into the courage for you to become more of an elegant self. - Save thousands of dollars by understanding the origin of inadequacy. - Go beyond the limitations of the autonomous self most adults are stuck in. - Free yourself from the trap of completeness. - Leverage paradox to fuel greater influence and impact in the world. - Discover never-before-seen ways to free yourself from limiting habits. Robert Lundin McNamara is a professor of developmental psychology in Boulder, Colorado and is a highly respected authority on the higher reaches of adulthood. Rob is author of Strength To Awaken, a speaker, performance coach, psychotherapist, and expert in helping high-achieving adults make greater impact in their lives. Educators today are facing challenges and demands like never before. The tensions between an educator's calling and the reality of the profession can create a growing sense of compassion fatigue, burnout, and job dissatisfaction. In light of this context, this book brings firsthand knowledge alongside research to encourage, equip, and empower teachers and other K-12 educators to find relief and hope. Taking a trauma-sensitive approach, this important resource will help you navigate the pressures of being an educator, whether you entered into your profession carrying wounds with you, have felt wounded from your work environment, or you are simply someone trying to support others. Packed with doable strategies and suggestions for personal and professional self-care, this book will help you discover a personal journey towards holistic health, job satisfaction, and most importantly, hope! Miss-conception of achieving happiness from worldly objects through wealth, health, prestige and power and being ignorant of vast unfathomable ocean of bliss in Self-realization is the cause of suffering and bondage in the circle of life and death..This eternal truth preached by Upanishads along with four measures—?????,?????,??? ????? -?????????— to be adopted for being eligible for self -realization and thereafter meditating on four Mahavakyas ---???? ????? ????? - --??? ??????????---????????? -????????? ??????—extracted one from each of four Vedas –is the only way to feel eternal Bliss and to be free from bondage of life and death. --- has been explained by me in my two books ---Aatm-chintnam in Hindi and “An Approach to self in English. Richard Bednar and Scott Peterson focus on showing how recognizing and eliminating avoidant behaviors and learning to confront fears realistically can lead to higher self-esteem. In the course of their research, the authors found that low self-esteem is a common element in different types of disordered behavior and present coping skills and a therapeutic approach to improve self-esteem. Learn different ways of how to integrate nature's wisdom into your life. The author shares many tools for stress management with examples and a clear approach based on the five elements. Personality Psychology: A Student-Centered Approach by Jim McMartin organizes the field of personality psychology around basic questions relevant to the reader's past, present, and future selves. Answers to the questions are based on findings from up-to-date research and shed light on the validity of personality theories to help students deepen their understanding of their own personalities. Concise, conversational, and easy-to-understand, the Second Edition is enhanced with new chapters, new research that reflects the latest scholarship, and new photos and illustrations throughout. TABLE OF CONTENTS: Introduction 2. idealizing transference 3. a clinical illustration of idealizing transference 4. clinical and therapeutic aspects of the idealizing transference 5. types of mirror transference: a classification according to developmental considerations 6. types of mirror transferences: a classification according to genetic dynamic considerations 7. the therapeutic process in the mirror transference 8. general remarks about narcissistic transferences 9. clinical illustration of the narcissistic transference 10. some reactions of the analyst to the idealizing transference 11. some reactions of the analyst to the mirror transference 12. some therapeutic transformations in the analysis of narcissistic personalities. Everybody loves to talk about themselves. And everybody loves to ask questions about other people. In The Crucial Questions' it is actually possible for the readers, by asking questions of his or her self, to create a self-portrait and a realistic assessment of who he or she really is. There are a voluminous number of self-help books where someone else is doing the teaching. This extraordinary little book allows you to design a new you by first understanding the old one. It is a powerful tool for an effective and practical reshaping of one's life. You can create your own reality. Know yourself, then understand where you want to go. The rest is easy. First Published in 2000. Routledge is an imprint of Taylor & Francis, an informa company. The author of Self-Compassion follows up her groundbreaking book with new ideas that expand our notion of self-kindness and its capacity to transform our lives, showing women how to balance tender self-acceptance with fierce action to claim their power and change the world. Kristin Neff changed how we talk about self-care with her enormously popular first book, Self-Compassion. Now, ten years and many studies later, she expands her body of work to explore a brand-new take on self-compassion. Although kindness and self-acceptance