*Refrigeration and Air Conditioning* Nov 25 2023 Offers a comprehensive introduction to the theoretical principles and practical aspects of refrigeration and air conditioning systems. It begins by reviewing the physical principles of three pillars of refrigeration and air conditioning - thermodynamics, heat transfer, and fluid mechanics. Subsequent chapters provide exhaustive coverage of the principles, applications and design of several types of refrigeration systems and their associated components.

**Biodiversity, Biofuels, Agroforestry and Conservation Agriculture** Mar 06 2022 Sustainable agriculture is a rapidly growing field aiming at producing food and energy in a sustainable way for our children. This discipline addresses current issues such as climate change, increasing food and fuel prices, starvation, obesity, water pollution, soil erosion, fertility loss, pest control and biodiversity depletion. Novel solutions are proposed based on integrated knowledge from agronomy, soil science, molecular biology, chemistry, toxicology, ecology, economy, philosophy and social sciences. As actual society issues are now intertwined, sustainable agriculture will bring solutions to build a safer world. This book series analyzes current agricultural issues, and proposes alternative solutions, consequently helping all scientists, decision-makers, professors, farmers and politicians wishing to build safe agriculture, energy and food systems for future generations.

**Brewing Microbiology** Mar 30 2024 During the latter part of the last century and the early years of this century, the microbiology of beer and the brewing process played a central role in the development of modern microbiology. An important advance was Hansen's development of pure

culture yeasts for brewery fermentations and the recognition of different species of brewing and wild yeasts. The discovery by Winge of the life cycles of yeasts and the possibilities of hybridization were among the first steps in yeast genetics with subsequent far-reaching consequences. Over the same period the contaminant bacteria of the fermentation industries were also studied, largely influenced by Shimwell's pioneering research and resulting in the improvement of beer quality. Towards the end of the century, the influence of brewing microbiology within the discipline as a whole is far less important, but it retains an essential role in quality assurance in the brewing industry. Brewing microbiology has gained from advances in other aspects of microbiology and has adopted many of the techniques of biotechnology. Of particular relevance are the developments in yeast genetics and strain improvement by recombinant DNA techniques which are rapidly altering the way brewers view the most important microbiological components of the process: yeast and fermentation.

Financial Accounting Feb 02 2022 Financial Accounting is the ideal introductory book to anyone with little prior knowledge or new to this subject area. Its clear writing style and unique international focus builds on the success of the previous editions. This fully updated text uses the International Financial Reporting Standards (IFRS) as its framework to explain key concepts and practices while linking them with contemporary and real world examples from Europe, US and beyond. 'A hugely enjoyable and informative book with an international focus' Eleimon Gonis, University of the West of England, Bristol 'This book will be welcomed by students and academics alike. The text is easy to read and well laid out, the case studies are very helpful, and it is supplemented by a good range of quality supporting material' Christopher Coles, Department of Accounting and Finance, University of Glasgow What's new! Updated to be fully compliant with International Financial Reporting Standards (IFRS) New coverage on ethics and corporate social accounting, creative accounting and groups as reporting entities Expanded discussion of revenue recognition and Islamic accounting and finance Numerous examples taken from European Union (EU) and the wider European Economic Area (EEA), showing the rules and practices of particular European countries or companies New end-of-chapter practice questions with guided solutions The text is ideal for undergraduates and MBA students worldwide, taking a first course in financial accounting. Visit [www.pearsoned.co.uk/alexander](http://www.pearsoned.co.uk/alexander) to find valuable online resources for both students and lecturers, including links to relevant websites, additional practice questions, an instructor's manual and full set of power point slides. David Alexander is Professor Emeritus of Accounting at the University of Birmingham Business School, England. Christopher Nobes is Professor of Accounting at Royal Holloway, University of London, England. He is also Professor at the University of Sydney, and Adjunct Professor at the Norwegian Business School. From 1993 to 2001 he was a member of the board of the International Accounting Standards Committee.

