

How to Write a Formal Lab Report

Overview

Scientists share their findings through publications, primarily in the form of journal articles. To prepare for a career in science, one must be able to convey scientific results in the appropriate format. Your formal lab reports for this class should be organized like a scientific journal article and will be between 5-8 pages in length plus tables, figures and references.

Formatting

Reports must be typed, single sided and double spaced, on clean white paper that does not have writing on the back. Tables must be typed, and graphs must be prepared with Excel or another graphing program. Reports should be written in the style of a scientific journal article, with the sections listed below. An abstract is not required. Key features of each section are described below:

Title

- The title must be descriptive. The title of the lab exercise is not sufficient.

Introduction (no more than 1 page)

- Introduce the topic of the study.
- Begin the section with a concise description about the physiological process or phenomenon examined in your experiment.
- End by stating the hypothesis that will be examined and/or the goals of the study.
- Include information about the subjects used in the experiment. Did you perform the experiment on humans, dolphins, or cells? Did you use a computer simulation?
- Relevant background, sufficient to set up the question.
- This section should provide the reader with enough information to understand what you are doing and why you are doing it.
- Do not copy the experimental objectives from the lab instructions.
- Do not include detailed descriptions of physiological systems. Save them for the discussion, where you can relate them to your data.

From Research to Manuscript Michael Jay Katz, 2009-01-21 *Observations Plus Recipes* It has been said that science is the orderly collection of facts about the natural world Scientists however are wary of using the word fact Fact has the feeling of absoluteness and universality whereas scientific observations are neither absolute nor universal For example children have 20 deciduous baby teeth is an observation about the real world but scientists would not call it a fact Some children have fewer deciduous teeth and some have more Even those children who have exactly 20 deciduous teeth use the full set during only a part of their childhood When they are babies and toddlers children have less than 20 visible teeth and as they grow older children begin to lose their deciduous teeth which are then replaced by permanent teeth Children have 20 deciduous baby teeth is not even a complete scientific statement For one thing the statement children have 20 deciduous teeth does not tell us what we mean by teeth When we say teeth do we mean only those that can be seen with the unaided eye or do we also include the hidden unerupted teeth An observation such as children have 20 deciduous teeth is not a fact and by itself it is not acceptable as a scientific statement until its terms are explained scientifically children have 20 deciduous teeth must be accompanied by definitions and qualifiers [How to Write and Publish a Scientific Paper](#) Robert A.