allow us to be with ourselves as we are, in all our glorious imperfection, the desire to alleviate suffering at the heart of this mindset isn't always gentle, sometimes it's fierce. We must also act courageously in order to protect ourselves from harm and injustice, say no to others so we can meet our own needs, and motivate necessary change in ourselves and society. Gender roles demand that women be soft and nurturing, not angry or powerful. But like yin and yang, the energies of fierce and tender self-compassion must be balanced for wholeness and wellbeing. Drawing on a wealth of research, her personal life story and empirically supported practices, Neff demonstrates how women can use fierce and tender self-compassion to succeed in the workplace, engage in caregiving without burning out, be authentic in relationships, and end the silence around sexual harassment and abuse. Most women intuitively recognize fierceness as part of their true nature, but have been discouraged from developing it. Women must reclaim their power in order to create a healthier society and find lasting happiness. In this wise, caring, and enlightening book, Neff shows women how to reclaim balance within themselves, so they can help restore balance in the world. We live in the digital age where our sense of self and identity has moved beyond the body to encompass hardware and software. Cyborgs, online representations in social media, avatars, and virtual reality extend our notion of what it means to be human. This approachable book looks at the progression of self from the biological to the technological using a multidisciplinary approach. It examines the notion of personhood from philosophical, psychological, neuroscience, robotics, and artificial intelligence perspectives, showing how the interface between bodies, brains, and technology can give rise to new forms of human identity. Jay Friedenberg present the content in an organized and easy-to-understand fashion to facilitate learning. A gifted researcher, author, and classroom teacher, he is one of the most influential voices in the field of artificial psychology. Leading theorists examine the self-representational theory of consciousness as an alternative to the two dominant reductive theories of consciousness, the representational theory of consciousness and the higher-order monitoring theory. In this pioneering collection of essays, leading theorists examine the self-representational theory of consciousness, which holds that consciousness always involves some form of self-awareness. The self-representational theory of consciousness stands as an alternative to the two dominant reductive theories of consciousness, the representational theory of consciousness (RTC) and the higher-order monitoring (HOM) theory, combining elements of both RTC and HOM theory in a novel fashion that may avoid the fundamental deficiencies of each. Although self-representationalist views have been common throughout the history of both Western and Eastern philosophy, they have been largely neglected in the recent literature on consciousness. This book approaches the self-representational theory from a range of perspectives, with contributions from scholars in analytic philosophy, phenomenology, and history of philosophy, as well as two longer essays by Antonio Damasio and David Rudrauf and Douglas Hofstadter. The book opens with six essays that argue

broadly in favor of self-representationalist views, which are followed by five that argue broadly against them. Contributors next consider connections to such philosophical issues as the nature of propositional attitudes, knowledge, attention, and indexical reference. Finally, Damasio and Rudrauf link consciousness as lived with consciousness as described in neurobiological terms; and Hofstadter compares consciousness to the "strange loop" of mathematical self-reference brought to light by Gödel's incompleteness theorems. Contributors Andrew Brook, Peter Carruthers, Antonio Damasio, John J. Drummond, Jason Ford, Rocco J. Gennaro, George Graham, Christopher S. Hill, Douglas R. Hofstadter, Terry Horgan, Tomis Kapitan, Uriah Kriegel, Keith Lehrer, Joseph Levine, Robert W. Lurz, David Rudrauf, David Woodruff Smith, John Tienson, Robert Van Gulick, Kathleen Wider, Kenneth Williford, Dan Zahavi In this sequel to Lichtenberg's *Psychoanalysis and Motivation* (TAP, 1989), the authors show how their revised theory of motivation provides the foundation for a new approach to psychoanalytic technique. The approach in *Self and Motivational Systems* emphasizes a finely honed sensitivity to moment-to-moment analytic exchanges and an appreciation of which motivational system is dominant during that exchange. Throughout, the authors stress the creative power of psychoanalysis as a joint effort shaped by the intersubjective context of a particular analysis and communicating and interacting with a particular analyst. At the heart of the analytic relationship is the analyst's expectation of evoking a vitalizing self-object experience from the analyst and the analyst's expectation, in turn, of evoking a self-object experience of efficacy from his or her work with the analyst. In this profound work, Vittorio Guidano expands upon his earlier seminal contributions on the application of cognitive and developmental principles to individuals struggling with various forms of psychopathology. Here, he fully develops the idea that individuals' experience, both positive and negative, are powerfully influenced by their