**Persuading with Data** Dec 15 2022 An integrated introduction to data visualization, strategic communication, and delivery best practices. Persuading with Data provides an integrated instructional guide to data visualization, strategic communication, and delivery best practices. Most books on data visualization focus on creating good graphs. This is the first book that combines both explanatory visualization and communication strategy, showing how to use visuals to create effective communications that convince an audience to accept and act on the data. In four parts that proceed from micro to macro, the book explains how our brains make sense of graphs; how to design effective graphs and slides that support your ideas; how to organize those ideas into a compelling presentation; and how to deliver and defend data to an audience. Persuading with Data is for anyone who has to explain analytical results to others. It synthesizes a wide range of skills needed by modern data professionals, providing a

complete toolkit for creating effective business communications. Readers will learn how to simplify in order to amplify, how to communicate data analysis, how to prepare for audience resistance, and much more. The book integrates practitioner and academic perspectives with real-world examples from a variety of industries, organizations, and disciplines. It is accessible to a wide range of readers—from undergraduates to mid-career and executive-level professionals—and has been tested in settings that include academic classes and workplace training sessions.

*Surface Chemistry of Froth Flotation* Jul 22 2023 The process of froth flotation is an outstanding example of applied surface chemistry. It is extensively used in the mining, mineral, metallurgical, and chemical industries for separation and selective concentration of individual minerals and other solids. Substances so concentrated serve as raw materials for producing appropriate metals and chemicals. The importance of flotation in technology is chiefly due to the ease with which it can be made selective and versatile and to the economy of the process. The objective of this book is to review the fundamentals of surface chemistry together with the relevant aspects of organic and inorganic chemistry that—in the opinion of the author—are important ~ control of the froth flotation process. The review updates the information that had been available in books by Sutherland and Wark (1955), Gaudin (1957), Klassen and Mokrousov (1963), and Glembofsky et al. (1963). It emphasizes mainly the surface chemical aspects of the process, leaving other relevant topics such as hydrodynamics, mechanical and electrical technology, circuit design and engineering, operations research, instrumentation technology, modeling, etc., to appropriate specialized treatments.

*The Bayou Strangler* Feb 14 2023 The true story of Louisiana serial killer Ronald Dominique's ten-year murder spree, the men he slayed, and the detectives who hunted him down. In 1997, the bodies of young African American men began turning up in the cane fields of the quiet suburbs of New Orleans. The victims—many of them transient street hustlers—had been brutally bled and strangled, but police had no leads on the killer's identity. The murders continued, leaving southeast Louisiana's gay community rattled and authorities desperate for a break in the case. Then, Detectives Dennis Thornton and Dawn Bergeron came together as task force partners, indefatigable in their decade-long effort to track down the killer. In 2006, DNA evidence finally linked the murders to a suspect: the unassuming Ronald Joseph Dominique, who had lived under the radar for years, working as a pizza deliveryman and meter reader. But who was Ronald Dominique and what led him to commit such heinous crimes? With direct access to the investigation, Dominique's confession, and all of the killer's body dump sites in throughout the state, author Fred Rosen enters the warped mind of a murderer and captures a troubled, disturbing, and broken life. As with the many other serial killers he has covered, including Jeffrey Dahmer (the Milwaukee Cannibal) and Dennis Rader (the BTK Killer), Rosen provides a horrifying and fascinating account of the lengths to which a bloodthirsty monster will go to lure and brutalize his victims.

*The ABC's of Calculus* Dec 03 2021 The ABCs of Calculus guides students in their quest towards understanding Calculus, and ultimately towards solving a variety of Calculus problems. Understanding that diversity of students in the Calculus classroom, the material in the text is presented through verbal, theoretical, practical, numerical and geometrical approaches, in order to satisfy varying learning styles. The text provides a much valued review of basic material while working towards a goal that includes the fostering of a feeling for what Calculus is, what it does, and how you can correctly solve the problems it generates. With many completely solved examples, and hundreds of opportunities to apply concepts through problems, students will quickly build their confidence, and ultimately succeed in Calculus.

