is proud to be a thought leader in the world of transport modelling planning and economics and has a wide range of opportunities for people with skills in these areas The evidence base and forecasts we deliver to effectively implement strategies and schemes are ever more data and technology focused a trend we have helped shape since the 1970 s but with particular disruption and opportunity in recent years As a result of these trends and to suitably skill the next generation of transport modellers we asked the world leading Institute for Transport Studies to boost skills in these areas and they have responded with a new MSc programme which you too can now study via this book Leighton Cardwell Technical Director WSP From processing and analysing large datasets to automation of modelling tasks sometimes requiring different software packages to talk to each other to data visualization SYSTRA employs a range of techniques and tools to provide our clients with deeper insights and effective solutions This book does an excellent job in giving you the skills to manage interrogate and analyse databases and develop powerful presentations Another important publication from ITS Leeds Fitsum Teklu Associate Director Modelling Appraisal SYSTRA Ltd Urban planning has relied for decades on statistical and computational practices that have little to do with mainstream data science Information is still often used as evidence on the impact of new infrastructure even when it hardly contains any valid evidence This book is an extremely welcome effort to provide young professionals with the skills needed to analyse how cities and transport networks actually work The book is also highly relevant to anyone who will later want to build digital solutions to optimise urban travel based on emerging data sources Yaron Hollander author of Transport Modelling for a Complete Beginner *Proceedings of the International Conference on Computing and Communication Systems* Arnab Kumar Maji,Goutam Saha,Sufal Das,Subhadip Basu,João Manuel R.
