A **chemical reaction** causes the chemical compositions of substances to change. **Reactants** are substances that enter into a reaction. **Products** are substances produced in the reaction. **Theory** Gizmo does not experiment with factors that influence the rate at which reactants are transformed into products in a chemical reaction.

You will need blue, green, and orange markers or colored pencils for the first part of this activity.

- Look at the key at the bottom of the SIMULATION pane. In the space below, draw the two reactants and two products of this chemical reaction.

- Click Play (▶) and observe what you see?

*Reactant A is a blue and orange molecule. When Reactant A succeeds in breaking bonds of reactant B, the orange substance on Reactant B breaks off and bonds with Reactant A forming Product B, leaving the two green substance molecules which are Product A.*
