

Exploring the Scientific Method

The **scientific method** is a process that scientists use to better understand the world around them. It includes making observations and asking a question, forming a hypothesis, designing an experiment, collecting and analyzing data, and drawing a conclusion. This is sometimes also referred to as scientific inquiry. A **hypothesis** is a possible explanation for an observation. A good scientist will design a **controlled experiment** to test their hypothesis. In a controlled experiment, only one variable is tested at a time. It is called the **manipulated or independent variable**. The **experimental group** will test the **independent variable**. The **control group** will be left alone, so you have something to compare your results to. The variable that determines the data is the **responding, or dependent variable**. It responds to the manipulated variable. All other variables in the experiment should remain the same, because if you change more than one variable, you will not know which variable explained your results. Once something has been tested many different times by many different scientists, it can become a **scientific theory**. It is different from a **scientific law**, which describes what will happen every time under a particular set of conditions.

True or False

If the answer is true, write "true" on the line. If the answer is false, replace the underlined word or phrase with one that will make the sentence correct. Write the new word(s) on the line.

1. _____ Forming a hypothesis is the first step of the scientific method.
2. _____ A scientific law is different from a scientific theory because it describes something in nature without attempting to explain it.
3. _____ In order for a hypothesis to be testable, scientists need to be able carry out investigations that will either support or disprove it.
4. _____ The experimental group is the group that is left alone during the experiment.
5. _____ The manipulated variable is the same thing as the independent variable.

Reproducibility and Replicability in Science National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Committee on Science, Engineering, Medicine, and Public Policy, Board on Research Data and Information, Division on Engineering and Physical Sciences, Committee on Applied and Theoretical Statistics, Board on Mathematical Sciences and Analytics, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Division of Behavioral and Social Sciences and Education, Committee on National Statistics, Board on Behavioral, Cognitive, and Sensory Sciences, Committee on Reproducibility and Replicability in Science, 2019-10-20 One of the pathways by which the scientific community confirms the validity of a new scientific discovery is by repeating the research that produced it When a scientific effort fails to independently confirm the computations or results of a previous study some fear that it may be a symptom of a lack of rigor in science while others argue that such an observed inconsistency can be an important precursor to new discovery Concerns about reproducibility and replicability have been expressed in both scientific and popular media As these concerns came to light Congress requested that the National Academies of Sciences Engineering and Medicine conduct a study to assess the extent of issues related to reproducibility and replicability and to offer recommendations for improving rigor and transparency in scientific research Reproducibility and Replicability in Science defines reproducibility and replicability and examines the factors that may lead to non reproducibility and non replicability in research Unlike the typical expectation of reproducibility between two computations expectations about replicability are more nuanced and in some cases a lack of replicability can aid the process of scientific discovery This report provides recommendations to researchers academic institutions journals and funders on steps they can take to improve reproducibility and replicability in science

The Scientific Method and Its Limitations Fernando Sanford, 1899 [A Framework for K-12 Science Education](#) National Research Council, Division of Behavioral and Social Sciences and Education, Board on Science Education, Committee on a Conceptual Framework for New K-12 Science Education Standards, 2012-02-28 Science engineering and technology permeate nearly every facet of modern life and hold the key to solving many of humanity's most pressing current and future challenges The United States position in the global economy is declining in part because U S workers lack fundamental knowledge in these fields To address the critical issues of U S competitiveness and to better prepare the workforce A Framework for K 12 Science Education proposes a new approach to K 12 science education that will capture students interest and provide them with the necessary foundational knowledge in the field A Framework for K 12 Science Education outlines a broad set of expectations for students in science and engineering in grades K 12 These expectations will inform the development of new standards for K 12 science education and subsequently revisions to curriculum instruction assessment and professional development for educators This book identifies three dimensions that convey the core ideas and practices

around which science and engineering education in these grades should be built These three dimensions are crosscutting concepts that unify the study of science through their common application across science and engineering scientific and engineering practices and disciplinary core ideas in the physical sciences life sciences and earth and space sciences and for engineering technology and the applications of science The overarching goal is for all high school graduates to have sufficient knowledge of science and engineering to engage in public discussions on science related issues be careful consumers of scientific and technical information and enter the careers of their choice A Framework for K 12 Science Education is the first step in a process that can inform state level decisions and achieve a research grounded basis for improving science instruction and learning across the country The book will guide standards developers teachers curriculum designers assessment developers state and district science administrators and educators who teach science in informal environments

The Scientific Method Louis Frederick Fieser,1964 The author records episodes during World War II when he became involved in projects requiring incendiary devices of assorted and unconventional types Post war projects include development of devices for student experimentation and teaching He shows how the scientific method was used on a range of projects from designing a device to ignite oil slicks on water to creating a squirrel proof birdfeeder
