**From Stars To Stalagmites: How Everything Connects** Paul S Braterman,2012-04-16 Feynman once selected as the single most important statement in science that everything is made of atoms It follows that the properties of everything depend on how these atoms are joined together giving rise to the vast field we know of today as chemistry In this unique book specifically written to bridge the gap between chemistry and the layman Braterman has put together a series of linked essays on chemistry related themes that are particularly engaging The book begins with the age of the earth and concludes with the life cycle of stars In between there are atoms old and new the ozone hole mystery and how it was solved synthetic fertilisers and explosives reading the climate record the extraction of metals the wetness of water and how the greenhouse effect on climate really works A chapter in praise of uncertainty leads on to the fuzziness and sharing of electrons and from there to molecular shape grass green and blood red the wetness of water and molecular recognition as the basis of life Organised in such a way as to illustrate and develop underlying principles and approaches this book will appeal to anyone interested in chemistry as well as its history and key personalities Where many other titles have failed this book succeeds brilliantly in capturing the spirit and essence of chemistry and delivering the science in easily digestible terms
