6 pages | 1410 words

Architecture and the environment help to shape one another so they must be describe together. To build architecture constructors take from the environment but both architecture and the environment serve the people of the world. To fully understand the interactions of architecture, the environment, and the effects of each on human behavior one must view as variables of one whole.

The Impact Physical Structures Have on Human Behavior

It only takes visiting a beautiful place like a Maine coast light house, a Scottish castle, or a villa in Greece to feel the profound affects it has on ones mental condition. Worries are melted away and the soul is refreshed. Lighter or brighter spaces tend to increase alertness and even guard against depression. Rooms that are intended for relaxation should have dark colors with carpeting and few sharp edges. Low ceilings typically improve focus on detail-oriented tasks where conversely high ceilings increase creativity. Views of nature such as trees and open green spaces significantly inspire creativity, concentration, and memory. Clearly, it is significant to construct buildings that are sensitive to the needs of a user and should also compensate for ones inability to spend time outside. Certain human populations spend more time indoors than outdoors, which can have an unpropitious effect ones well being, health, and even comfort. This is why it is so important to create indoor environments that suit and meet ones basic needs (Pultar, 1997).

Architecture Directing Human Behavior

Architecture not only influences human action but can also help to direct that action. Research has proven that the way a person lives can affect their social interaction with others. One study showed those who live in apartments that were close to one another were less interested in social interaction surrounding them and had possession of limited space. The interest for knowing what was around them was not present nor the need to share who they are with others. Places of worship and places of work are perfect examples of how architecture can impact human behavior. Churches specifically use designs and furniture when building a church that will elicit the appropriate response when the congregation is attending. However, doing this the reverence of the God they want others to understand and know about is an exciting learning experience that the people want to continue to come back and worship at that church. (Bro & Popow, 2000)

Environmental Psychological Implications of Design

Everyone is impacted to some degree by building design, so it is to no ones surprise that the involvement of environmental psychology in design is enormous. The way ones surroundings are arranged can provide either possibilities or limitations. Therefore, when creating any kind of space, it is very significant to know for what and who will use it. It is important to know where to build, how much space will be needed, and its purpose. The building needs to be matched with his or her user so that the best functionality can be established while meeting certain criteria such as quality, safety, and performance. Environmental...