personal psychological organizations. Focusing primarily on the eating disorders, the phobias (with agoraphobia as the prototype) obsessive-compulsive patterns, and depression, Guidano illustrates how early developmental experiences and ongoing psychological processes may collude to perpetuate dysfunctional patterns and personal distress. The central and perhaps most exciting thesis in this new expression of Guidano's thinking is that the "deep structure" or "core organizing processes" that constrain human psychological experience may be at the heart of successful intervention as well as the classical problems of resistance, relapse, and refractory behaviors. Guidano's contention is at once simple and powerful: those psychological processes involved in the development and maintenance of personal identity, or "self" that should be the primary foci of research and intervention in psychological disorders. The meaning of Guidano's perspective for clinical practice is perhaps best expressed in the author's own words: "Knowing the basic elements of the personal cognitive organization that underlie the pattern of disturbed behavior and emotions, the therapist can behave, from the beginning, in such a way as to build a relationship as effective as possible for that particular client. In other words, the therapist should be able to establish a relationship that respects the client's personal identity and systemic coherence and that, at the same time, does not confirm the basic pathogenic assumptions. For example, in working with agoraphobics, the therapist has to respect their self-images centered on the need to be in control. He/she can do this by avoiding any direct attack on their controlling attitudes and by leaving them a wide margin of control in the relationship. At the same time the therapist should avoid confirming their assumptions about the somatic origin of their emotional disturbances or about their inborn fragility. In short, the therapist who can anticipate the models of self and reality tacitly entertained by the client is surely better able to help the development of a cooperative and secure therapeutic relationship than the therapist who cannot make such anticipations. This timely and provocative volume offers exciting new ideas about how to conceptualize and facilitate change in the "self system." With the rare combination of his Renaissance intellect and integrative practical expertise, Guidano has been able to draw together many disparate themes from object relations theory, ego psychology, attachment theory, constructivist models of human cognition, and lifespan developmental psychology. It is a must reading for the practicing professional, the helping apprentice, and anyone interested in glimpsing the cutting edge at the growing interface between cognitive and clinical science. A balanced life is something we all yearn for, but it can only be honestly achieved through a balance of self. This important book gently and sensitively guides us towards our inner self and shows us step by step how we can rescue, resuscitate and nurture our real identity back to health. We are offered a life raft stocked with all the survival tools we need for our journey and a clear navigation chart with all the routes we may wish to take clearly signposted. Although written as a handbook for those who have lost their sense of self, this book is also a pick me up to revitalise the true essence of those of us who are jaded or slightly unwell. Now we have no more excuses to deny ourselves true happiness and fulfilment in all areas of our lives. First Published in 1985. Routledge is an imprint of Taylor & Francis, an informa company. "In this book, Marshall L. Silverstein applies a self psychological viewpoint, as formulated and broadened by Kohut, to understanding personality disorders. He recasts them as disorders of the self, grouping them into one of three patterns, centering on (a) combating devaluation, (b) forestalling fragmentation, or (c) seeking alternative pathways to a cohesive self. He describes each group, outlines its main theoretical viewpoints, and then offers a self psychological reformulation of how the behavior and symptom patterns represent deficits in self-cohesion."--Résumé de l'éditeur. Of all the judgments you make in life, none is as important as the one you make about yourself. The difference between low self-esteem and high self-esteem is the difference between passivity and action, between failure and success. Now, one of America's foremost psychologists and a pioneer in self-esteem development offers a step-by-step guide to strengthening your sense of self-worth. Here are simple, straightforward and effective techniques that will dramatically improve the way you think and feel about yourself. You'll learn: How to break free of negative self-concepts and self-defeating behavior. How to dissolve internal barriers to success in work and love. How to overcome anxiety, depression, guilt and anger. How to conquer the fear of intimacy and success. How to find -- and keep -- the courage to love yourself. And much more. As I begin to write this Preface, I feel a rush of excitement. I have now finished the book; my gestalt is coming into completion. Throughout the months that I have been writing this, I have, indeed, been intrinsically motivated. Now that it is finished I feel quite competent and self-determining (see Chapter 2). Whether or not those who read the book will perceive me that way is also a concern of mine (an extrinsic one), but