Merchants of Medicines May 23 2023 The period from the late seventeenth to the early nineteenth century—the so-called long eighteenth century of English history—was a time of profound global change, marked by the expansion of intercontinental empires, long-distance trade, and human enslavement. It was also the moment when medicines, previously produced locally and in small batches, became global products. As greater numbers of British subjects struggled to survive overseas, more medicines than ever were manufactured and exported to help them. Most historical accounts, however, obscure the medicine trade's dependence on slave labor, plantation agriculture, and colonial warfare. In *Merchants of Medicines*, Zachary Dornier follows the earliest industrial pharmaceuticals from their manufacture in the United Kingdom, across trade routes, and to the edges of empire, telling a story of what medicines were, what they did, and what they meant. He brings to life business, medical, and government records to evoke a vibrant early modern world of London laboratories, Caribbean estates, South Asian factories, New England timber camps, and ships at sea. In these settings, medicines were produced, distributed, and consumed in new ways to help confront challenges of distance, labor, and authority in colonial territories. *Merchants of Medicines* offers a new history of economic and medical development across early America, Britain, and South Asia, revealing the unsettlingly close ties among medicine, finance, warfare, and slavery that changed people's expectations of their health and their bodies.

Lifestyle and Medicine in the Enlightenment Nov 16 2022 The biggest challenges in public health today are often related to attitudes, diet and exercise. In many ways, this marks a return to the state of medicine in the eighteenth century, when ideals of healthy living were a much more central part of the European consciousness than they have become since the advent of modern clinical medicine. Enlightenment advice on healthy lifestyle was often still discussed in terms of the six non-naturals – airs and places, food and drink, exercise, excretion and retention, and sleep and emotions. This volume examines what it meant to live healthily in the Enlightenment in the context of those non-naturals, showing both the profound continuities from Antiquity and the impact of newer conceptions of the body.