*PoC or GTFO* Jul 02 2024 This highly anticipated print collection gathers articles published in the much-loved *International Journal of Proof-of-Concept or Get The Fuck Out*. PoC|GTFO follows in the tradition of *Phrack* and *Uninformed* by publishing on the subjects of offensive security research, reverse engineering, and file format internals. Until now, the journal has only been available online or printed and distributed for free at hacker conferences worldwide. Consistent with the journal's quirky, biblical style, this book comes with all the trimmings: a leatherette cover, ribbon bookmark, bible paper, and gilt-edged pages. The book features more than 80 technical essays from numerous famous hackers, authors of classics like "Reliable Code Execution on a Tamagotchi," "ELFs are Dorky, Elves are Cool," "Burning a Phone," "Forget Not the Humble Timing Attack," and "A Sermon on Hacker Privilege." Twenty-four full-color pages by Ange Albertini illustrate many of the clever tricks described in the text.

**Picking Winners** Apr 06 2022 A classic guide to handicap strategies in the field of thoroughbred racing Just as football evolved with the introduction of the forward pass and basketball with the development of the jump shot, so too was handicapping forever changed by the use of speed figures--and it all started with Andrew Beyer. With a foreword discussing the changes that have swept horse racing since the book's original publication in 1975, *Picking Winners* is essential reading both for serious horseplayers and curious amateurs.

*The Sick-A-Bed Lady* May 20 2023 *The Sick-a-Bed Lady* By Eleanor Hallowell Abbott Fans of charming domestic dramas in the vein of Louisa May Alcott's *Little Women* will love Eleanor Hallowell Abbott's short story collection *The Sick-a-Bed Lady*. Filled with industrious heroines, resilient families, and budding romance, these inspiring tales provide a delightful diversion for readers young and old. We are delighted to publish this classic book as part of our extensive Classic Library collection. Many of the books in our collection have been out of print for decades, and therefore have not been accessible to the general public. The aim of our publishing program is to facilitate rapid access to this vast reservoir of literature, and our view is that this is a significant literary work, which deserves to be brought back into print after many decades. The contents of the vast majority of titles in the Classic Library have been scanned from the original works. To ensure a high quality product, each title has been meticulously hand curated by our staff. Our philosophy has been guided by a desire to provide the reader with a book that is as close as possible to ownership of the original work. We hope that you will enjoy this wonderful classic work, and that for you it becomes an enriching experience.

Yavneh Nov 13 2022 In the words of late Professor Moshe Kochavi, the Philistine repository pit at Yavneh is the kind of discovery made only

once every fifty years. It is the richest repository pit ever found from Bronze and Iron Ages Israel/Palestine, containing thousands of cultic finds originating from a temple, including an unprecedented number - more than a hundred - of cult stands (so-called 'architectural models') carrying rich figurative art, dozens of fire-pans, chalices and other objects. The present volume includes the full publication of the excavation, the stratigraphy, the cult stands and the figures detached from cult stands, several clay and stone altars and some pottery vessels related to burning of plant material, most likely incense. This exceptional book raises a host of highly important and intriguing questions. Is this a favissa, or even a genizah? Why are many cult stands badly broken, while some are intact - were cult stands broken on purpose? What is the explanation for the unique stratigraphy and for the layer of gray ash in the pit - was fire kindled inside as part of a ritual? How do we know that these finds are Philistine? Are they part of the 'furniture' of the temple or objects dedicated by worshippers as votives? Do the figures on the cult stands represent mortal beings, or divinities? If divinities, can we relate them with Biblical or extra-biblical data on the gods of the Philistines? What was the function/s of cult stands? Were they models of buildings, supports for images, offering tables, altars, or perhaps incense burners? Why are female figures dominant, while male figures are virtually absent? In discussing such topics, Yavneh I treats issues that are central to many fields of study: religion and cult in Iron Age Israel/Palestine; the history and archaeology of the Philistines and their 'western' relations; Near Eastern iconography, the meaning of cult stands/architectural models and the understanding of votive objects and of repository pits in general. Literally salvaged from the teeth of a bulldozer, these rare finds are now published. Generations of scholars will discuss and reinterpret them - there is no 'final word' for such finds and hence, this final excavation volume is not an end, but a beginning.