it is a wholly separate issue from the intrinsic rewards I have been experiencing. This book presents a theoretical perspective. It reviews an enormous amount of research which establishes unequivocally that intrinsic motivation exists. Also considered herein are various approaches to the conceptualizing of intrinsic motivation. The book concentrates on the approach which has developed out of the work of Robert White (1959), namely, that intrinsically motivated behaviors are ones which a person engages in so that he may feel competent and self-determining in relation to his environment. The book then considers the development of intrinsic motivation, how behaviors are motivated intrinsically, how they relate to and how intrinsic motivation is extrinsically motivated behaviors, affected by extrinsic rewards and controls. It also considers how changes in intrinsic motivation relate to changes in attitudes, how people attribute motivation to each other, how the attribution process is motivated, and how the process of perceiving motivation (and other internal states) in oneself relates to perceiving them in others. This best-selling text teaches students and practitioners the essentials of body mechanics they need to know in order to care for themselves while practicing massage therapy. The text is written in a practical, playful, and friendly manner and integrates kinesthetic, cognitive, and environmental elements. This work proposes an integrative theory for understanding the major theoretical ideas being addressed in self-literature. The review of the literature provided within this integrative framework should help students and instructors to understand the complexity of self as a construct, and to understand the ramifications of this multi-faceted entity called self. Understanding self is an important first step in helping students understand others, and how and why people interact the way they do in social situations. First Published in 1985. This informative volume examines the clinical research linking normal separation-individuation with object relations theory and developmental psychopathology. It focuses on the core problem--the lack of a concept of the self-integrated with object relations theory. By adding a theory of the self to object relations theory, the book both enlarges and more acutely focuses the therapeutic perspective, thereby enhancing work with patients. It also further enables therapists to clarify their own real selves. Dr. Masterson's thesis is that, for the real self to finally emerge from the symbiotic union and assume its full capacities, identification, acknowledgment, and support are required from the mother and father in early development and from the therapist in psychotherapy. Dr. Masterson describes and illustrates the therapeutic technique of communicative matching and provides the necessary acknowledgment while maintaining therapeutic neutrality. Part I reviews psychoanalytic theory of the ego and the emerging real self; its structure, function, development, and its psychopathology and treatment. Part II explores the relationship between maternal libidinal acknowledgment and the development of the real self by a crosscultural comparison of child raising in Japan, Israel, and the United States. It then describes the influence of social and cultural factors on the functioning of the real self in the United States. Part III on Creativity and the Real Self draws upon fairy tales, Jean Paul Sartre, Edvard Munch, and the life and work of the novelist Thomas Wolfe to show how for some artists creativity becomes a crucial vehicle in their search to establish a real self. This section illuminates the nature of personal and artistic creativity and describes how a professional interest in the functioning of the real self leads inevitably to an interest in the ultimate of self-expression-creativity. Of special interest are the numerous case illustrations drawn from Masterson's extensive clinical work showing how acknowledgment and support enable the real self to fully emerge from the symbiotic union and to assume its full capacities.) A collection of previously published articles discussing the definition of suicide, analyses of its occurrence, and possible therapeutic responses. Appearing on the hundredth anniversary of the teaching of psychology at the University of Nebraska, this volume

represents a return to an earlier preoccupation with motivation and reflects a resurgence of interest in it. Eight professionals in psychology discuss the many sides of motivation. Mortimer Appley, president emeritus of Clark University, sees equilibrium, or homeostasis, as the fundamental motivational process. Douglas Derryberry and Don M. Tucker of the University of Oregon present a broad and basic model of motivation, viewing it as a product of the evolution and neural architecture of the human brain. Carole S. Dweck of Columbia University approaches personality development through motivational concepts, in particular goals related to self-image. Bernard Weiner of the University of California, Los Angeles, discusses the importance of one's perception of control over the causes of a situation or problem and over its management or solution. Albert Bandura of Stanford University is concerned with short- and long-term goals as they are affected by emotional states and a sense of self-efficacy. Similarly, Edward L. Deci and Richard M. Ryan of the University of Rochester consider the bearing of self-determination on motivation and achievement.
