So What Do They Really Know? **Nov 25 2023** So What Do They Really Know? Cris Tovani explores the complex issue of monitoring, assessing, and grading students' thinking and performance with fairness and fidelity. As a teacher, Cris struggles to balance her student-centered instruction with school system mandates. Her recommendations are realistic and practical; she understands that what isn't manageable isn't sustainable. She describes the systems and structure she uses in her own classroom and shows teachers how to use them to monitor student growth and provide targeted feedback that enables students to master content goals. She shares ways to bring students into the assessment cycle so they can monitor their own learning, maximize

motivation and engagement. So What Do They Really Know? includes a wealth of information: Lessons from Cris's classroom Templates showing how teachers can use the workshop model to assess and differentiate instruction Student work, including samples from linguistically diverse learners, struggling readers, and bound seniors Anchor charts of student thinking Ideas on how to give feedback Guidelines that explain how conferring is different from monitoring Suggestions for assessing learning and differentiating instruction conferences Advice for managing ongoing assessment Cris's willingness to share her own struggles can be a hallmark of her work. Teachers will recognize their own students and the challenges they face as they go on the journey to figure out how to raise student achievement.

Nov 06 2021 "Love brings us in close, leads us to study the details of a text, and asks us to return again and again. These are the motivations and ideas that built this book." -Chris Lehman and Kate Roberts You and your students will fall for close reading. In *Falling in Love with Close Reading*, Christopher Lehman and Kate Roberts show us that it can be rigorous, meaningful, and joyous. You'll encourage students to not only analyze texts but to admire the craft of a beloved book, study favorite songs and poems, and challenge peers in evidence-based discussions. Chris and Kate start with a powerful three-step close-reading ritual that students can apply to any text. Then they lay out practical, engaging lessons that not only help students to independence in reading texts closely but also help them transfer this critical, analytical skill to other areas of their lives and even the lives they lead. Responsive to students' needs and field-tested in classrooms, these lessons offer strategies for close reading narratives, informational texts, and arguments suggestions for differentiating instruction anchor charts and student work from real classrooms connections to the Common Core State Standards a focus on viewing media and life in this same careful way. "We see the ritual of close reading not just as a method for the academic work of looking closely at text-evidence, word choice, and structure," write Chris and Kate but also an opportunity to bring those practices together to empower our students to see the subtle messages in the texts they read in their lives." Read *Falling in Love with Close Reading* and discover that the benefits and joy of close reading don't have to stop at the edge of the page. Read a sample from the book to learn more about Chris and Kate's close-reading ritual for students and for an annotated text that shows how it works.

Apr 23 2023 An understanding of psychology—specifically the psychology behind how users think, feel, and interact with digital interfaces—is perhaps the single most valuable nondesign skill a designer can have. The most elegant design can fail if it forces users to conform to the design rather than working within the constraints of how humans perceive and process the world around them. This practical guide explains how you can apply principles in psychology to build products and experiences that are more intuitive and human-centered. Jon Yablonski deconstructs familiar apps and experiences to provide clear examples of how UX designers can build experiences that adapt to how users perceive and process digital interfaces. You'll learn: How appealing design creates positive responses The principles from psychology most useful for designers How psychology principles relate to UX heuristics Predictive models including Fitts's law, Jakob's law, and Hick's law Ethical implications of using psychology in design A framework for applying these principles