**Operating Systems** Jan 04 2022 This is a practical manual on operating systems, which describes a small UNIX-like operating system, demonstrating how it works and illustrating the principles underlying it. The relevant sections of the MINIX source code are described in detail, and the book has been revised to include updates in MINIX, which initially started as a v7 unix clone for a floppy-disk only 8088. It is now aimed at 386, 486 and pentium machines, and is based on the international posix standard instead of on v7. Versions of MINIX are now also available for the Macintosh and SPARC.

**Building a State in Apache Land** Oct 25 2023 The book "" Building a State in Apache Land "" has been considered important throughout the human history, and so that this work is never forgotten we have made efforts in its preservation by republishing this book in a modern format for present and future generations. This whole book has been reformatted, retyped and designed. These books are not made of scanned copies and hence the text is clear and readable.

**Computer-Assisted Research in the Humanities** Mar 18 2023 Computer-Assisted Research in the Humanities describes various computer-assisted research in the humanities and related social sciences. It is a compendium of data collected between November 1966 and May 1972 and published in *Computer and the Humanities*. The book begins with an analysis of language teaching texts including the DOVACK system, a program used for remedial reading instruction. It then discusses the objectives, types of computer used, and status of the Bibliographic On-line Display (BOLD), semiotic systems, augmented human intellect program, automatic indexing, and similar research. The remaining chapters present computer-assisted research on language and literature, philosophy, social sciences, and visual arts. Students who seek a single reference

work for computer-assisted research in the humanities will find this book useful.

*Physics of Semiconductor Devices* Jul 10 2022 The Third Edition of the standard textbook and reference in the field of semiconductor devices

This classic book has set the standard for advanced study and reference in the semiconductor device field. Now completely updated and reorganized to reflect the tremendous advances in device concepts and performance, this Third Edition remains the most detailed and exhaustive single source of information on the most important semiconductor devices. It gives readers immediate access to detailed descriptions of the underlying physics and performance characteristics of all major bipolar, field-effect, microwave, photonic, and sensor devices. Designed for graduate textbook adoptions and reference needs, this new edition includes: A complete update of the latest developments New devices such as three-dimensional MOSFETs, MODFETs, resonant-tunneling diodes, semiconductor sensors, quantum-cascade lasers, single-electron transistors, real-space transfer devices, and more Materials completely reorganized Problem sets at the end of each chapter All figures reproduced at the highest quality Physics of Semiconductor Devices, Third Edition offers engineers, research scientists, faculty, and students a practical basis for understanding the most important devices in use today and for evaluating future device performance and limitations. A Solutions Manual is available from the editorial department.

**The F.A.T. Manual** Jun 01 2024 In more than five years of activity, the Free Art and Technology Lab produced an impressive series of projects, all developed with open source software, shared online and documented in a way that allows everybody to copy, improve, abuse or simply use them. This approach situates F.A.T. Lab in a long tradition of DIY, processual, sharable artistic practices based on instructionals, and reveals a democratic idea of art where Fluxus scores meet hacker culture (and rap music). The F.A.T. Manual is a selection of more than 100 projects, done in the belief that printing these bits on paper will allow them to spread in a different way, infiltrate other contexts, and germinate. An archive, a catalogue, a user manual and a software handbook. F.A.T. Lab is an organization dedicated to enriching the public domain through the research and development of creative technologies and media. Co-produced by Link Editions and MU in collaboration with XPO Gallery, Paris.
