**Big Java** Feb 24 2021 Big Java: Early Objects, 7th Edition focuses on the essentials of effective learning and is suitable for a two-semester introduction to programming sequence. This text requires no prior programming experience and only a modest amount of high school algebra. Objects and classes from the standard library are used where appropriate in early sections with coverage on object-oriented design starting in Chapter 8. This gradual approach allows students to use objects throughout their study of the core algorithmic topics, without teaching bad habits that must be un-learned later. The second half covers algorithms and data structures at a level suitable for beginning students. Choosing the enhanced eText format allows students to develop their coding skills using targeted, progressive interactivities designed to integrate with the eText. All sections include built-in activities, open-ended review exercises, programming exercises, and projects to help students practice programming and build confidence. These activities go far beyond simplistic multiple-choice questions and animations. They have been designed to guide students along a learning path for mastering the complexities of programming. Students demonstrate comprehension of programming structures, then practice programming with simple steps in scaffolded settings, and finally write complete, automatically graded programs. The perpetual access VitalSource Enhanced eText, when integrated with your school's learning management system, provides the capability to monitor student progress in VitalSource SCORECenter and track grades for homework or participation. \*Enhanced eText and interactive functionality available through select vendors and may require LMS integration approval for SCORECenter.

Though staying away from dystopia, these stories are hardly free from conflict. Instead, they show how the human spirit can rise up to defeat war, disease, environmental disaster, and any other challenge that might come our way. There are stories that deal with advanced technology, a return to nature, alien contact, and even time travel. Themes include inclusivity, environmentalism, gender relations, and exploration.

*Beacon Fire and Shooting Star* Nov 15 2022 The Liang dynasty (502-557) is one of the most brilliant and creative periods in Chinese history and one of the most underestimated and misunderstood. Under the Liang, literary activities, such as writing, editing, anthologizing, and cataloguing, were pursued on an unprecedented scale, yet the works of this era are often dismissed as "decadent" and no more than a shallow prelude to the glories of the Tang. This book is devoted to contextualizing the literary culture of this era--not only the literary works themselves but also the physical process of literary production such as the copying and transmitting of texts; activities such as book collecting, anthologizing, cataloguing, and various forms of literary scholarship; and the intricate interaction of religion, particularly Buddhism, and literature. Its aim is to explore the impact of social and political structure on the literary world.
