Performance Tuning for 9i and 10g Gavin JT Powell,2003-12-29 There are three parts to tuning an Oracle database data modeling SQL code tuning and physical database configuration A data model contains tables and relationships between tables Tuning a data model involves normalization and de normalization Different approaches are required depending on the application such as OLTP or a Data Warehouse Inappropriate database design can make SQL code impossible to tune Poor data modeling can have a most profound effect on database performance since all SQL code is constructed from the data model Poorly written SQL code is often a culprit of performance problems and is expensive to rectify However tuning of SQL code is generally cheaper than changing the data model SQL code tends to be contained inside independent blocks within applications or stored procedures Physical database tuning involves hardware resource usage networking and various other Oracle things such as configuration and file distribution Physical configuration is often a culprit of poor performance where Oracle is installed with defaults and never altered by an expert Includes all three aspects of Oracle database tuning data model tuning SQL PL SQL code tuning physical plus configuration tuning Contains experienced guidance and real world examples using large datasets Emphasizes development as opposed to operating system perspective Modern Approaches for Intelligent Information and Database Systems Andrzej Sieminski,Adrianna Kozierekiewicz,Manuel Nunez,Quang Thuy Ha,2018-02-23 This book offers a unique blend of reports on both theoretical models and their applications in the area of Intelligent Information and Database Systems The reports cover a broad range of research topics including advanced learning techniques knowledge engineering Natural Language Processing NLP decision support systems Internet of things IoT computer vision and tools and techniques for Intelligent Information Systems They are extended versions of papers presented at the ACIIDS 2018 conference 10th Asian Conference on Intelligent Information and Database Systems which was held in Dong Hoi City Vietnam on 19 21 March 2018 What all researchers and students of computer science need is a state of the art report on the latest trends in their respective areas of interest Over the years researchers have proposed increasingly complex theoretical models which provide the theoretical basis for numerous applications The applications in turn have a profound influence on virtually every aspect of human activities while also allowing us to validate the underlying theoretical concepts MariaDB Crash Course Ben Forta,2011-08-29 MariaDB is a database server that offers drop in replacement functionality for MySQL Built by some of the original authors of MySQL with assistance from the broader community of free and open source software developers MariaDB offers a rich set of feature enhancements to MySQL including alternate storage engines server optimizations and patches MariaDB Crash Course teaches you all you need to know to be immediately productive with MariaDB Master trainer Ben Forta introduces all the essentials through a series of quick easy to follow hands

on lessons Instead of belaboring database theory and relational design Forta focuses on teaching solutions for the majority of users who simply want to interact with data Learn how to Retrieve and sort data Filter data using comparisons regular expressions and full text search Join relational data Create and alter tables Insert update and delete data Leverage the power of stored procedures and triggers Use views and cursors Manage transactional processing Create user accounts and manage security via access control
