The contributions in this book bring together a diverse group of authors who explore a set of themes relating to the ethical dimensions of the agriculture and food futures, including the role of novel technologies, the potential issues raised by the use of biofuels, the ethics of future animal production systems, concepts of global food security, as well as chapters on food governance priorities and educational aspects. It is intended that this volume serves as an interesting collection and acts as a source of stimulation that will contribute to wider debate and reflection on the future of the agriculture and food system.
