The Transmission of Affect Teresa Brennan, 2014-02-15 The idea that one can soak up someone else's depression or anxiety or sense the tension in a room is familiar. Indeed, phrases that capture this notion abound in the popular vernacular: negative energy dumping, you could cut the tension with a knife. *The Transmission of Affect* deals with the belief that the emotions and energies of one person or group can be absorbed by or can enter directly into another. The ability to borrow or share states of mind, once historically and culturally assumed, is now pathologized, as Teresa Brennan shows in relation to affective transfer in psychiatric clinics and the prevalence of psychogenic illness in contemporary life. To neglect the mechanism by which affect is transmitted, the author claims, has serious consequences for science and medical research. Brennan's theory of affect is based on constant communication between individuals and their physical and social environments. Her important book details the relationships among affect, energy, and new maladies of the soul, including attention deficit disorder, chronic fatigue syndrome, codependency, and fibromyalgia.

SMELL Andreas Philippopoulos-Mihalopoulos, Danilo Mandić, Caterina Nirta, Andrea Pavoni, 2023-12-04 Although somewhat marginal in relation to the other senses, smell is the most potent way of anchoring ourselves to the world. We subconsciously find our place in it by sniffing our body, the body of the one next to us, the room in which we are, the culture with which we are familiar. There is an incessant olfactory flow consisting of bodies, human and nonhuman, that are agents of generation, consumption, diffusion, reproduction, and dissolution of odours. As they move or pause, as they cluster with others or try to move away, these bodies constantly partake in this olfactory flow, this dense planetary swirl that leaves nothing outside. The law aims at presenting itself as rational and objective. Smell, on the other hand, is one of the least integrated senses in the legal edifice, in comparison to say, seeing and hearing. This can be attributed mainly to the fact that sense-making of smell and law are different, even antithetical. Smell operates undercurrent, tickling the olfactory antennas of individual and collective bodies while habitually hiding behind other sensory volumes. Law, on the other hand, has an interest in appearing present, universal, constant. Olfactory sense-making relies on its elusiveness; legal sense-making invests in its obviousness. Yet the two can interact in most unexpected ways, as this volume amply shows. If anything, smell airs the way in which law conceptualises and contextualises its own actuality. Smell brings law forth by allowing it to show its underbelly, its elusive sense-making that is invariably sacrificed in preference to the necessity of legal impressions of constancy. However, smell's fragmentary, discontinuous, and unstable nature, despite all the ordering that goes to it, poses a peculiar challenge to the law. This volume sets out to investigate this juncture.

Holy Madness Georg Feuerstein, 2013-10-09 This book traces the shadowy tradition of holy madness, crazy wisdom, from the Holy Fools of early

Christianity through the great adepts of India and Tibet up to the controversial gurus of today In our day when even the Dalai Lama has warned Western seekers to choose their teachers carefully Feuerstein provides an intelligent and cautionary guidebook to the guru disciple relationship plus a comprehensive analysis of the principles of authentic spirituality **To Be Good or Not To Be - English version** Richard Livingstone,2015-11-15 Why do things go wrong in our lives What causes the unbearable emptiness of our being From a philosophical point of view this book deals with important features of life itself of a typical human being of the upbringing of mankind and the risks involved Finally some concrete advice is given to correct what went wrong in that process *Sensory Design* Joy Monice Malnar, Frank Vodvarka,2004 What if we designed for all of our senses Suppose for a moment that sound touch and odor were treated as the equals of sight and emotion considered as important as cognition What would our built environment be like if sensory response sentiment and memory were critical design factors the equals of structure and program In *Sensory Design* Joy Monice Malnar and Frank Vodvarka explore the nature of our responses to spatial constructs from various sorts of buildings to gardens and outdoor spaces to constructions of fantasy To the degree that this response can be calculated it can serve as a typology for the design of significant spaces one that would sharply contrast with the Cartesian model that dominates architecture today In developing this typology the authors consult the environmental sciences anthropology psychology and architectural theory as well as the spatial analysis found in literary depiction Finally they examine the opportunities that CAVE and other immersive virtual reality technologies present in furthering a new sensory oriented design paradigm The result is a new philosophy of design that both celebrates our sensuous occupation of the built environment and creates more humane design A revolutionary approach to the built environment that embraces all of our senses and modes of understanding **Revelations in Air** Jude Stewart,2021-10-26 An extraordinary strange and startlingly beautiful exploration of smell the least understood of our five senses The nose on your face is the Buckingham Palace Guard of your body the maitre d of all taste as well as the seducer of your imagination and memory and Jude Stewart has charmed them all into a wicked poetic and illuminating tour of their mysterious domains Jack Hitt author of *Bunch of Amateurs* Overlapping with taste yet larger in scope smell is the sense that comes closest to pure perception Smell can collapse space and time unlocking memories and transporting us to worlds both new and familiar Yet as clearly as each of us can recognize different smells the bright tang of citrus freshly sharpened pencils parched earth after rain few of us understand how and why we smell In *Revelations in Air* Jude Stewart takes us on a fascinating journey into the weird and wonderful world of smell Beginning with lessons on the incredible biology and history of how our noses work Stewart teaches us how to use our noses like experts Once we re properly equipped and ready to sniff Stewart explores a range of smells from lavender cut grass and hot chocolate to cannabis and old books using smell as a lens into art history science and more With an engaging colorful design and exercises for readers to refine their own skills *Revelations in Air* goes beyond science or history or chemistry it s a doorway into the surprising pleasurable and unfamiliar landscape of smell

