Fundamental Concepts of Liquid-Propellant Rocket Engines Alessandro de Iaco Veris, 2020-09-26 This book is intended for students and engineers who design and develop liquid propellant rocket engines offering them a guide to the theory and practice alike. It first presents the fundamental concepts: the generation of thrust, the gas flow through the combustion chamber and the nozzle, the liquid propellants used and the combustion process, and then qualitatively and quantitatively describes the principal components involved: the combustion chamber, nozzle, feed systems, control systems, valves, propellant tanks, and interconnecting elements. The book includes extensive data on existing engines, typical values for design parameters, and worked out examples of how the concepts discussed can be applied, helping readers integrate them in their own work. Detailed bibliographical references including books, articles, and items from the gray literature are provided at the end of each chapter together with information on valuable resources that can be found online. Given its scope, the book will be of particular interest to undergraduate and graduate students of aerospace engineering. **Design of Liquid-fueled**

Structural Dynamics of Liquid Rocket Engines Andrew M. Brown, 2023-02-14 This is the first Structural Dynamics book focused on this indispensable aspect of liquid rocket engine design. This book begins by reviewing basic concepts in Structural Dynamics including the free and forced response of SDOF and MDOF systems along with some discussion of how numerical solutions are generated. The book then moves to a discussion of specific applications of these techniques in LREs progressing from component level turbomachinery and combustion devices up through engine system models and finally to integration with a launch vehicle. Clarifies specific topics including the Campbell and SAFE Diagrams for resonance identification in turbomachinery, the complications of component analysis in the pump side due to a host of complications.
