Algorithms Jeff Erickson, 2019-06-13 Algorithms are the lifeblood of computer science They are the machines that proofs build and the music that programs play Their history is as old as mathematics itself This textbook is a wide ranging idiosyncratic treatise on the design and analysis of algorithms covering several fundamental techniques with an emphasis on intuition and the problem solving process The book includes important classical examples hundreds of battle tested exercises far too many historical digressions and exactly four typos Jeff Erickson is a computer science professor at the University of Illinois Urbana Champaign this book is based on algorithms classes he has taught there since 1998

Programming Challenges Steven S Skiena, Miguel A. Revilla, 2006-04-18 There are many distinct pleasures associated with computer programming Craftsmanship has its quiet rewards the satisfaction that comes from building a useful object and making it work Excitement arrives with the flash of insight that cracks a previously intractable problem The spiritual quest for elegance can turn the hacker into an artist There are pleasures in parsimony in squeezing the last drop of performance out of clever algorithms and tight coding The games puzzles and challenges of problems from international programming competitions are a great way to experience these pleasures while improving your algorithmic and coding skills This book contains over 100 problems that have appeared in previous programming contests along with discussions of the theory and ideas necessary to attack them Instant online grading for all of these problems is available from two WWW robot judging sites Combining this book with a judge gives an exciting new way to challenge and improve your programming skills This book can be used for self study for teaching innovative courses in algorithms and programming and in training for international competition The problems in this book have been selected from over 1 000 programming problems at the Universidad de Valladolid online judge The judge has ruled on well over one million submissions from 27 000 registered users around the world to date We have taken only the best of the best the most fun exciting and interesting problems available

Spectral Algorithms Ravindran Kannan, Santosh Vempala, 2009 Spectral methods refer to the use of eigenvalues eigenvectors singular values and singular vectors They are widely used in Engineering Applied Mathematics and Statistics More recently spectral methods have found numerous applications in Computer Science to discrete as well as continuous problems Spectral Algorithms describes modern applications of spectral methods and novel algorithms for estimating spectral parameters The first part of the book presents applications of spectral methods to problems from a variety of topics including combinatorial optimization learning and clustering The second part of the book is motivated by efficiency considerations A feature of many modern applications is the massive amount of input data While sophisticated algorithms for matrix computations have been developed over a century a more recent development is algorithms based on sampling on the fly from massive matrices Good estimates of singular values and low rank approximations of the whole matrix can be provably derived from a sample The main emphasis in the second part of the book is to present these sampling methods with rigorous error bounds It also presents recent extensions of spectral methods from matrices to tensors and their applications to some combinatorial optimization problems