Popped Culture Andrew F. Smith, 2021-11-24 The history legends and cookery of America's favorite snack food Whether in movie theaters or sports arenas at fairs or theme parks around campfires or family hearths Americans consume more popcorn by volume than any other snack To the world popcorn seems as American as baseball and apple pie Within American food lore popcorn holds a special place for it was purportedly shared by Native Americans at the first Thanksgiving In *Popped Culture* Andrew F. Smith tests such legends against archaeological agricultural culinary and social findings While debunking many myths he discovers a flavorful story of the curious kernel's introduction and ever increasing consumption in North America Unlike other culinary fads of the nineteenth century popcorn has never lost favor with the American public Smith gauges the reasons for its unflagging popularity the invention of wire over the fire poppers commercial promotion by shrewd producers the fascination of children with the kernel's magical pop and affordability To explain popcorn's twentieth century success he examines its fortuitous association with new technology radio movies television microwaves and recounts the brand name triumphs of American manufacturers and packagers His familiarity with the history of the snack allows him to form expectations about popcorn's future in the United States and abroad Smith concludes his account with more than 160 surprising historical recipes for popcorn cookery including the intriguing use of the snack in custard hash ice cream omelets and soup

The Roamers Francesco Verso, 2023-05-09

From the award winning future thinker comes a Solar Punk novel packed with near future ideas from the streets of Rome with elements of David Mitchell's *Cloud Atlas* and *Into the Wild* by Jon Krakauer. The pulldogs, a group of people at the twilight of Western civilisation, undergo an anthropological transformation caused by the dissemination of nanites, nanorobots capable of assembling molecules to create matter. This technology changes the way they eat and gives rise to a culture which while reminiscent of an ancient nomadic society is creative and new. Liberation from the imperative of food combined with the ability to 3D print objects and use cloud computing makes it possible for the pulldogs to make a choice that seems impossible and anachronistic: a new life. But is it really an Arcadia?

The Ritual Theatre of Theodoros Terzopoulos Freddy Decreus, 2019-03-13. *The Ritual Theatre of Theodoros Terzopoulos* outlines the story of the Athenian based Attis Theatre and the way its founder and director Theodoros Terzopoulos introduced bio-energetic presences of the body on the stage in an attempt to redefine and reappraise what it means today: not only to have a body but to fully be a body. Terzopoulos created a very specific attitude towards life and death and it is this broad perspective on energy and consciousness that makes his work so appealing both to a general public and to students of arts, theatre and drama. Freddy Decreus' study charts the career of Greece's most acclaimed theatre director and provides a spiritual and philosophic answer in times where former Western meta-narratives have failed.

The Routledge Handbook of Attachment: Implications and Interventions Paul Holmes, Steve Farnfield, 2014-06-27. *The Routledge Handbook of Attachment: Implications and Interventions* offers an introduction to therapies produced as a result of the popularity of attachment studies. These therapies can be divided into two categories: those that are attachment based in that they use evidence based attachment assessments in their development or attachment informed in that the theories of attachment have been integrated into the practice of existing schools of therapy. The book reviews the field and provides a range of interventions for children, adults and parents, beginning with a detailed review of both evidence based and evidence informed interventions including individual psychotherapy, family therapy and parenting. The remaining chapters provide accounts from the practitioner's perspective of interventions that address issues of attachment from the level of one to one therapy, family and social work to social interventions involving courts and Care Proceedings, illustrated with examples from day to day practice. Discussing how an understanding of formal assessments of

attachment can be used to inform therapeutic social and legal interventions to assist and protect children The Routledge Handbook of Attachment Implications and Interventions is an indispensable guide for clinical psychologists psychiatrists and social workers working with children and families clinicians in training and students *The Body Electric* James Geary,2002 Marie a sixty three year old Belgian woman has been totally blind since the age of fifty seven But now thanks to electrodes implanted around her right optic nerve she can see lights shapes and colors again Marie is one of a handful of people around the world who have had computer chips implanted in their bodies to extend enhance or repair their senses The idea of actually melding man and machine still seems futuristic unlikely and a little scary But in *The Body Electric* James Geary examines the startling possibilities opened up by the merger of the biological and the technological This remarkable convergence holds the promise of restoring sight to the blind and mobility to the paralyzed It might also provide us with bionic senses such as the ability to see infrared radiation or feel objects at a distance By linking neurons in the brain directly to silicon chips scientists are also exploring the possibility of creating virtual eyes ears and limbs on the Internet and allowing people to control appliances by thought alone Machines too are getting silicon senses Researchers are endowing computers with the ability to see hear smell taste touch and conceivably think *The Body Electric* offers an accessible and astute survey of this exciting area of research with its potential commercial medical and military applications Drawing on fields as diverse as artificial intelligence and biology *The Body Electric* asks Are you any less you after a bionic implant If all of our senses are electronically enhanced how will we tell the difference between virtual reality and the actual world Will it matter The merger of our technology and ourselves is already beginning to change the way we see hear smell taste touch and think about the world opening the doors of perception just another crack **The Problem with Pleasure** Laura Frost,2013-07-16 A revealing study of the sensual tensions powering the period s formal and ideological innovations
