of talented and dedicated people serve the forensic science community performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. **Strengthening Forensic Science in the United States: A Path Forward** provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. **Strengthening Forensic Science in the United States** gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call to action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors, and attorneys, and forensic science educators.

**LSD, My Problem Child** Albert Hofmann, 2017-09-27. This is the story of LSD told by a concerned yet hopeful father, organic chemist Albert Hofmann, Ph.D. He traces LSD's path from a promising psychiatric research medicine to a recreational drug sparking hysteria and prohibition. In **LSD My Problem Child** we follow Dr. Hofmann's trek across Mexico to discover sacred plants related to LSD and listen in as he corresponds with other notable figures about his remarkable discovery. Underlying it all is Dr. Hofmann's powerful conclusion that mystical experiences may be our planet's best hope for survival. Whether induced by LSD, meditation, or arising spontaneously, such experiences help us to comprehend the wonder, the mystery of the divine in the microcosm of the atom, in the macrocosm of the spiral nebula, in the seeds of plants, in the body and soul of people. More than

sixty years after the birth of Albert Hofmann's problem child his vision of its true potential is more relevant and more needed than ever

[The Emperor of All Maladies](#) Siddhartha Mukherjee, 2011-08-09 Winner of the Pulitzer Prize and a documentary from Ken Burns on PBS this New York Times bestseller is an extraordinary achievement The New Yorker a magnificent profoundly humane biography of cancer from its first documented appearances thousands of years ago through the epic battles in the twentieth century to cure control and conquer it to a radical new understanding of its essence Physician researcher and award winning science writer Siddhartha Mukherjee examines cancer with a cellular biologist's precision a historian's perspective and a biographer's passion The result is an astonishingly lucid and eloquent chronicle of a disease humans have lived with and perished from for more than five thousand years The story of cancer is a story of human ingenuity resilience and perseverance but also of hubris paternalism and misperception Mukherjee recounts centuries of discoveries setbacks victories and deaths told

through the eyes of his predecessors and peers training their wits against an infinitely resourceful adversary that just three decades ago was thought to be easily vanquished in an all out war against cancer The book reads like a literary thriller with cancer as the protagonist Riveting urgent and surprising The Emperor of All Maladies provides a fascinating glimpse into the future of cancer treatments It is an illuminating book that provides hope and clarity to those seeking to demystify cancer

**One Hundred Years of Chemical Warfare: Research, Deployment, Consequences** Bretislav Friedrich,Dieter Hoffmann,Jürgen Renn,Florian Schmaltz,Martin Wolf,2017-11-26 This book is open access under a CC BY NC 2 5 license On April 22 1915 the German military released 150 tons of chlorine gas at Ypres Belgium Carried by a long awaited wind the chlorine cloud passed within a few minutes through the British and French trenches leaving behind at least 1 000 dead and 4 000 injured This chemical attack which amounted to the first use of a weapon of mass destruction marks a turning point in world history The preparation as well as the execution of the gas attack was orchestrated by Fritz Haber the director of the Kaiser Wilhelm Institute for Physical Chemistry and Electrochemistry in Berlin Dahlem During World War I Haber transformed his research institute into a center for the development of chemical weapons and of the means of protection against them Bretislav Friedrich and Martin Wolf Fritz Haber Institute of the Max Planck Society the successor institution of Haber s institute together with Dieter Hoffmann Jürgen Renn and Florian Schmaltz Max Planck Institute for the History of Science organized an international symposium to commemorate the centenary of the infamous chemical attack The symposium examined crucial facets of chemical warfare from the first research on and deployment of chemical weapons in WWI to the development and use of chemical warfare during the century hence The focus was on scientific ethical legal and political issues of chemical weapons research and deployment including the issue of dual use as well as the ongoing effort to control the possession of chemical weapons and to ultimately achieve their elimination The volume consists of papers presented at the symposium and supplemented by additional articles that together cover key aspects of chemical warfare from 22 April 1915 until the summer of 2015 *Creations of Fire* Cathy Cobb,Harold Goldwhite,2013-11-11 The history of chemistry is a story of human endeavor and as a result as human nature itself Progress has been made in fits and starts and it has come from all parts of the globe Because the scope of this history is considerable some 100 000 years it is necessary to impose some order and we have organized the text around three discernible albeit gross divisions of time Part 1 Chaps 1 7 covers 100 000 BCE Before Common Era to the late 1700s and presents the background of the Chemical Revolution Part 2 Chaps 8 14 covers the late 1700s to World War I and presents the Chemical Revolution and its consequences Part 3 Chaps 15 20 covers World War I to 1950 and presents the Quantum Revolution and its consequences and hints at revolutions to come There have always been two tributaries to the chemical stream experiment and theory But systematic experimental methods were not routinely employed until the 1600s and quantitative theories did not evolve until the 1700s and it can be argued that modern chemistry as a science did not begin until the Chemical Revolution in the 1700s xi xii PREFACE We argue

however that the first experiments were performed by artists and the first theories proposed by philosophers and that a revolution can be understood only in terms of what is being revolted against
