Jin Choi is Associate Professor of Economics in the Kellstadt Graduate School of Business at DePaul University (Chicago, Illinois). He specializes in teaching quantitative topics such as business mathematics, statistics, forecasting, and quantitative investment analysis. He also teaches topics on money and banking and serves as a member of the board of directors.

a \$555 million community bank in Chicago. He received the Excellence in Teaching award in 2007 from DePaul University and emphasizes practical theory in his teaching. In the past, practical applications motivated the development of mathematical theories, which then became the subject of pure mathematics where abstract concepts are studied for their own sake. The activity of applied mathematics is thus intimately connected with research in mathematics, which is also referred to as theoretical mathematics. *Theory and Applied Mathematics in International Business* is an essential research publication that explores the importance and implications of applied and theoretical mathematics within international business, including areas such as finance, general management, sales and marketing, and supply chain management.
